

Automate Your Azure Cloud Career with Terraform

Master the skills that 80% of cloud jobs now require.

Swipe to boost your interview success!

SANGEETHA

@CAREERBYTECODE

Why Terraform for Azure?

Declarative

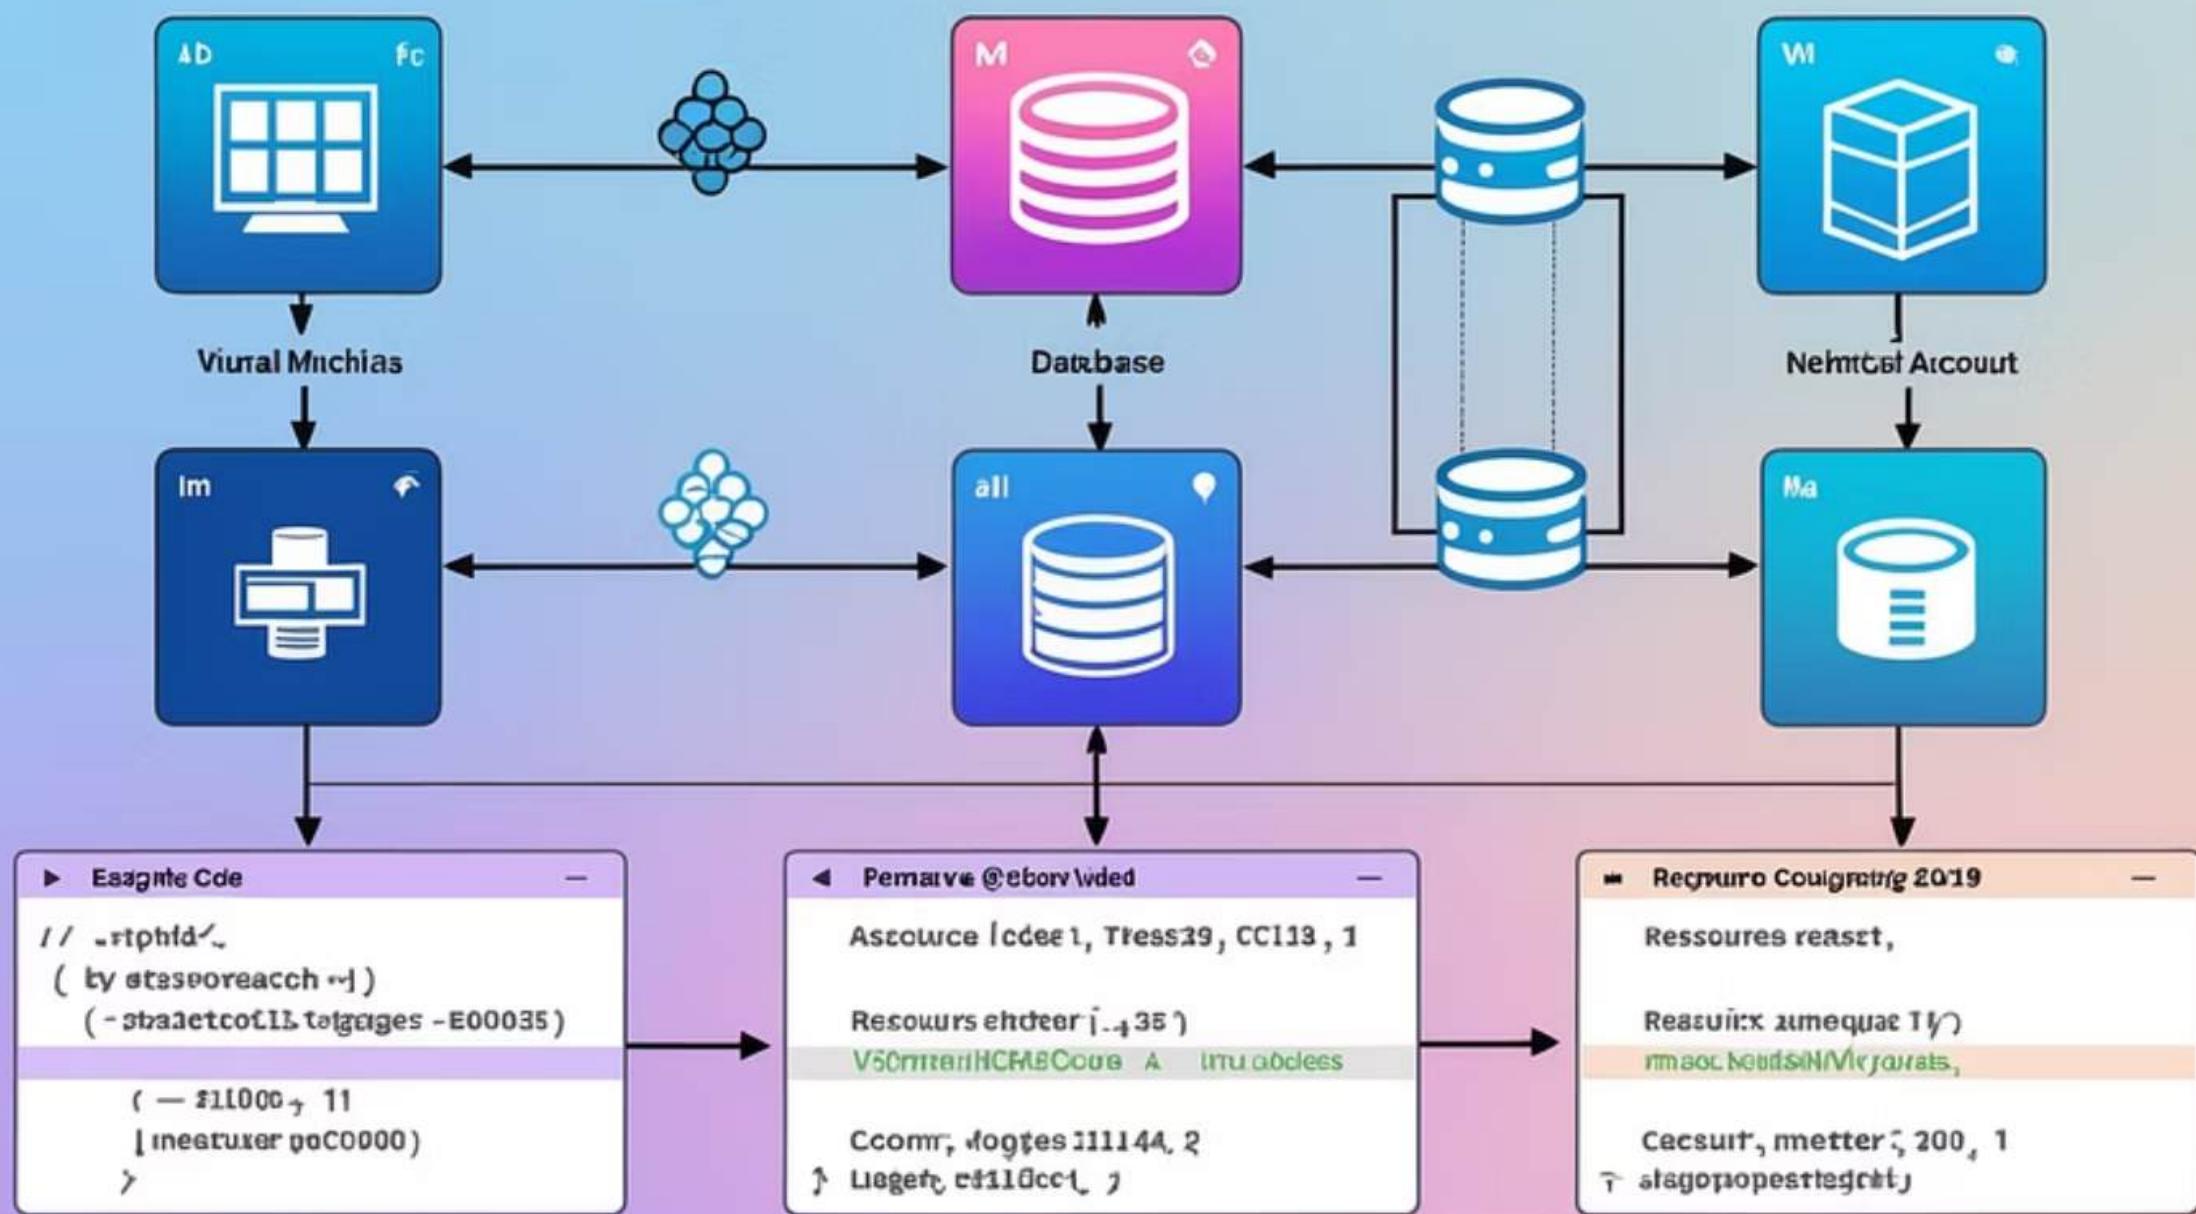

Define infrastructure in code and let Terraform handle the rest

Industry Standard

Used by 45% of Fortune 500 companies for cloud automation

Multi-Cloud Support

One tool to manage resources across different cloud providers

Azure Resource Group Automation

One Command

Create entire environments consistently: terraform apply

Automatic Tagging

Apply standardized tags for better resource management

Access Control

Manage permissions and billing boundaries programmatically

Terraform State Management

Remote State

Store in Azure Storage for team collaboration with locking

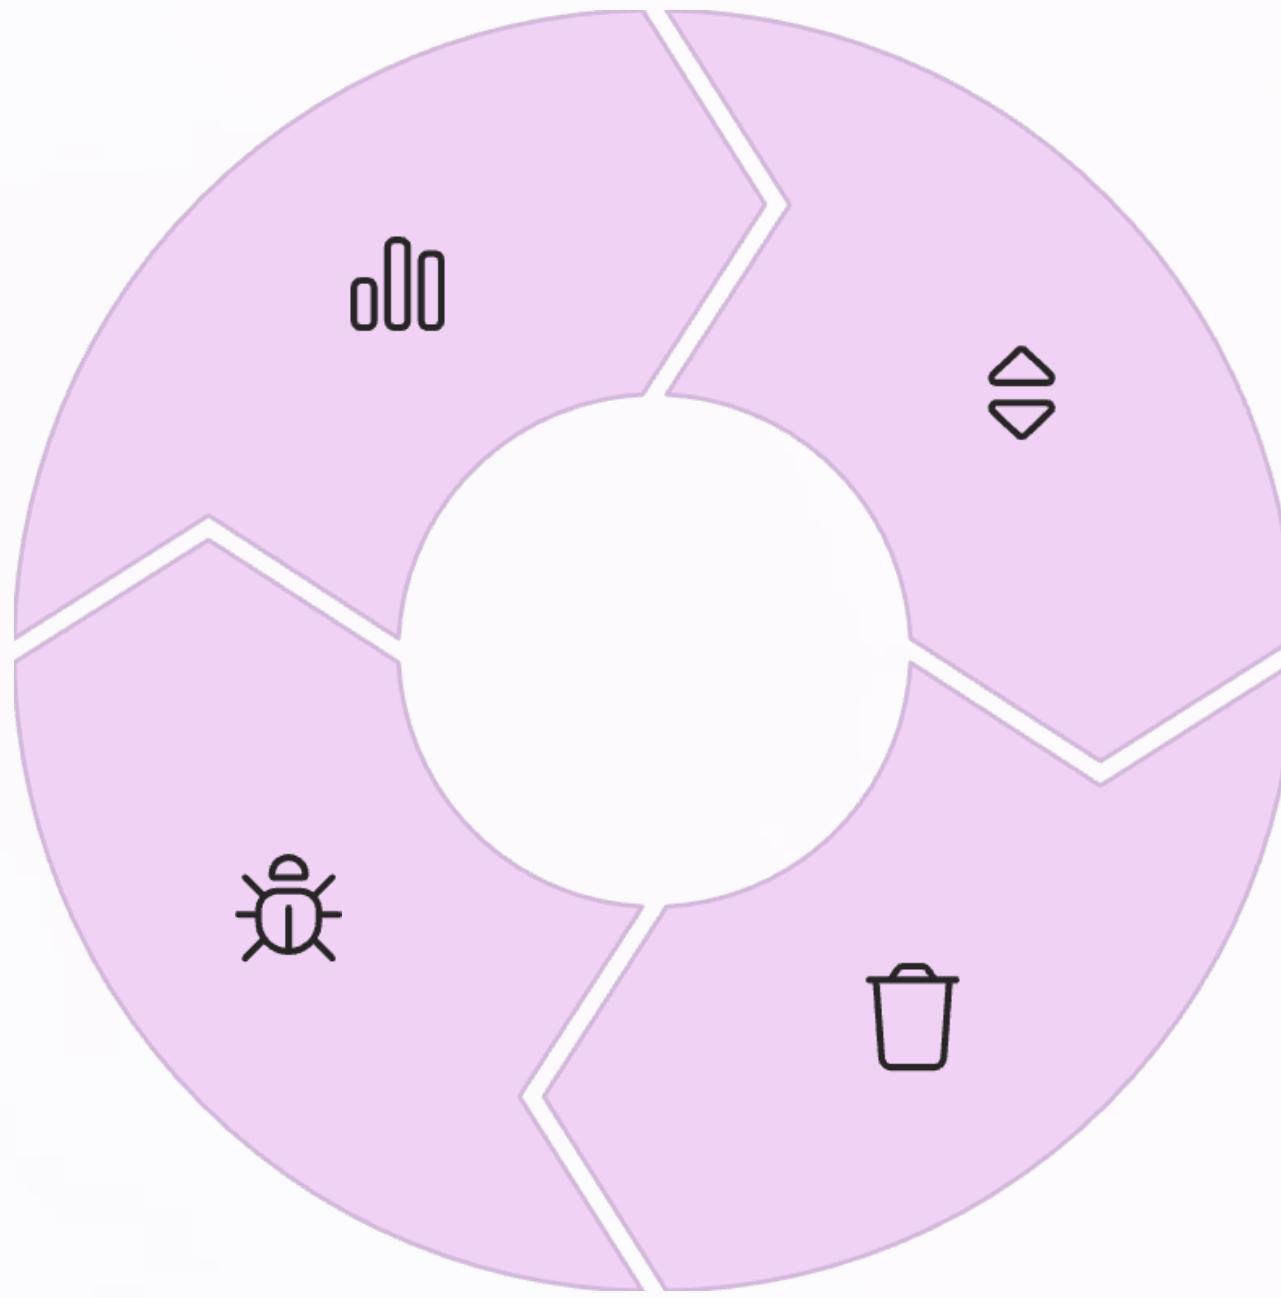

State Tracking

Monitor all infrastructure changes over time with versioning

Conflict Prevention

Automatic locking prevents concurrent modification issues

Resource Dependencies

Auto-Detection

Terraform identifies dependencies between resources

Proper Ordering

Resources created in correct sequence every time

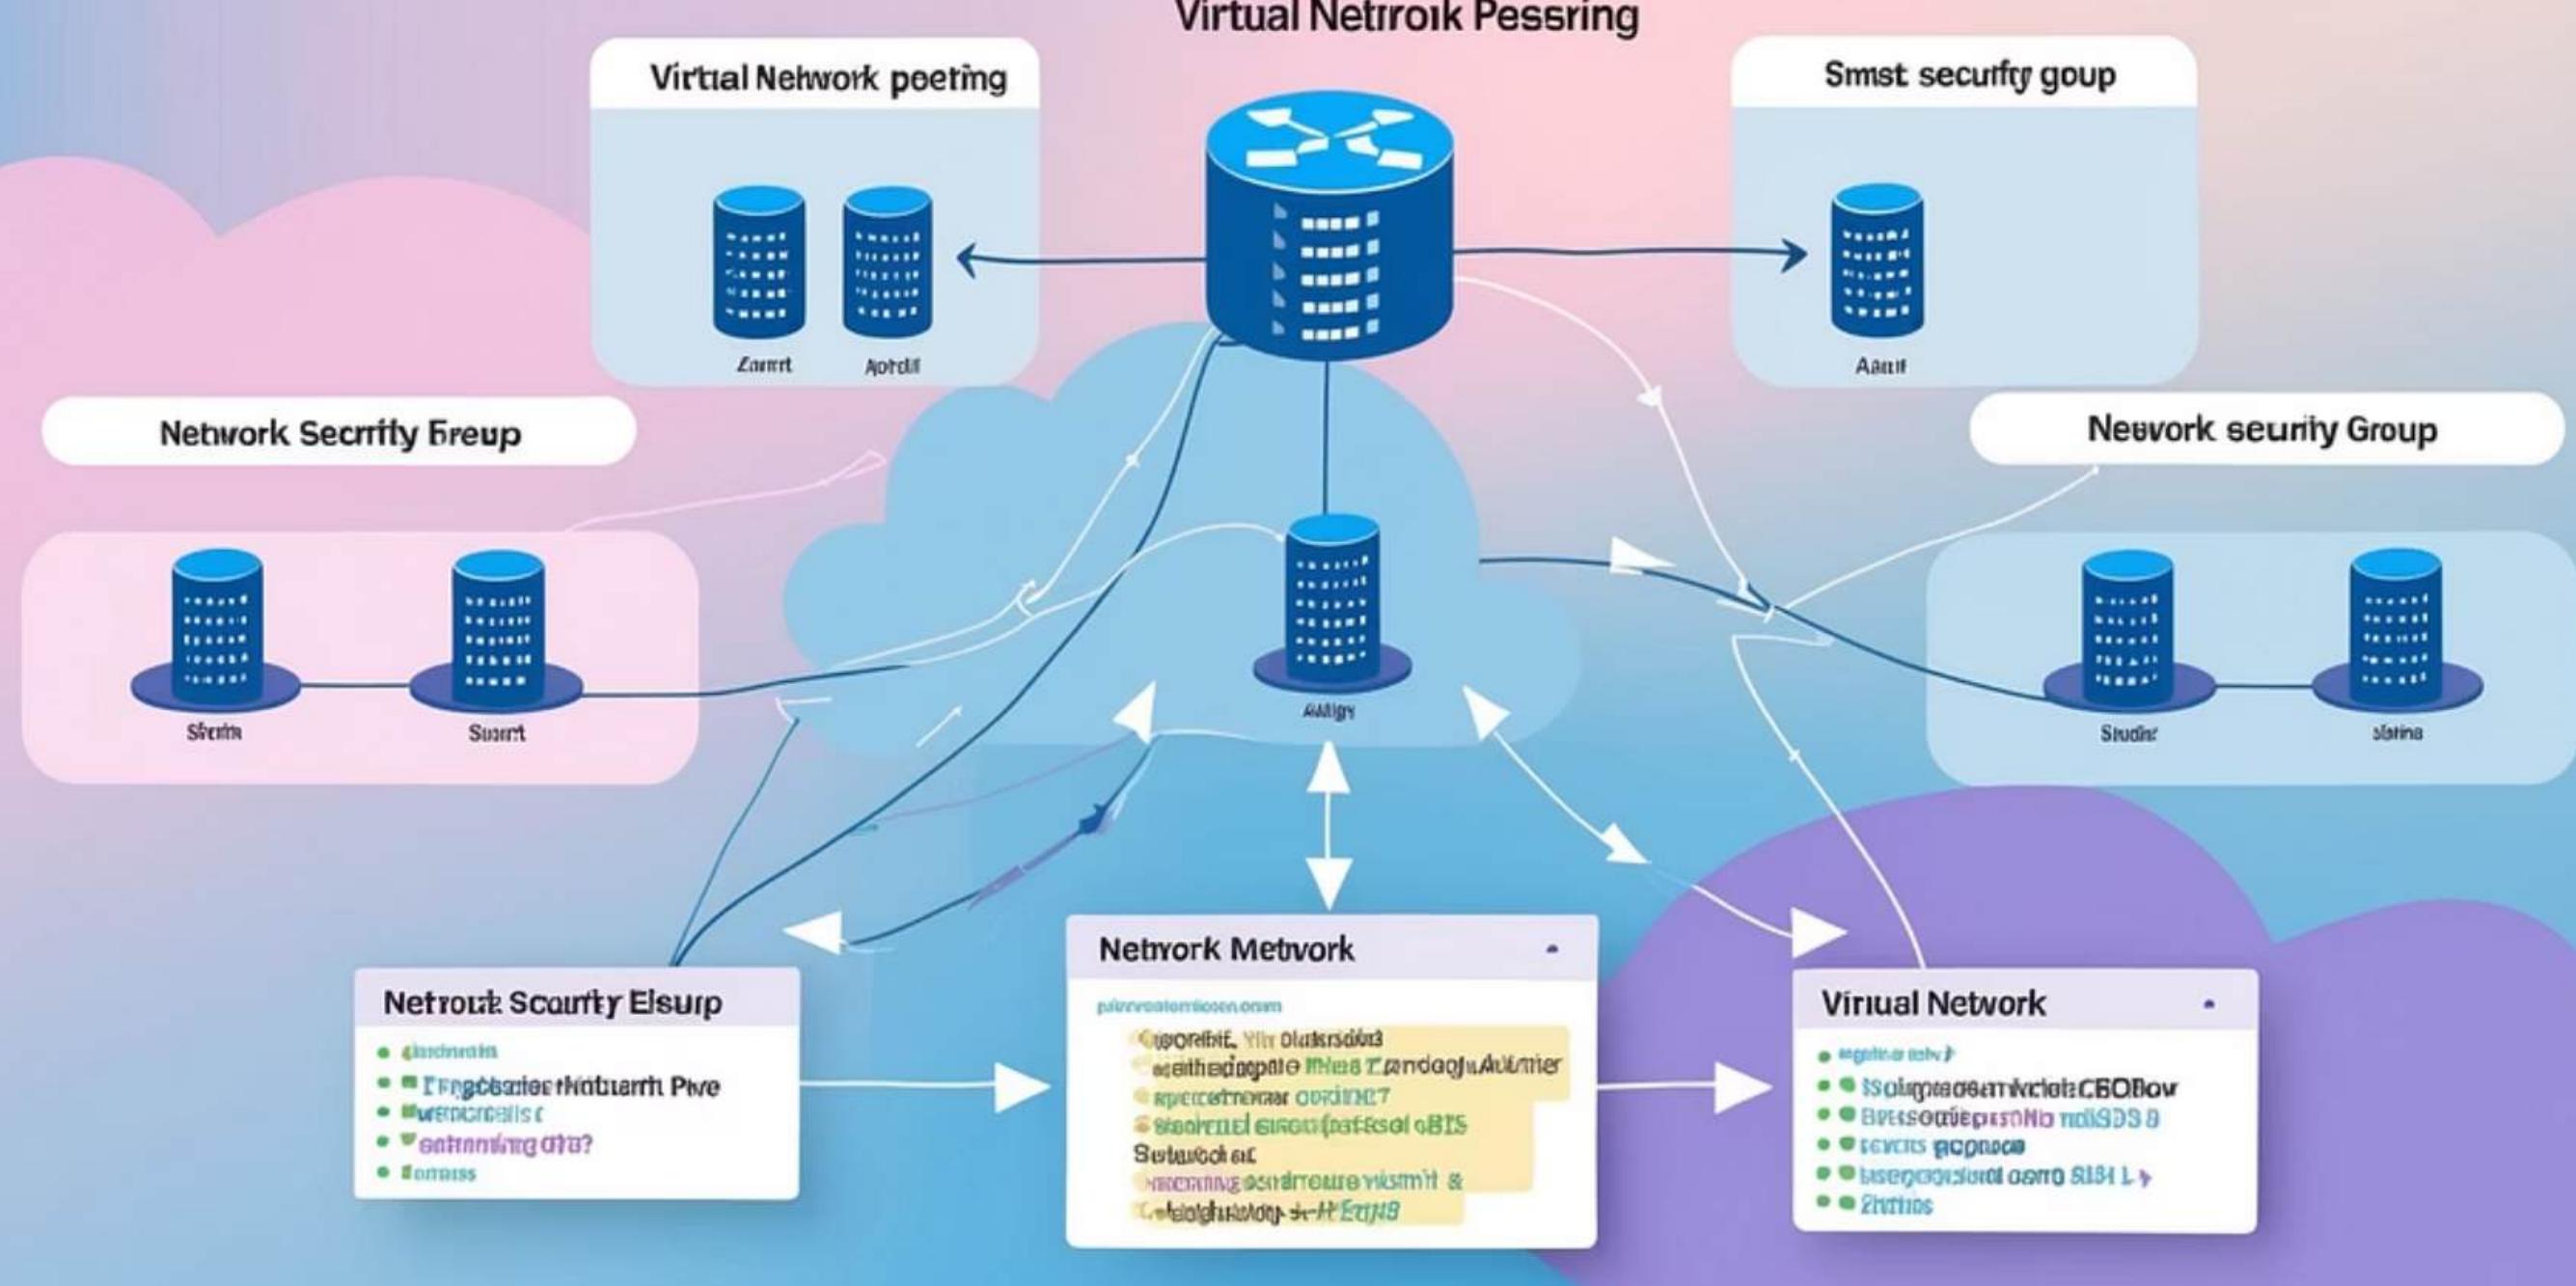

Clean Deletion

Resources destroyed in reverse order to prevent errors

Error Reduction

Reduces manual coordination errors by 60%

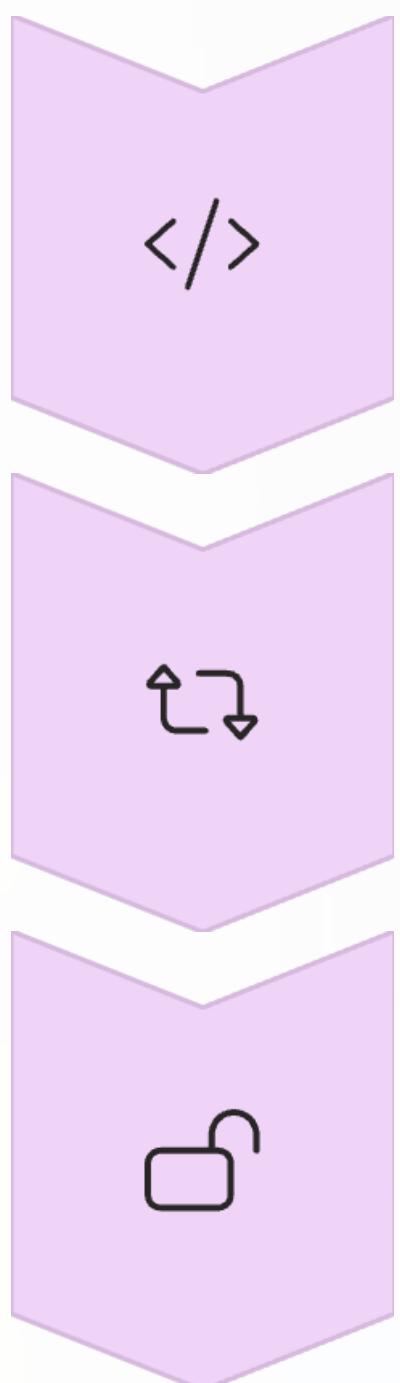

Virtual Networks in Azure

```
resource "azurerm_virtual_network" "example" {
    name          = "example-network"
    location      = "East US"
    resource_group_name =
    azurerm_resource_group.example.name
    address_space  = ["10.0.0.0/16"]
}
```

Define complete networking topology with subnets, routes, and security groups in a few lines of code.

Storage Account Automation

Define in Code

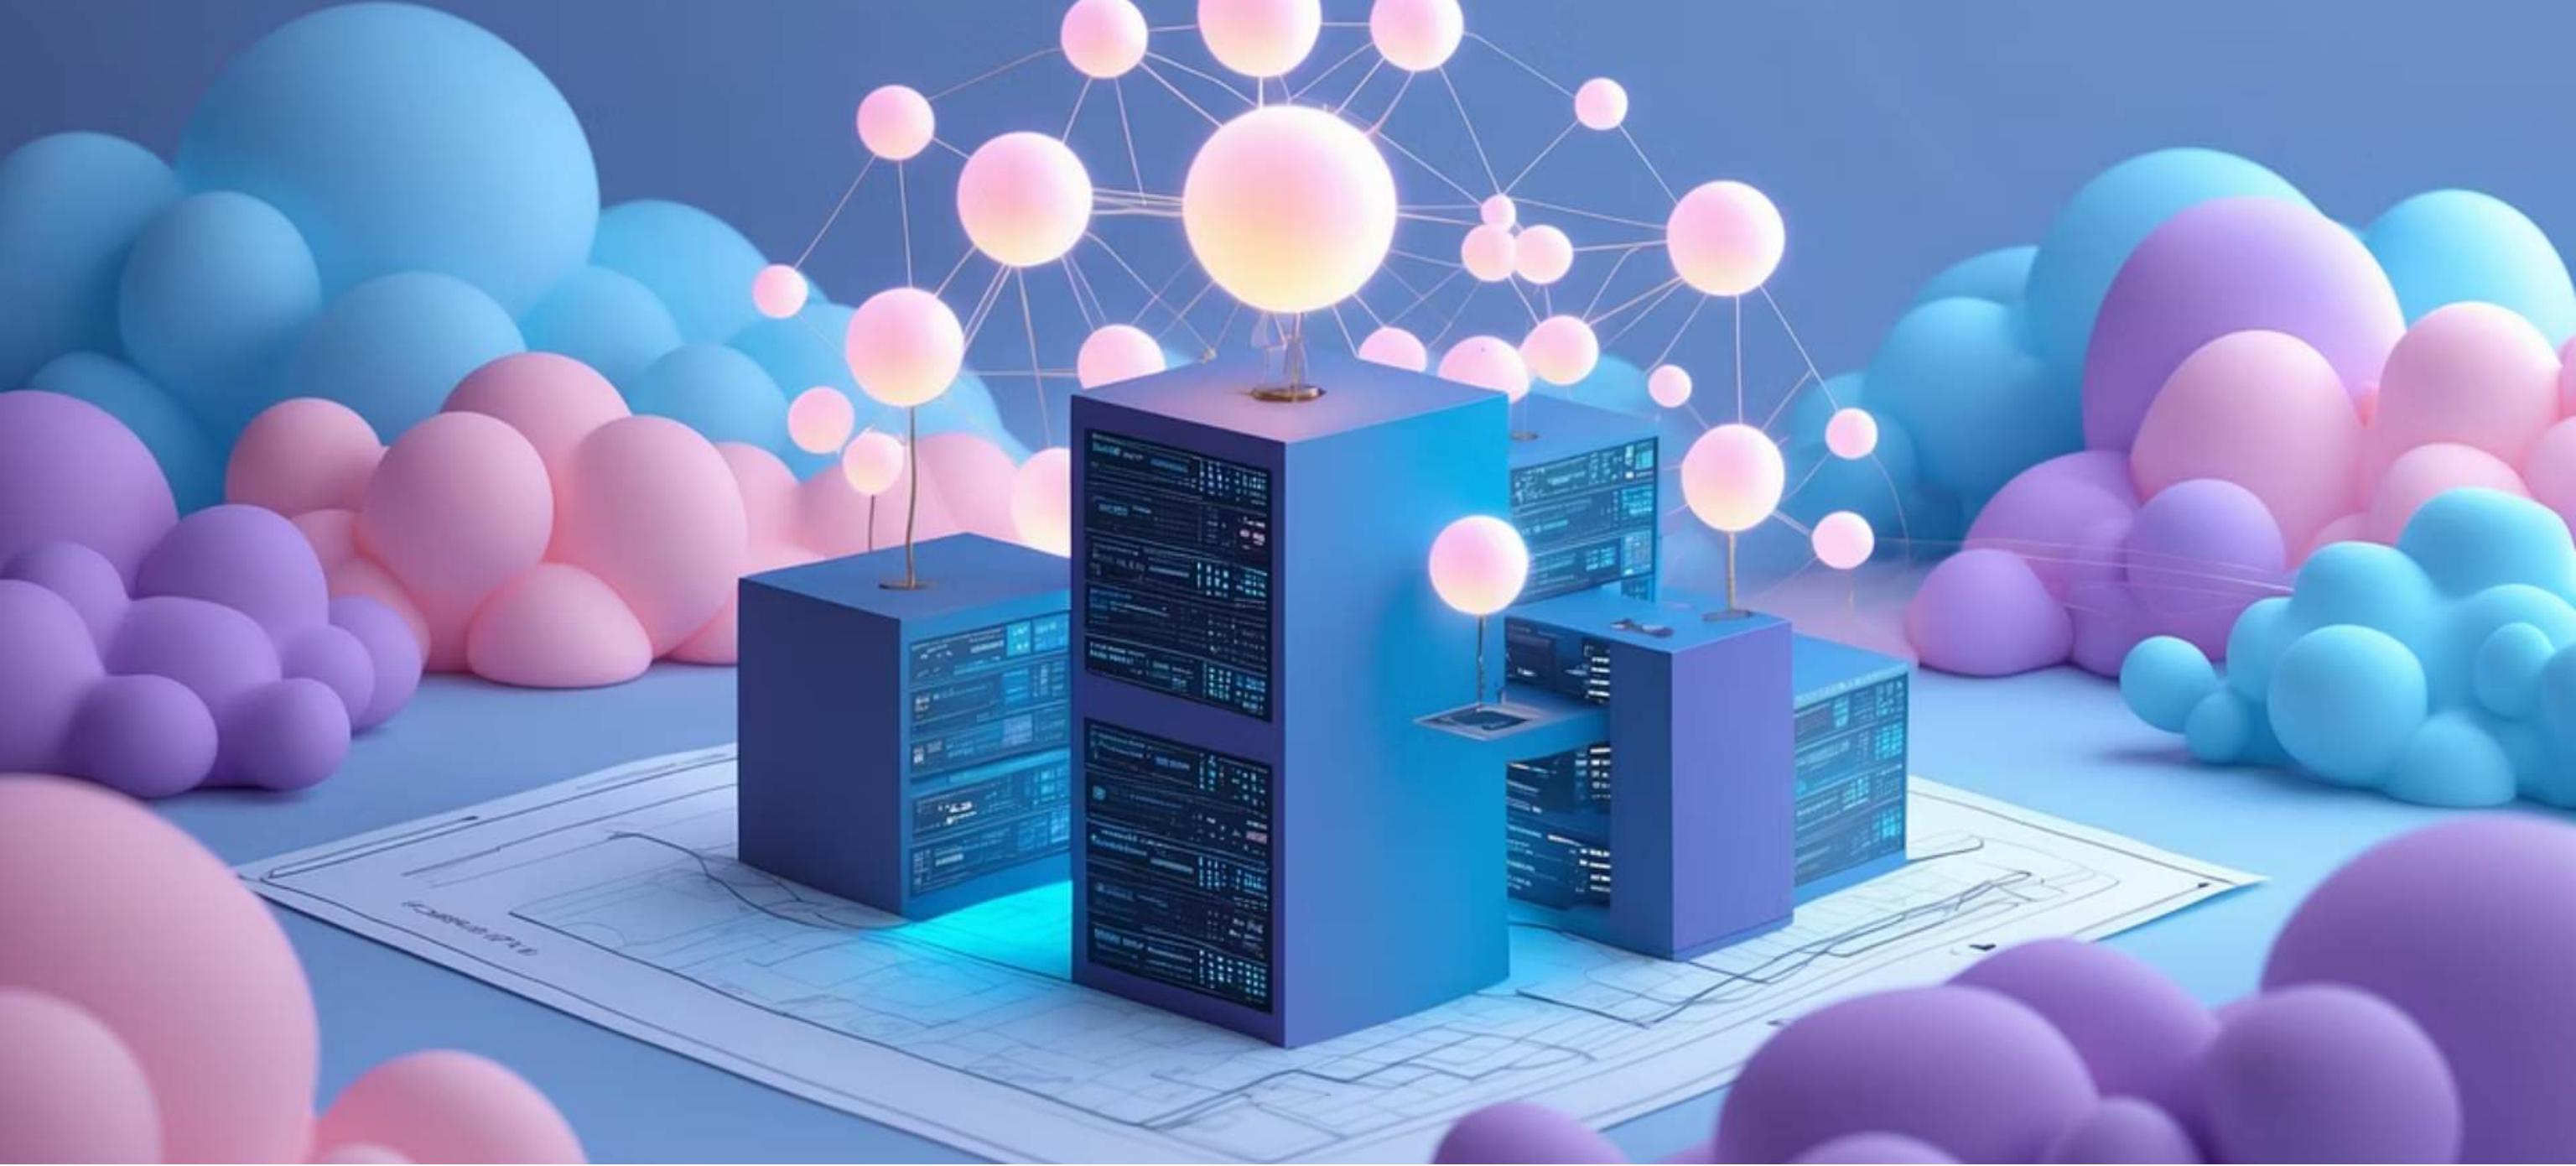

Configure storage with replication policies

Set Lifecycle

Automate data transition between tiers

Enable Security

Configure encryption with managed keys

VM Deployment Automation

```
resource "azurerm_linux_virtual_machine" "example" {
    count          = 3
    name           = "example-vm-${count.index}"
    resource_group_name =
    azurerm_resource_group.example.name
    location       = "East US"
    size           = "Standard_DS1_v2"
    # Additional configuration...
}
```

Deploy multiple identical VMs with the count parameter for horizontal scaling.

AKS Cluster Automation

Production-Ready

Deploy complete Kubernetes clusters with node pools

Network Integration

Configure CNI networking and service endpoints

Security Policies

Apply network policies and RBAC automatically

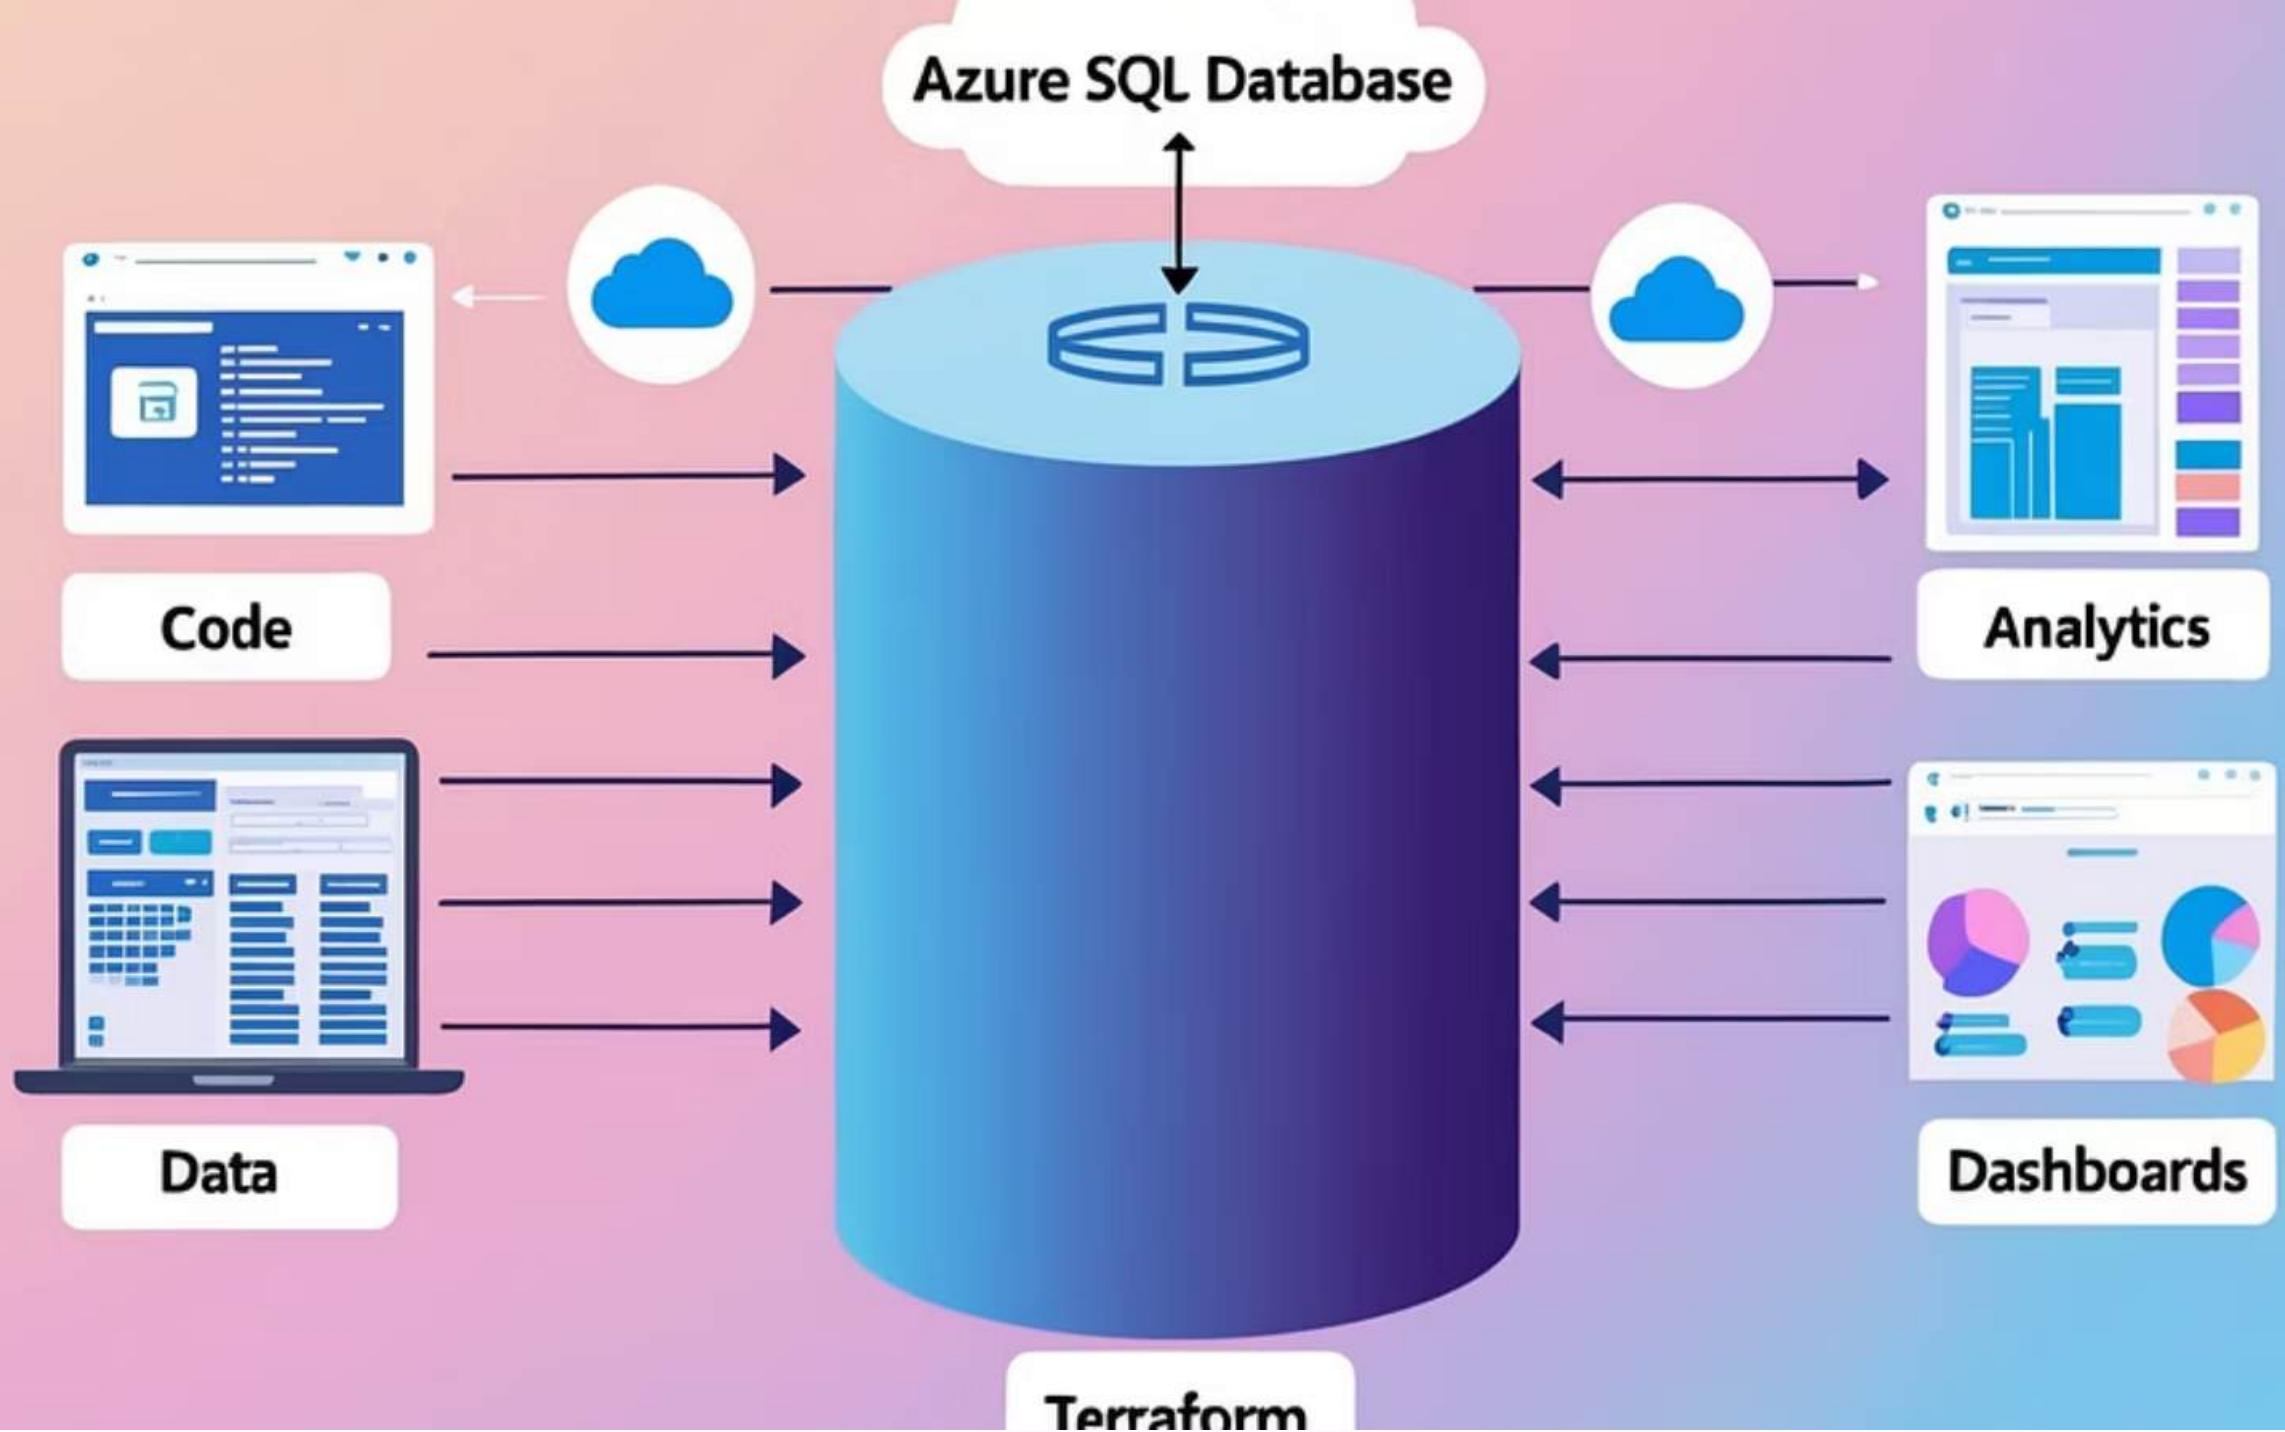

Automation Account Setup

```
resource "azurerm_automation_account" "example" {
    name          = "example-automation"
    location      = "East US"
    resource_group_name = azurerm_resource_group.example.name
    sku_name      = "Basic"

    identity {
        type = "SystemAssigned"
    }
}
```

Set up Azure Automation accounts with proper identity configuration for runbooks.

SQL Database Automation

Performance Tiers

Configure DTUs or vCores based on workload needs

Geo-Replication

Set up automatic failover groups for disaster recovery

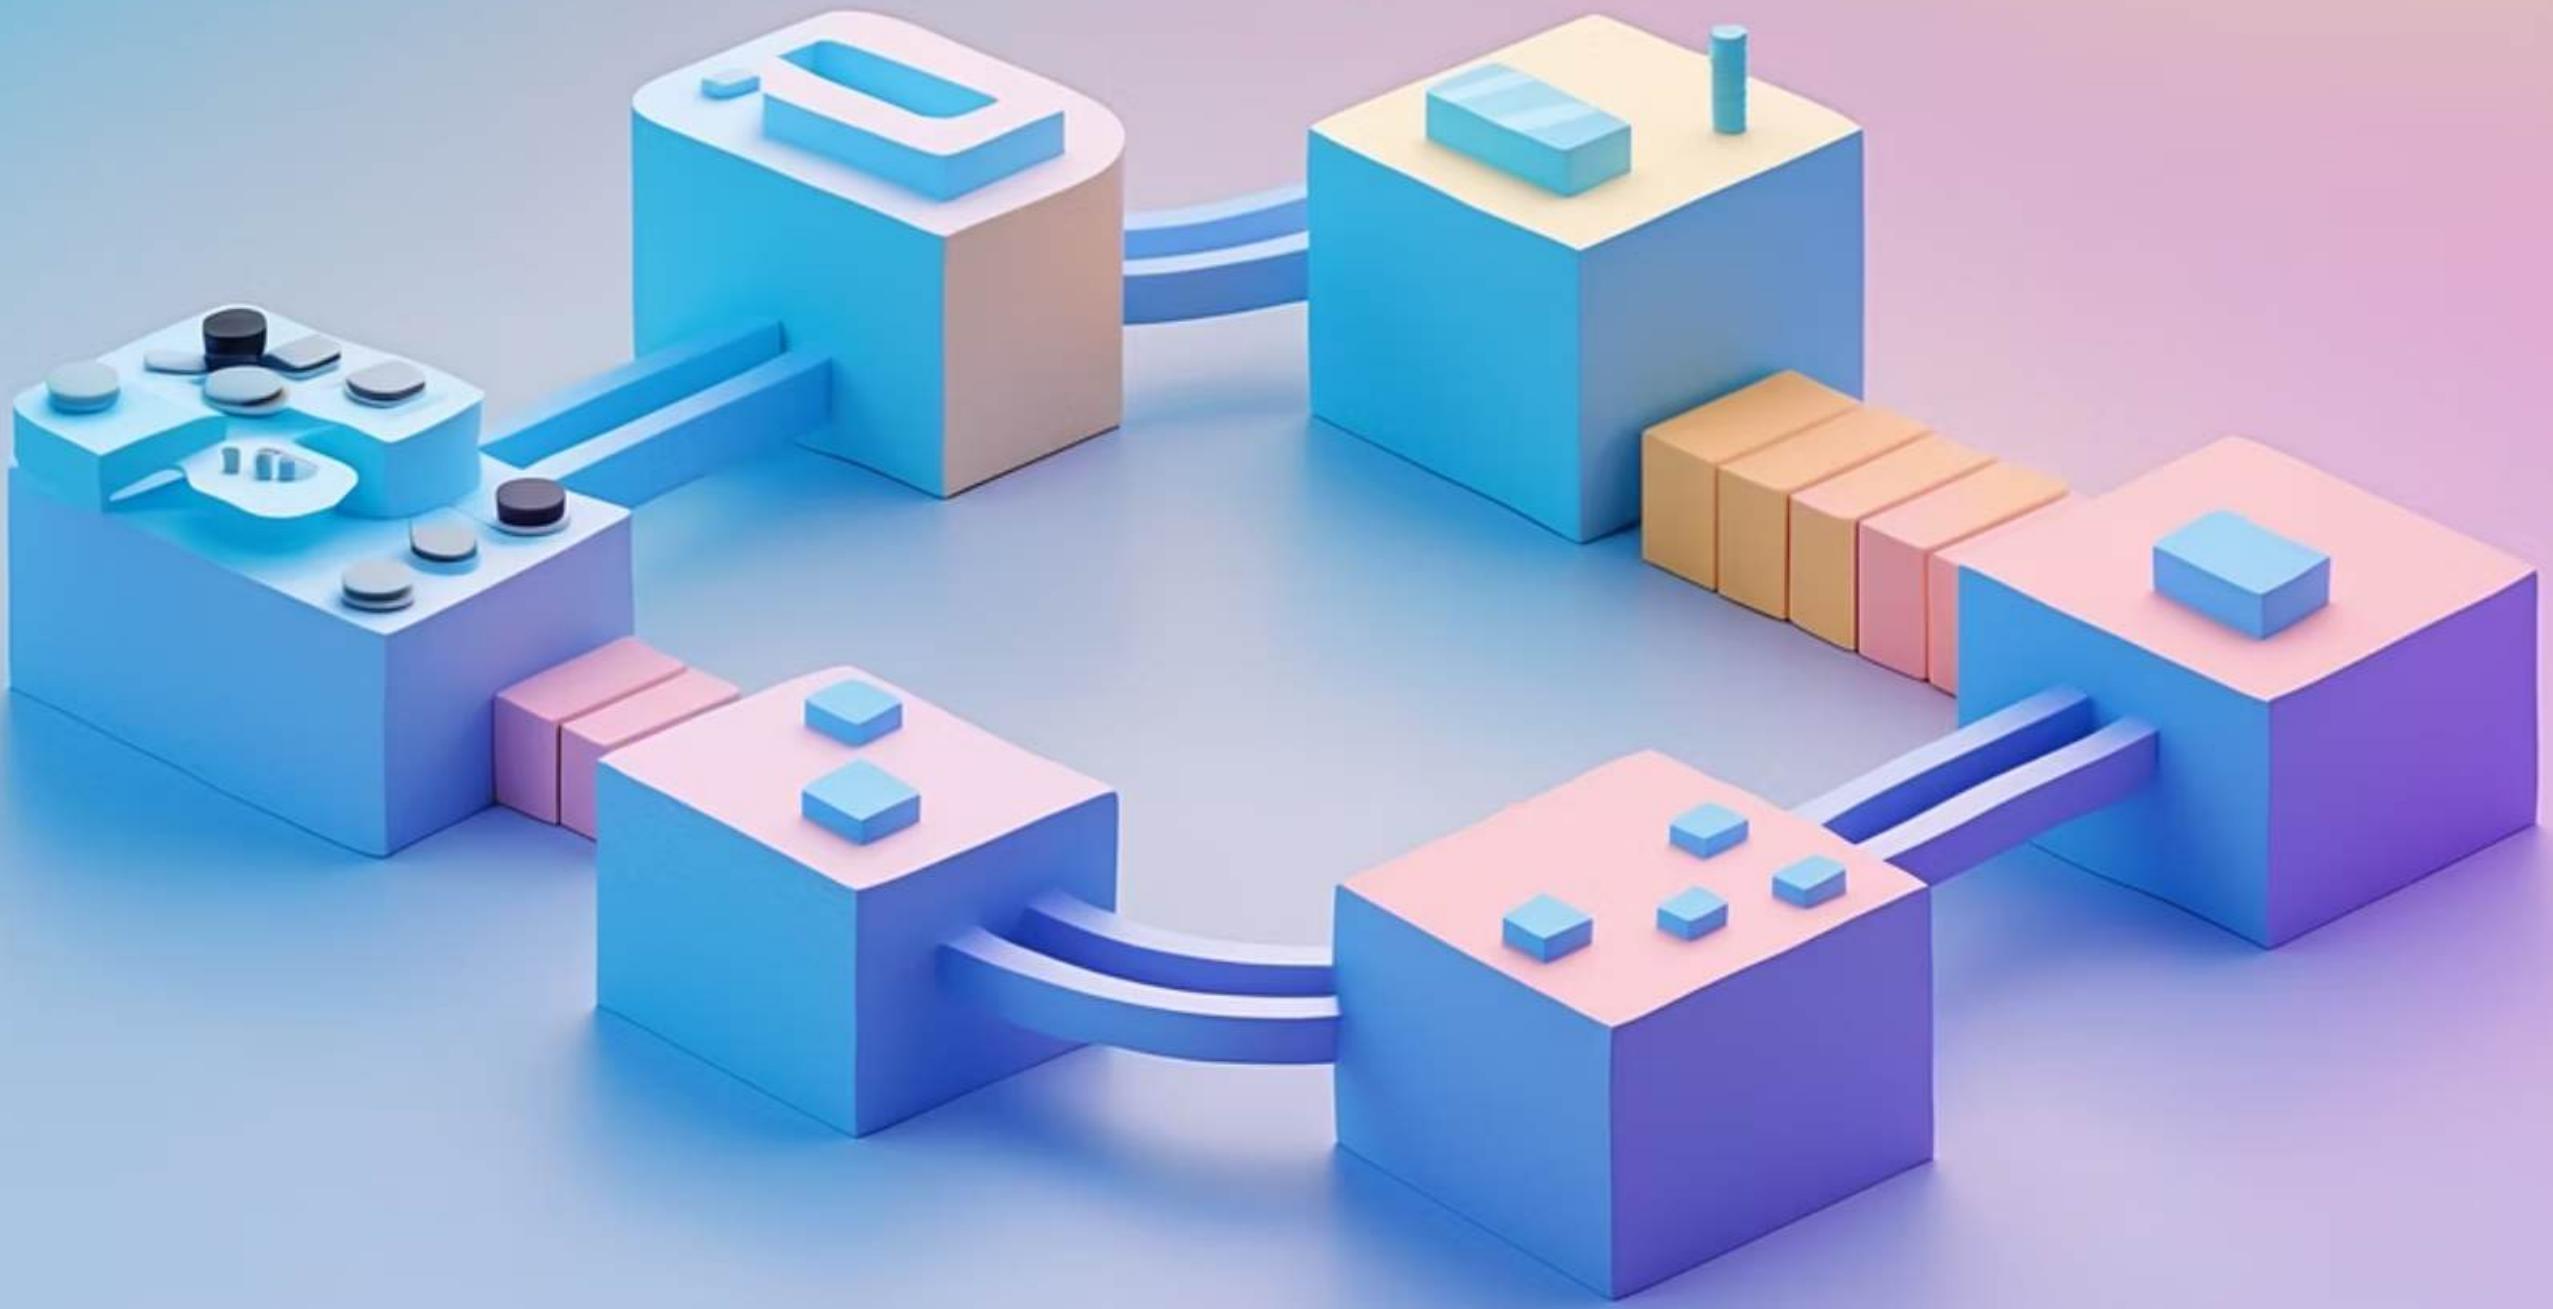

Security Policies

Apply firewall rules and auditing configuration

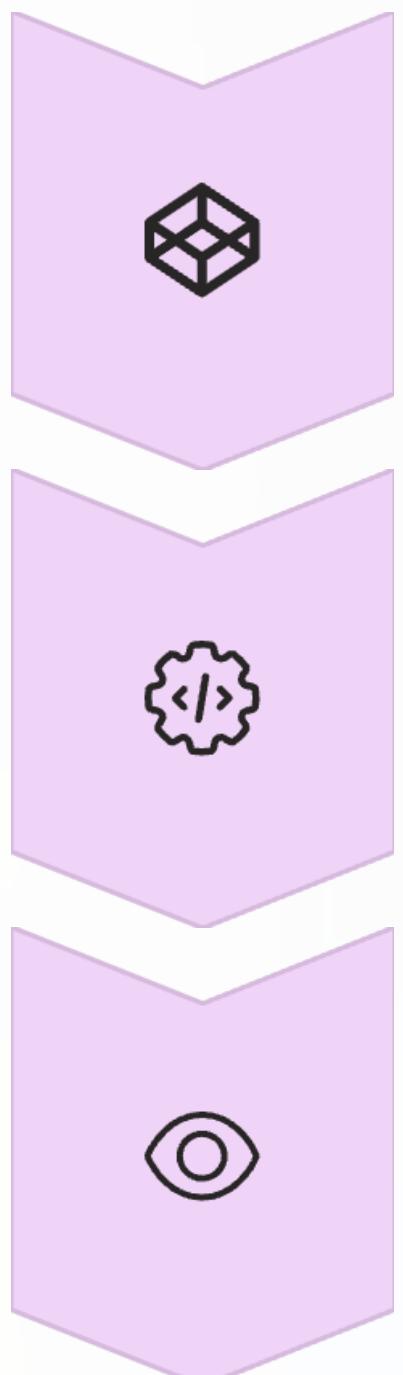

App Service Deployment

```
resource "azurerm_app_service" "example" {  
    name          = "example-app"  
    location      = "East US"  
    resource_group_name =  
        azurerm_resource_group.example.name  
    app_service_plan_id =  
        azurerm_app_service_plan.example.id  
  
    site_config {  
        dotnet_framework_version = "v5.0"  
        always_on               = true  
    }  
}
```

Deploy web apps with proper configurations and deployment slots for zero-downtime updates.

Function Apps Automation

Infrastructure

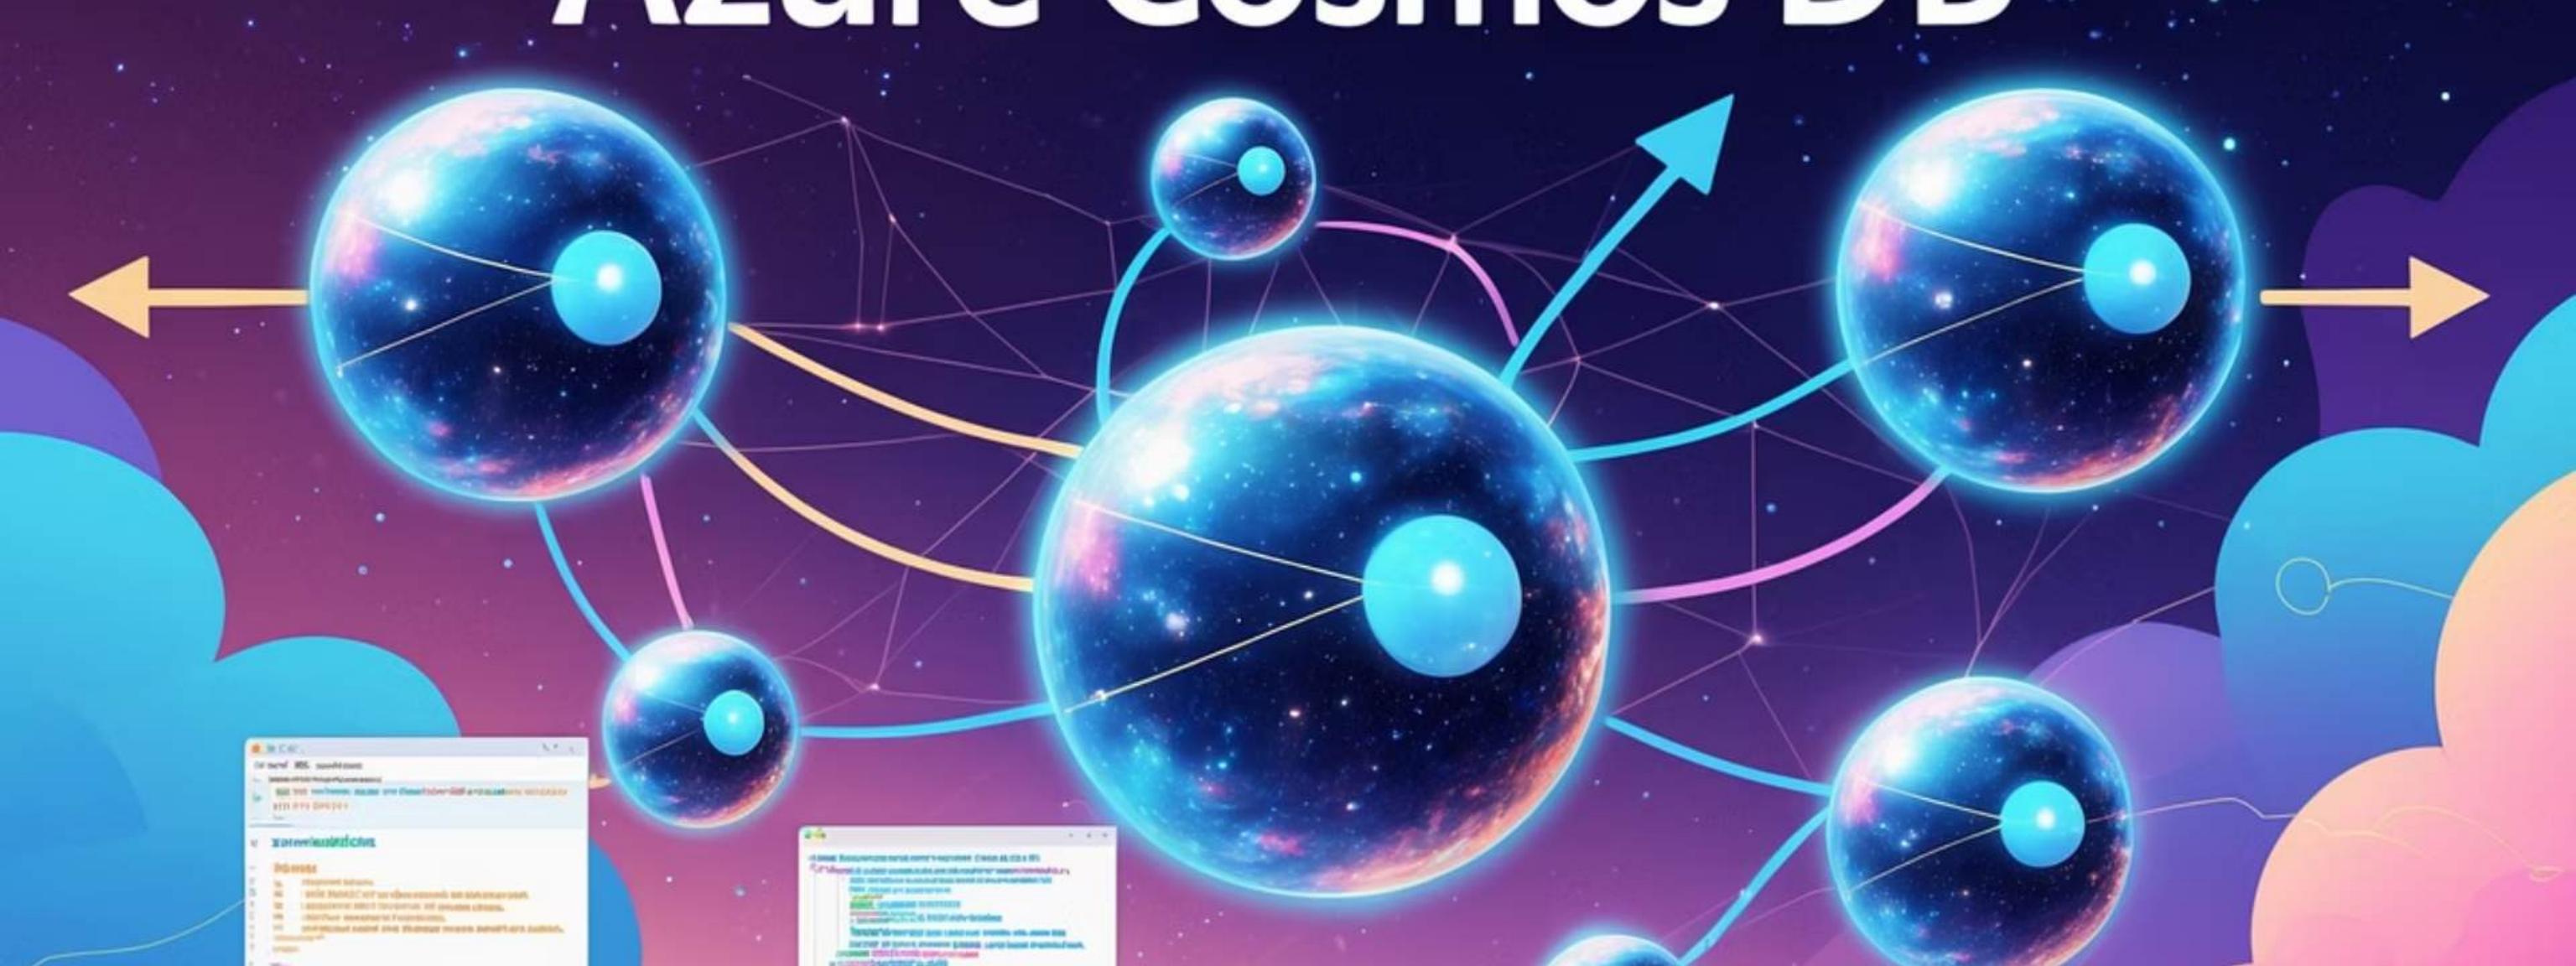

Deploy serverless function app resources

Configuration

Set runtime stack and scaling options

Monitoring

Configure Application Insights integration

Cosmos DB Deployment

```
resource "azurerm_cosmosdb_account" "example" {
    name                  = "example-cosmosdb"
    location              = "East US"
    resource_group_name   = azurerm_resource_group.example.name
    offer_type             = "Standard"
    kind                  = "GlobalDocumentDB"

    consistency_policy {
        consistency_level = "Session"
    }

    geo_location {
        location      = "East US"
        failover_priority = 0
    }
}
```

Create globally distributed databases with proper consistency levels.

Key Vault Secrets Management

Secure Storage

Store credentials securely in Azure Key Vault

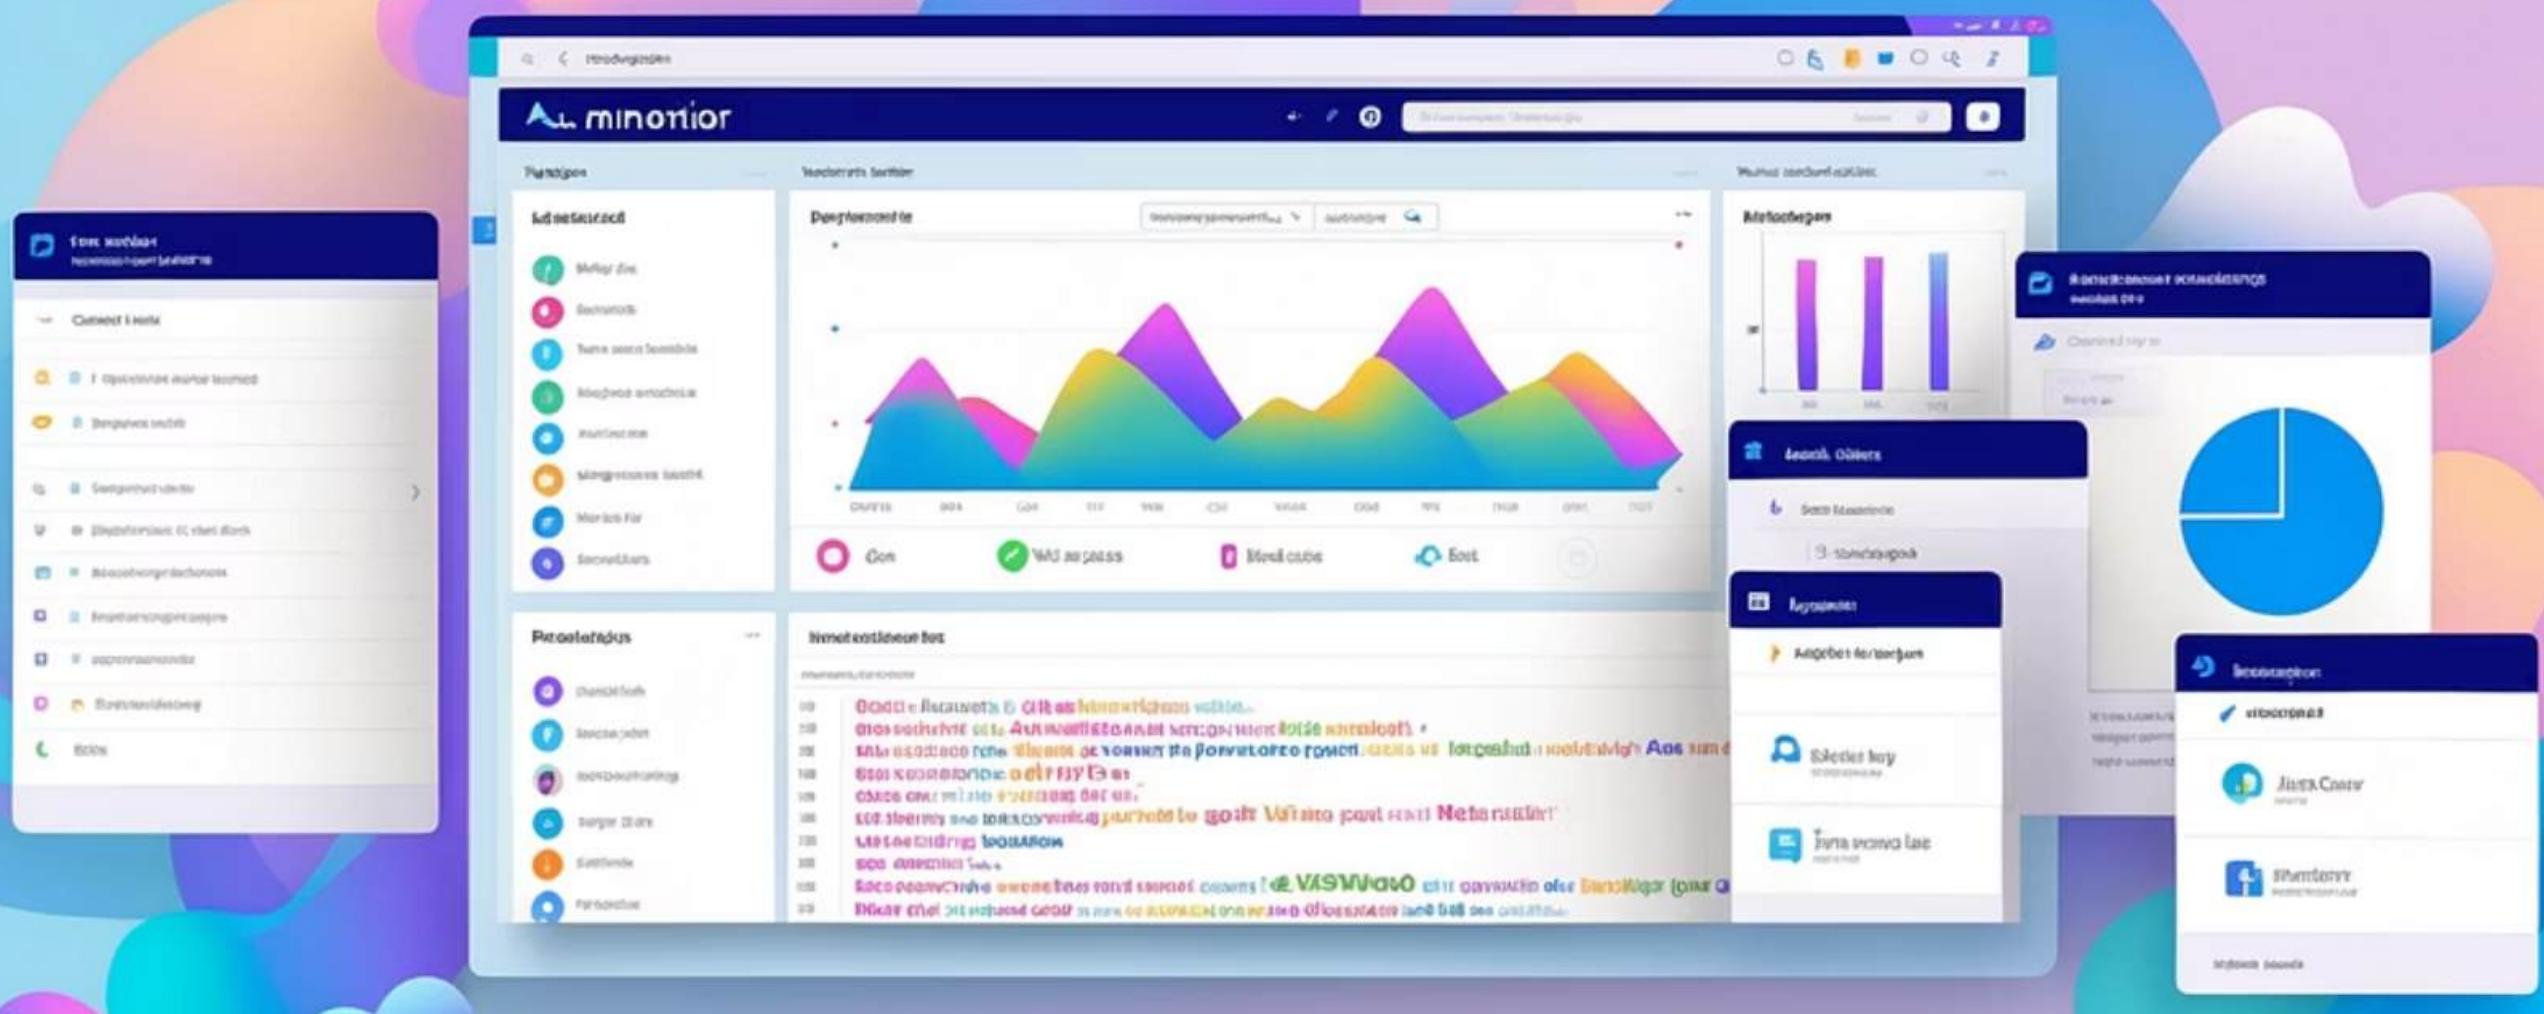

Automatic Rotation

Configure policies for key and certificate rotation

Resource References

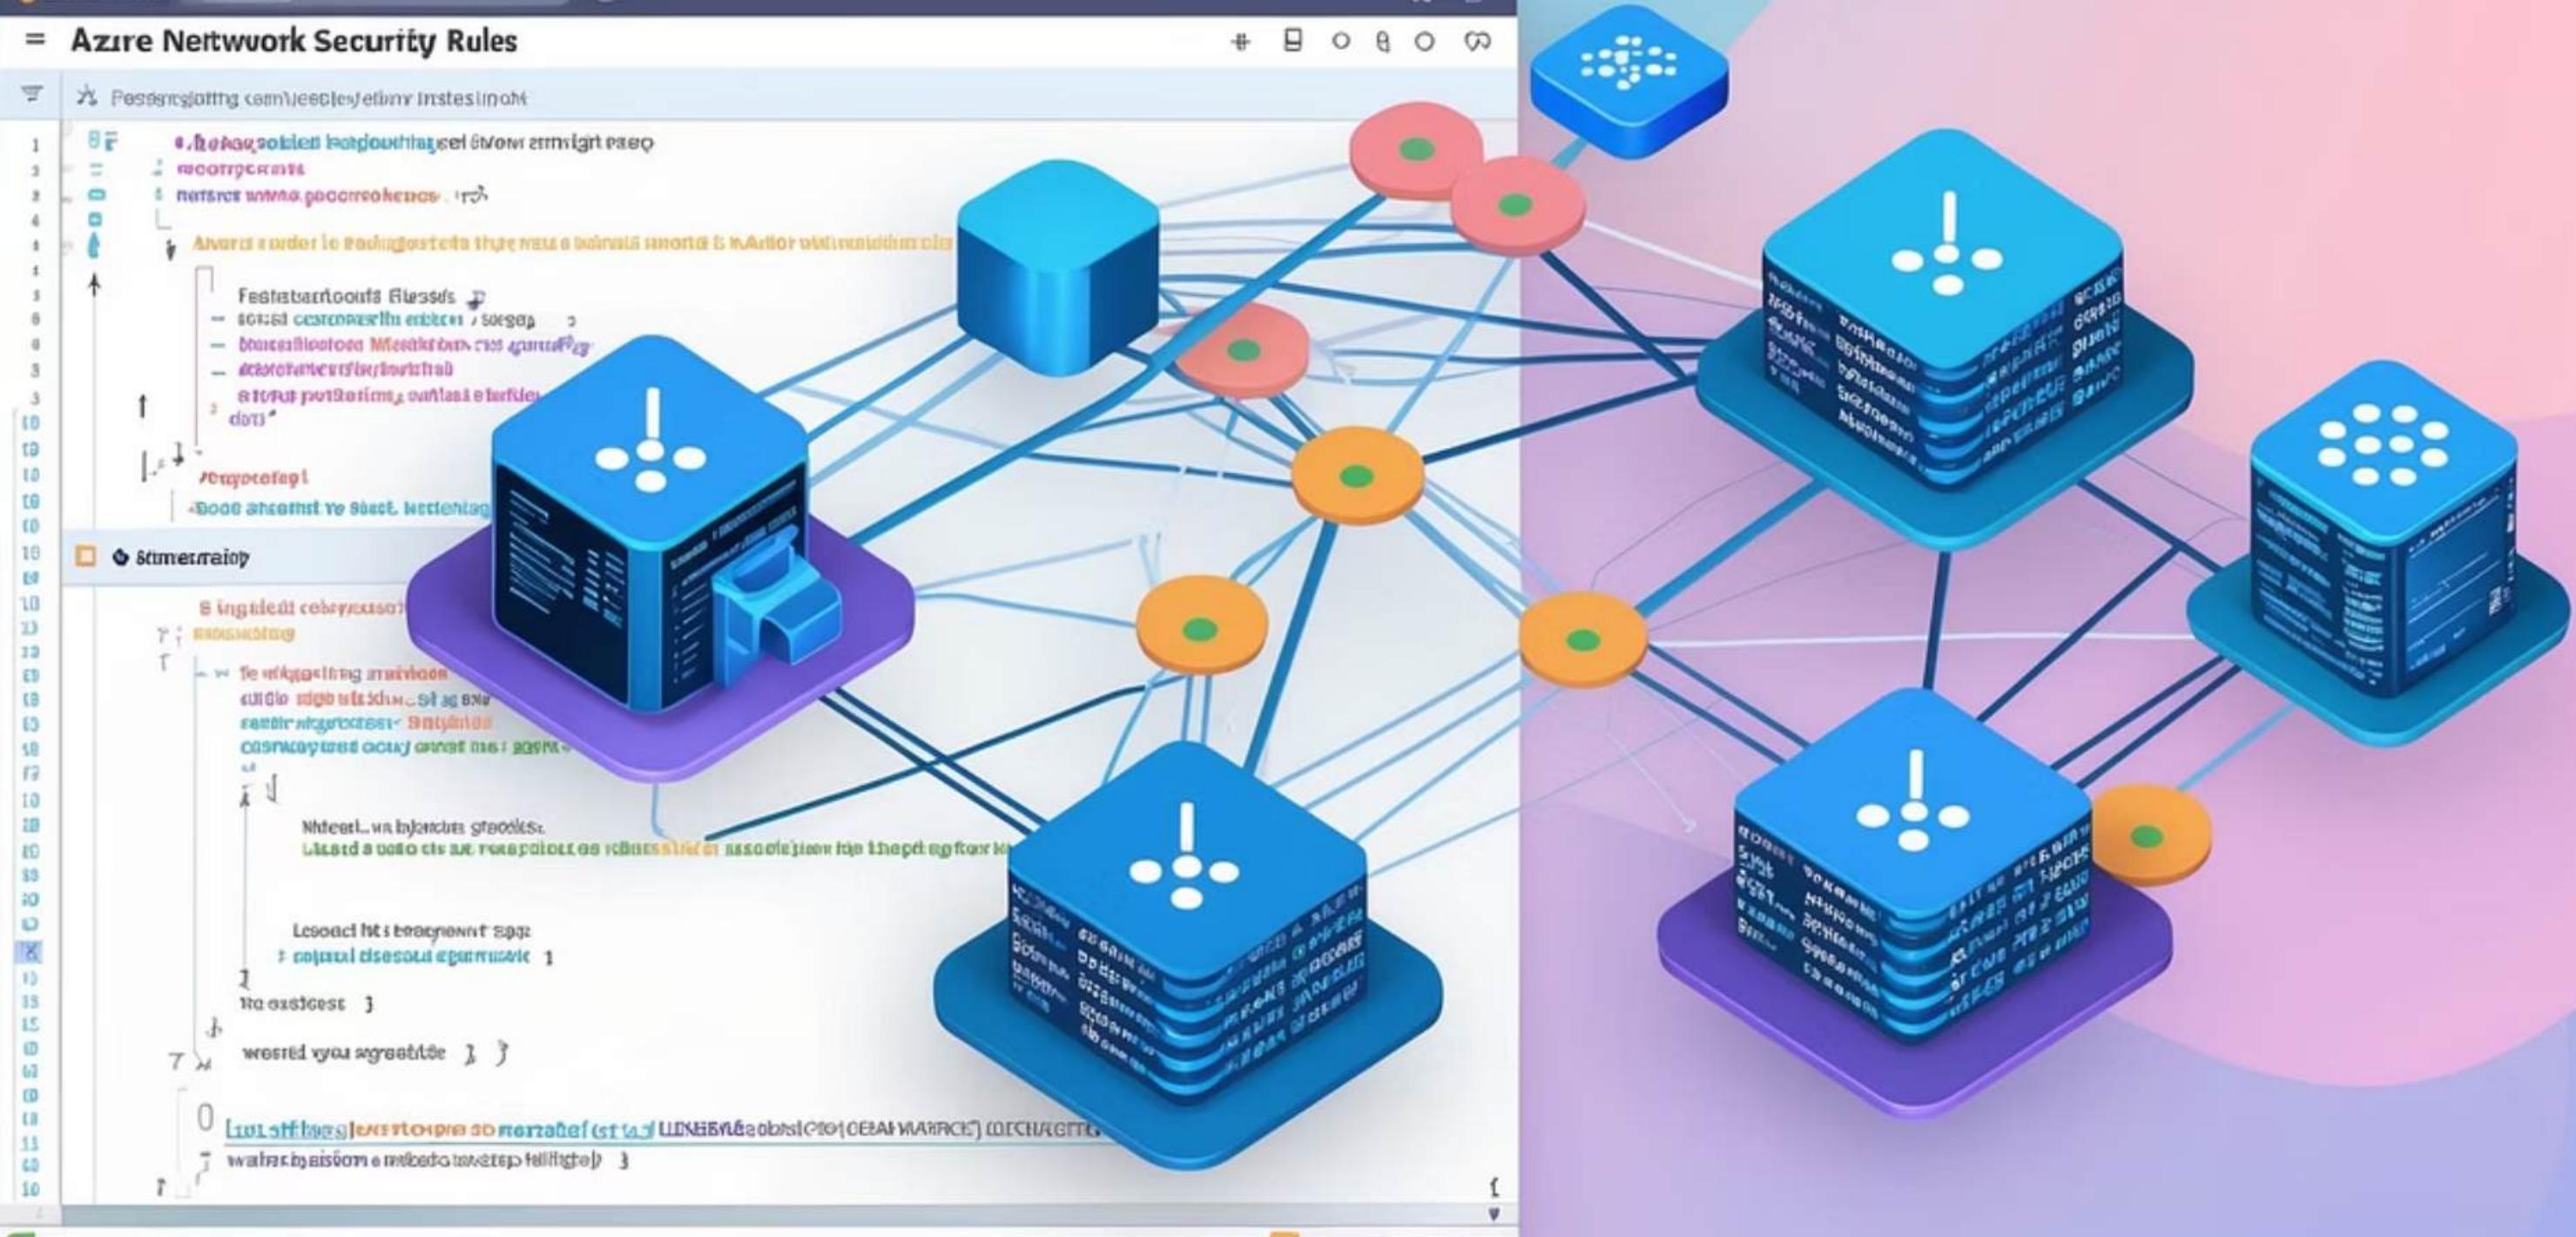

Use secret references in other Azure resources

Azure Monitor Automation

```
resource "azurerm_monitor_action_group" "example" {  
    name                  = "example-actiongroup"  
    resource_group_name   = azurerm_resource_group.example.name  
    short_name            = "exampleact"  
  
    email_receiver {  
        name      = "sendtoadmin"  
        email_address = "admin@example.com"  
    }  
}
```

Configure alerts, action groups, and diagnostic settings for proactive monitoring.

Network Security Groups

Security Rules as

Define inbound and outbound traffic policies programmatically

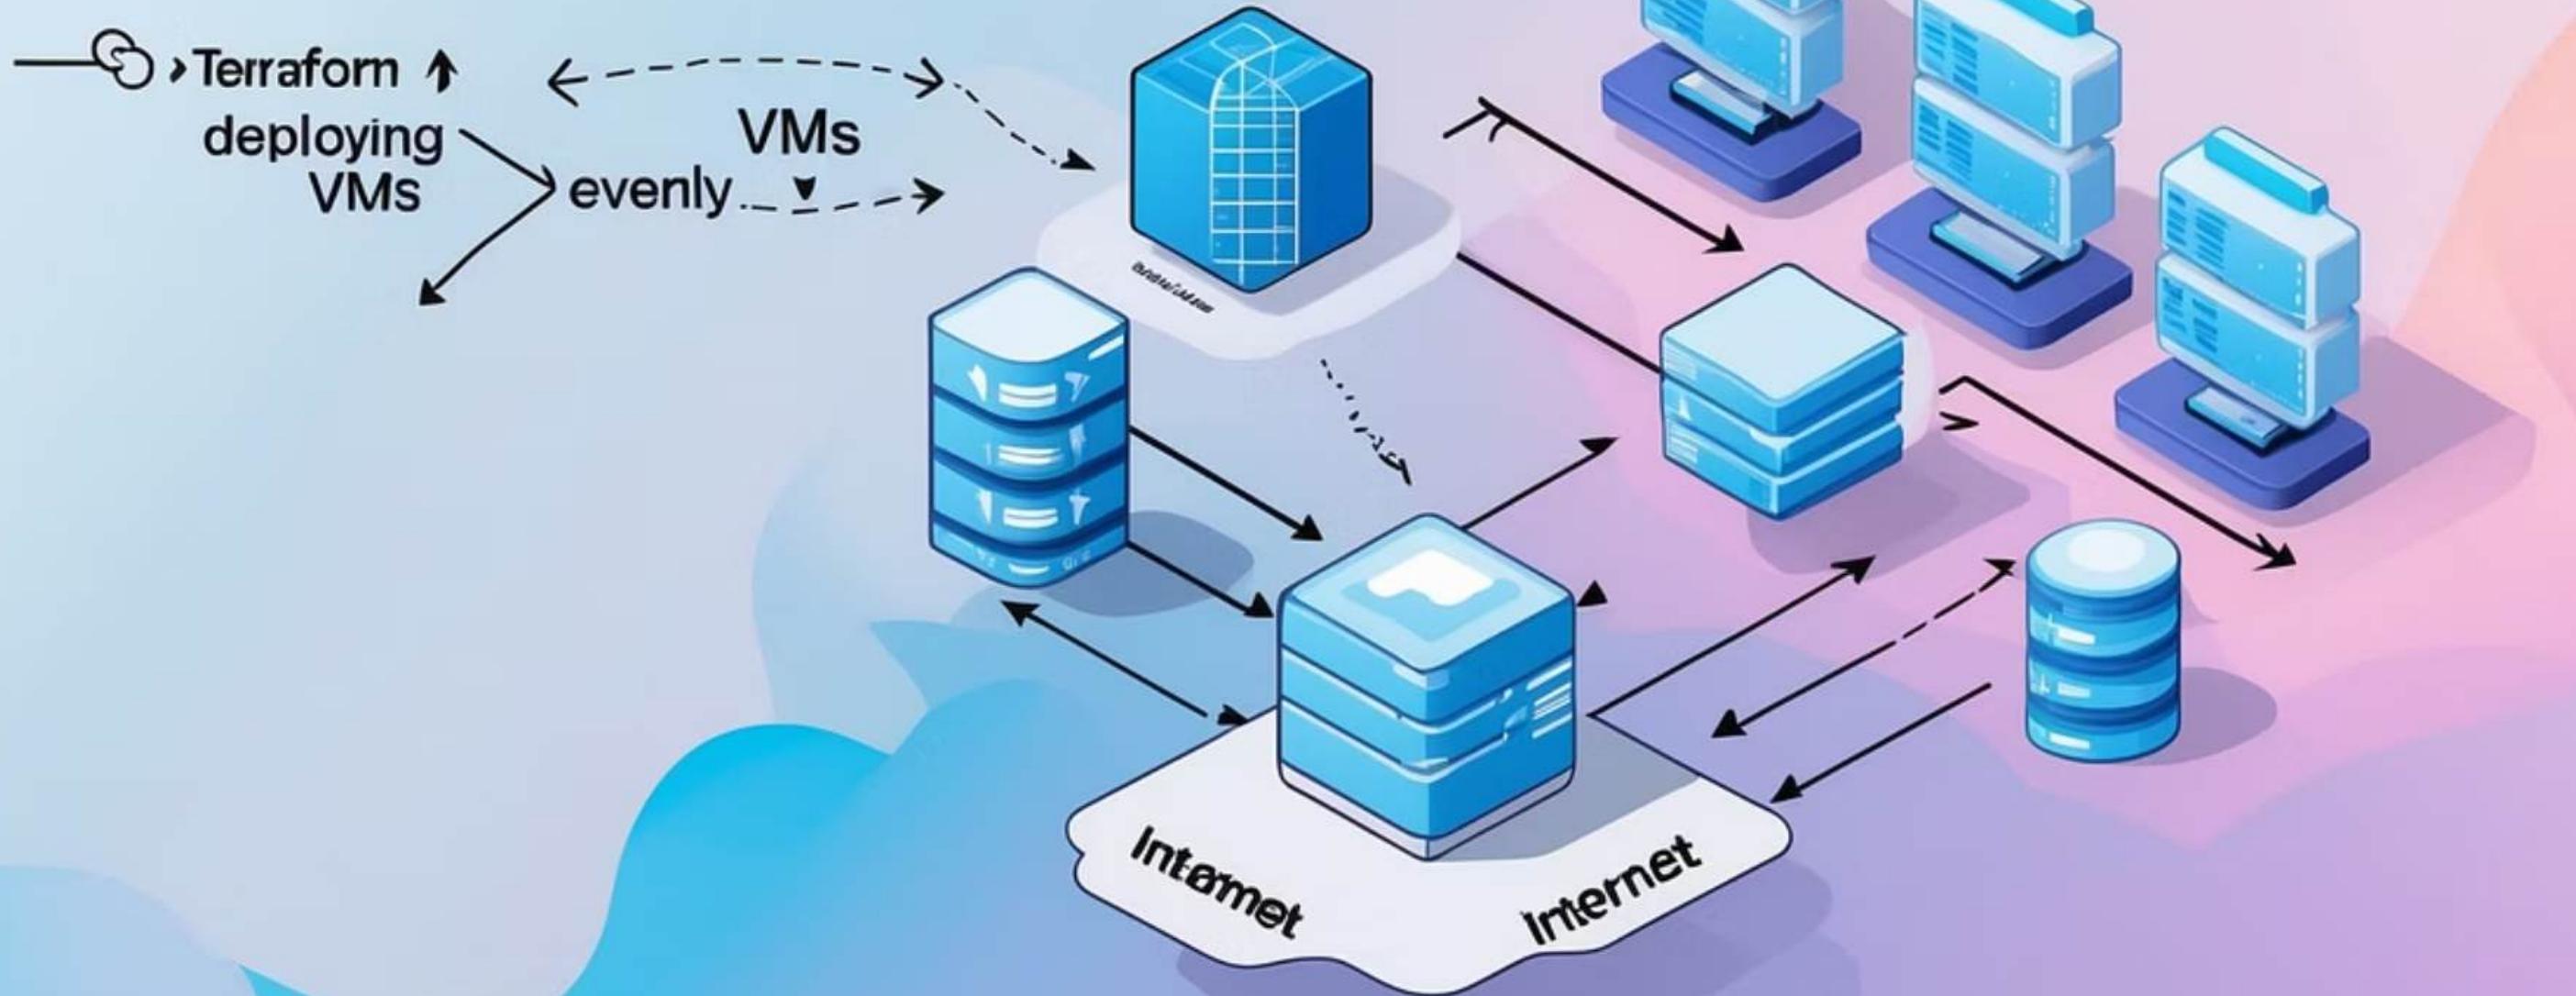

Consistent Policies

Apply the same security standards across environments

Audit Capabilities

Track changes to security configurations over time

Azure Load Balancer Distribute Distributing

Load Balancer Configuration

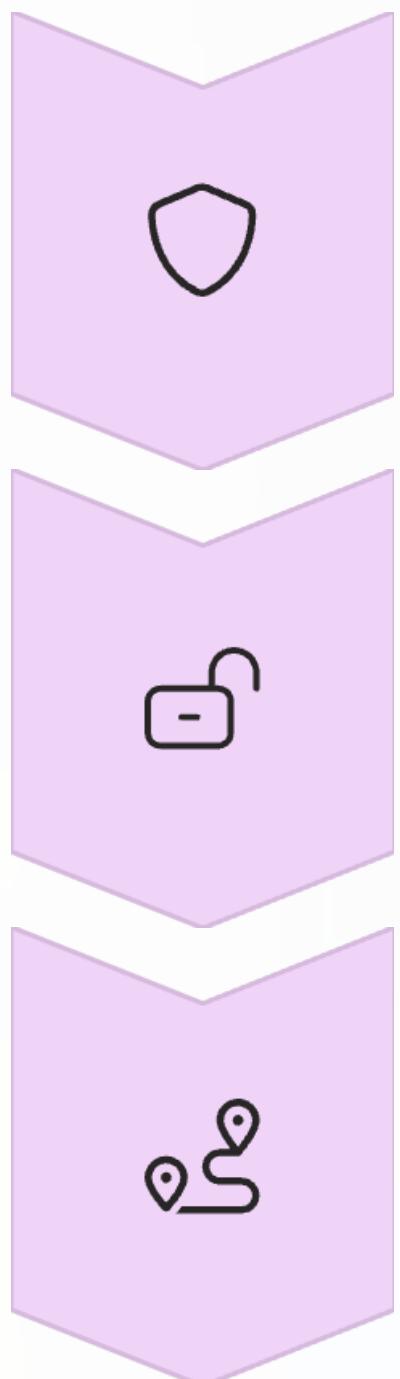

```
resource "azurerm_lb" "example" {
    name          = "example-lb"
    location      = "East US"
    resource_group_name = azurerm_resource_group.example.name

    frontend_ip_configuration {
        name          = "PublicIPAddress"
        public_ip_address_id = azurerm_public_ip.example.id
    }
}
```

Deploy load balancers with health probes and backend pools for high availability.

Application Gateway Setup

WAF Protection

Configure web application firewall rules

SSL Termination

Set up HTTPS endpoints with certificates

Path-Based Routing

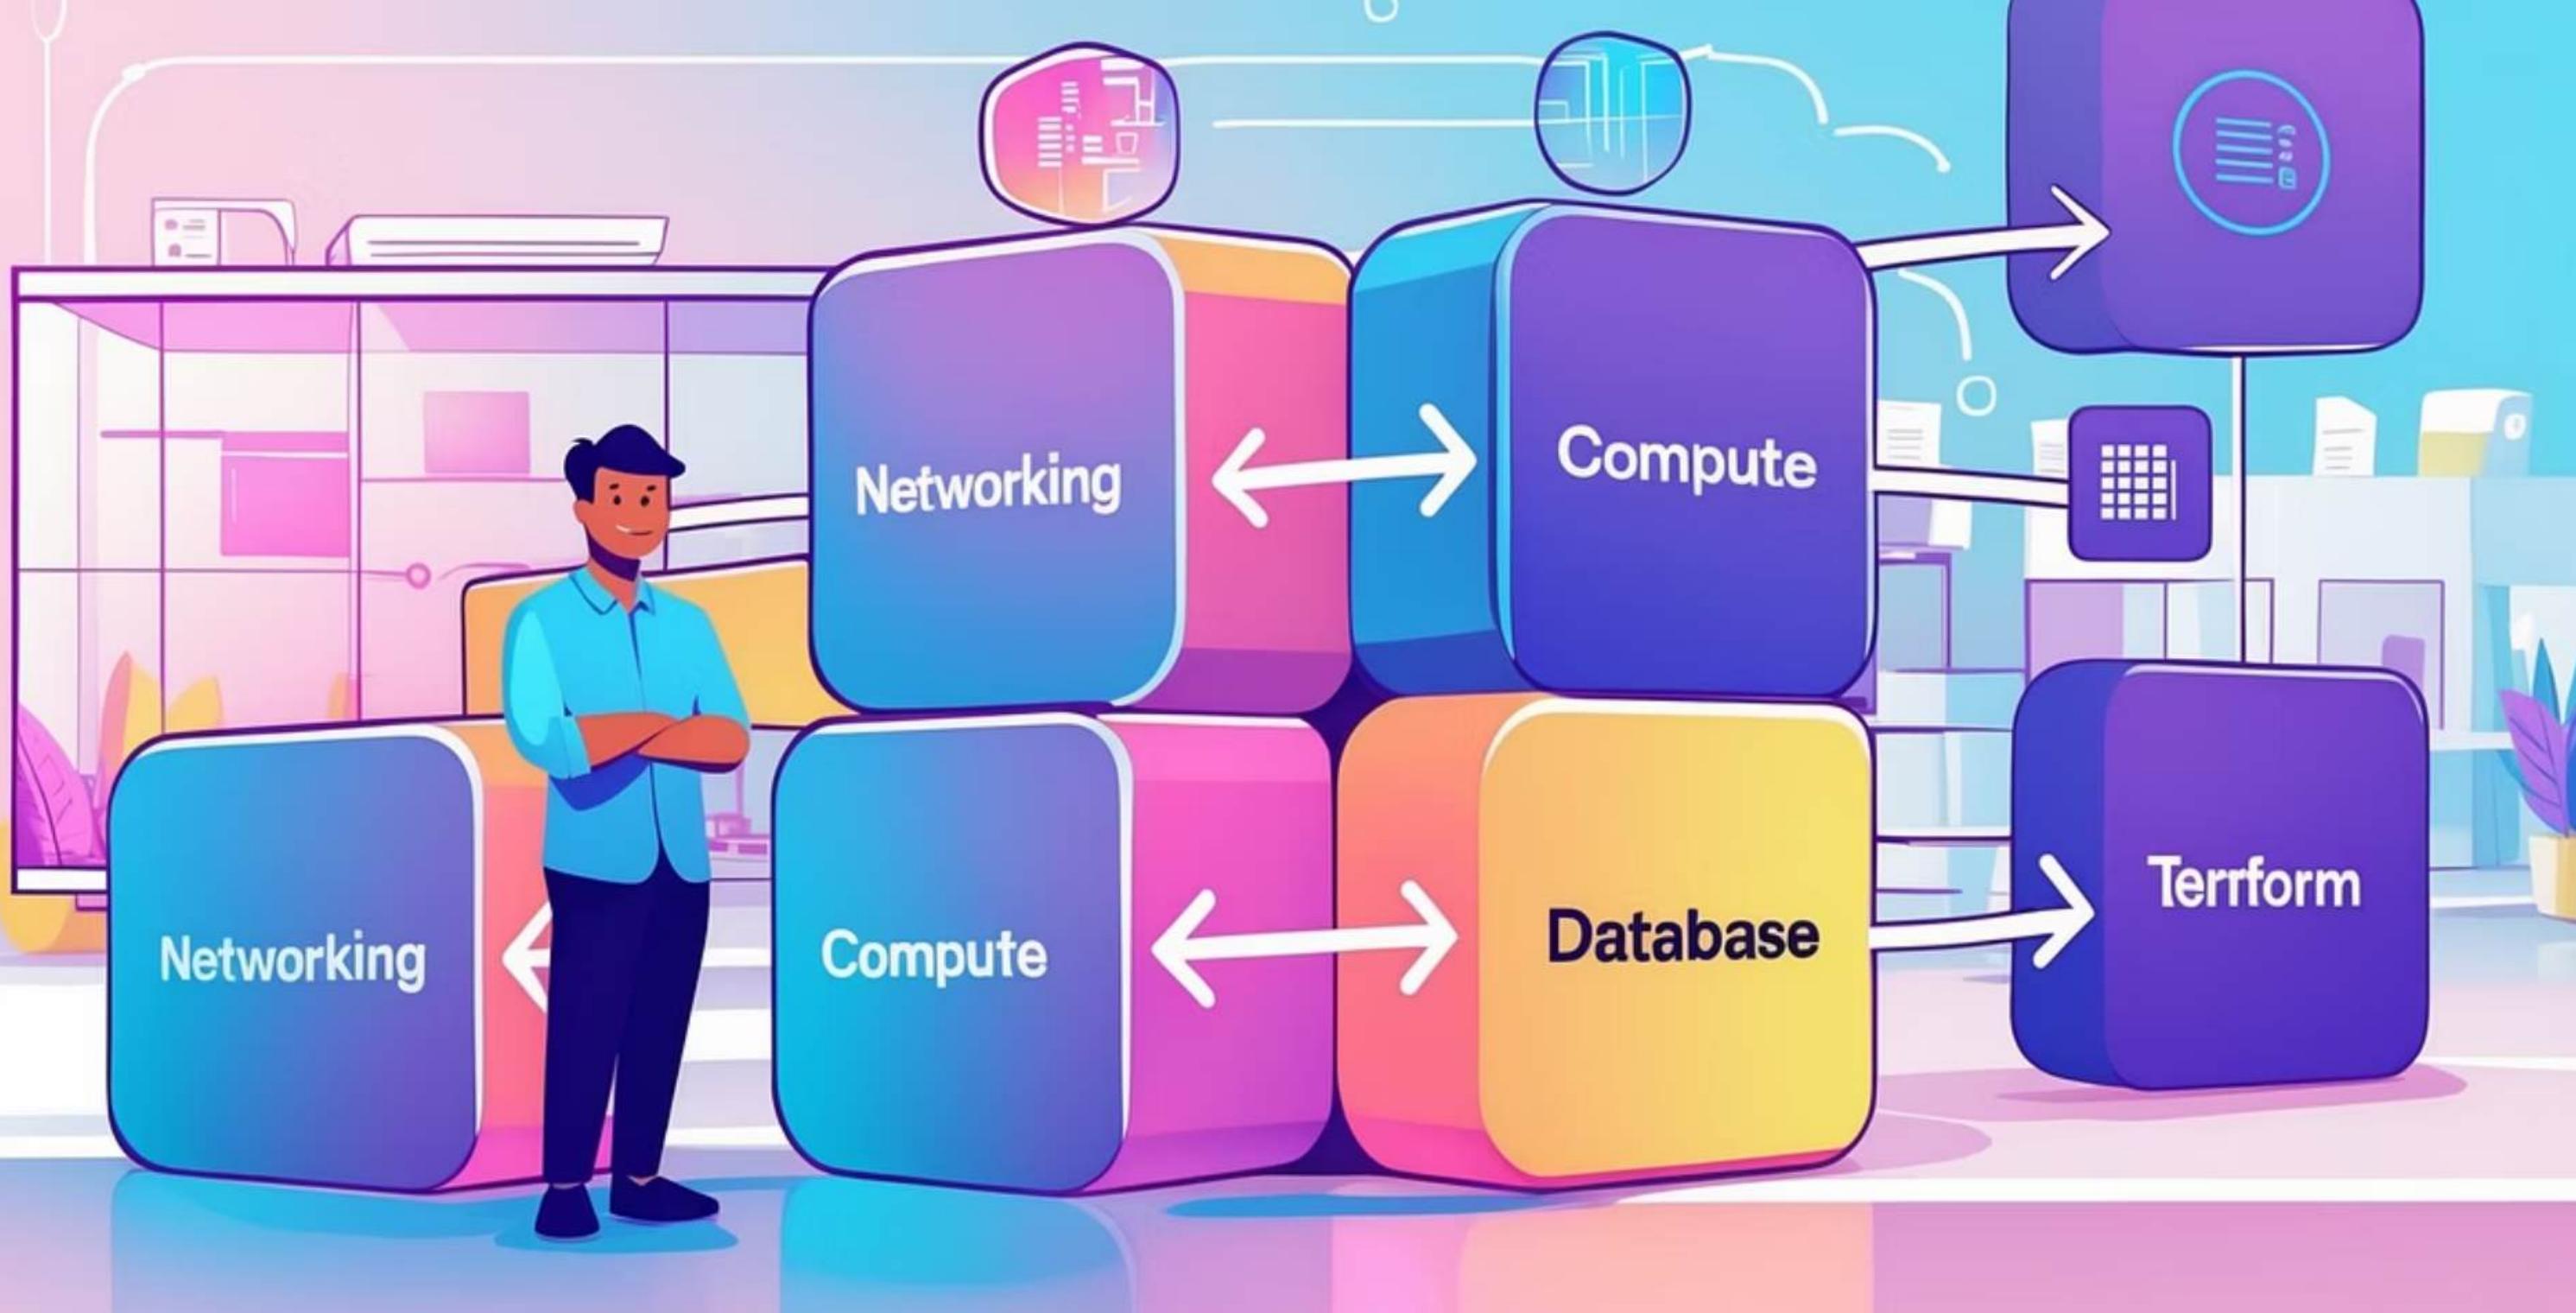

Direct traffic based on URL patterns

Azure Firewall Deployment

```
resource "azurerm_firewall" "example" {
    name          = "example-firewall"
    location      = "East US"
    resource_group_name =
        azurerm_resource_group.example.name
    sku_name       = "AZFW_VNet"
    sku_tier       = "Standard"

    ip_configuration {
        name          = "configuration"
        subnet_id     =
            azurerm_subnet.example.id
        public_ip_address_id =
            azurerm_public_ip.example.id
    }
}
```

Implement network filtering with application and network rules for enhanced security.

Terraform Modules

Reusable

Create custom modules for common architectures

Development Speed

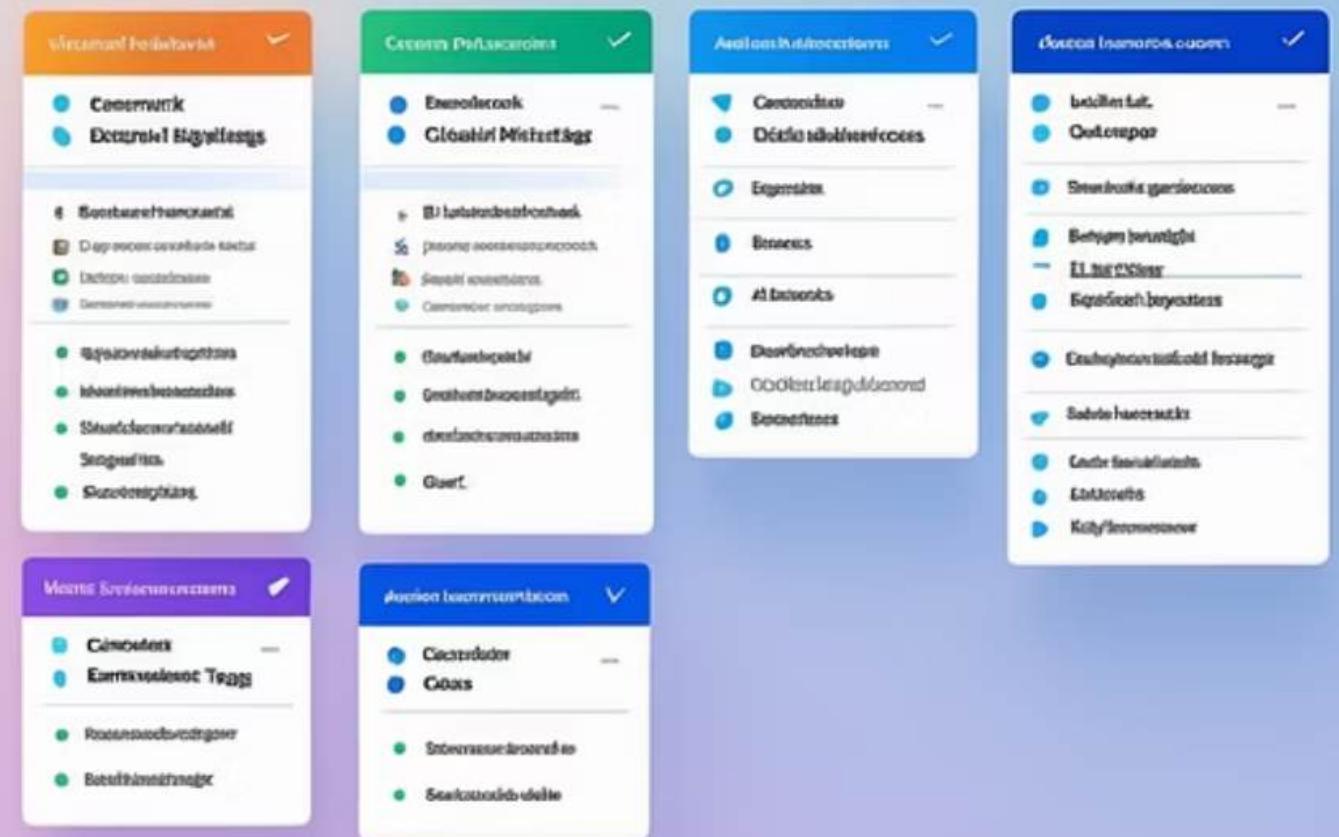

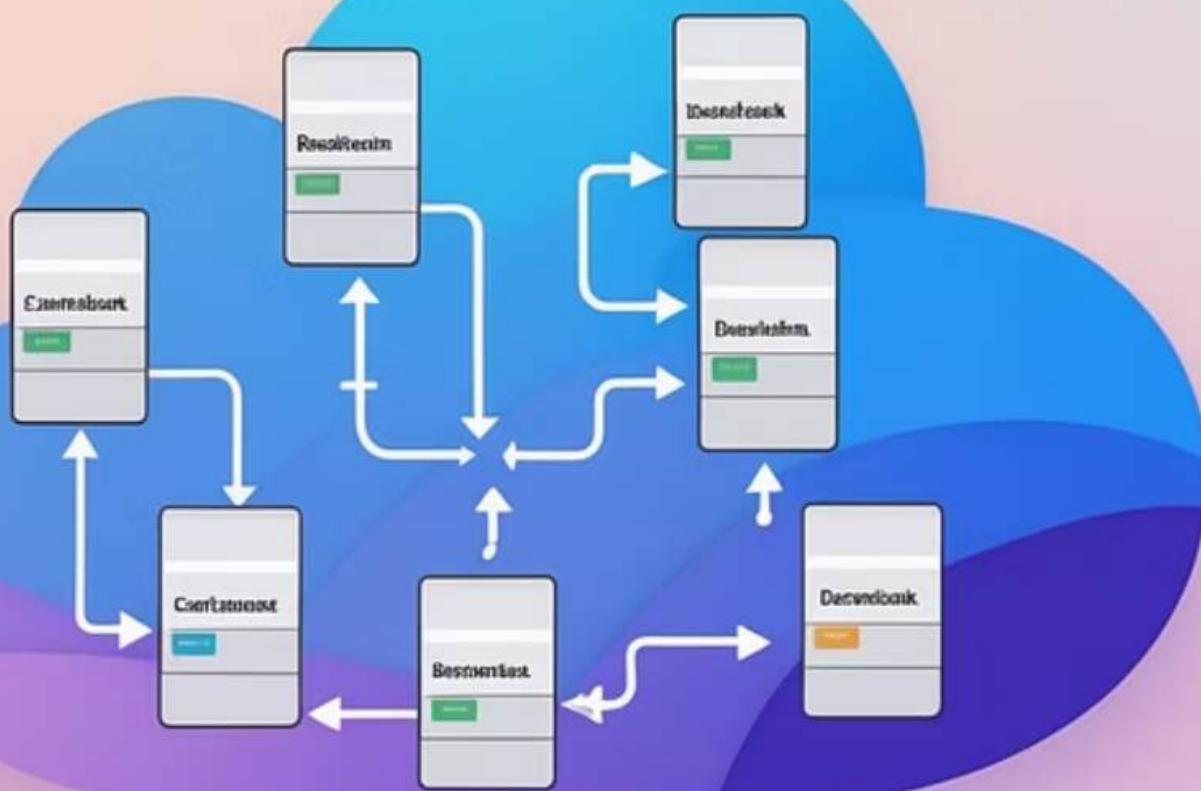

Accelerate deployment time by 40% with modules

Standardization

Ensure consistent deployments across projects

Azure Resource Tags

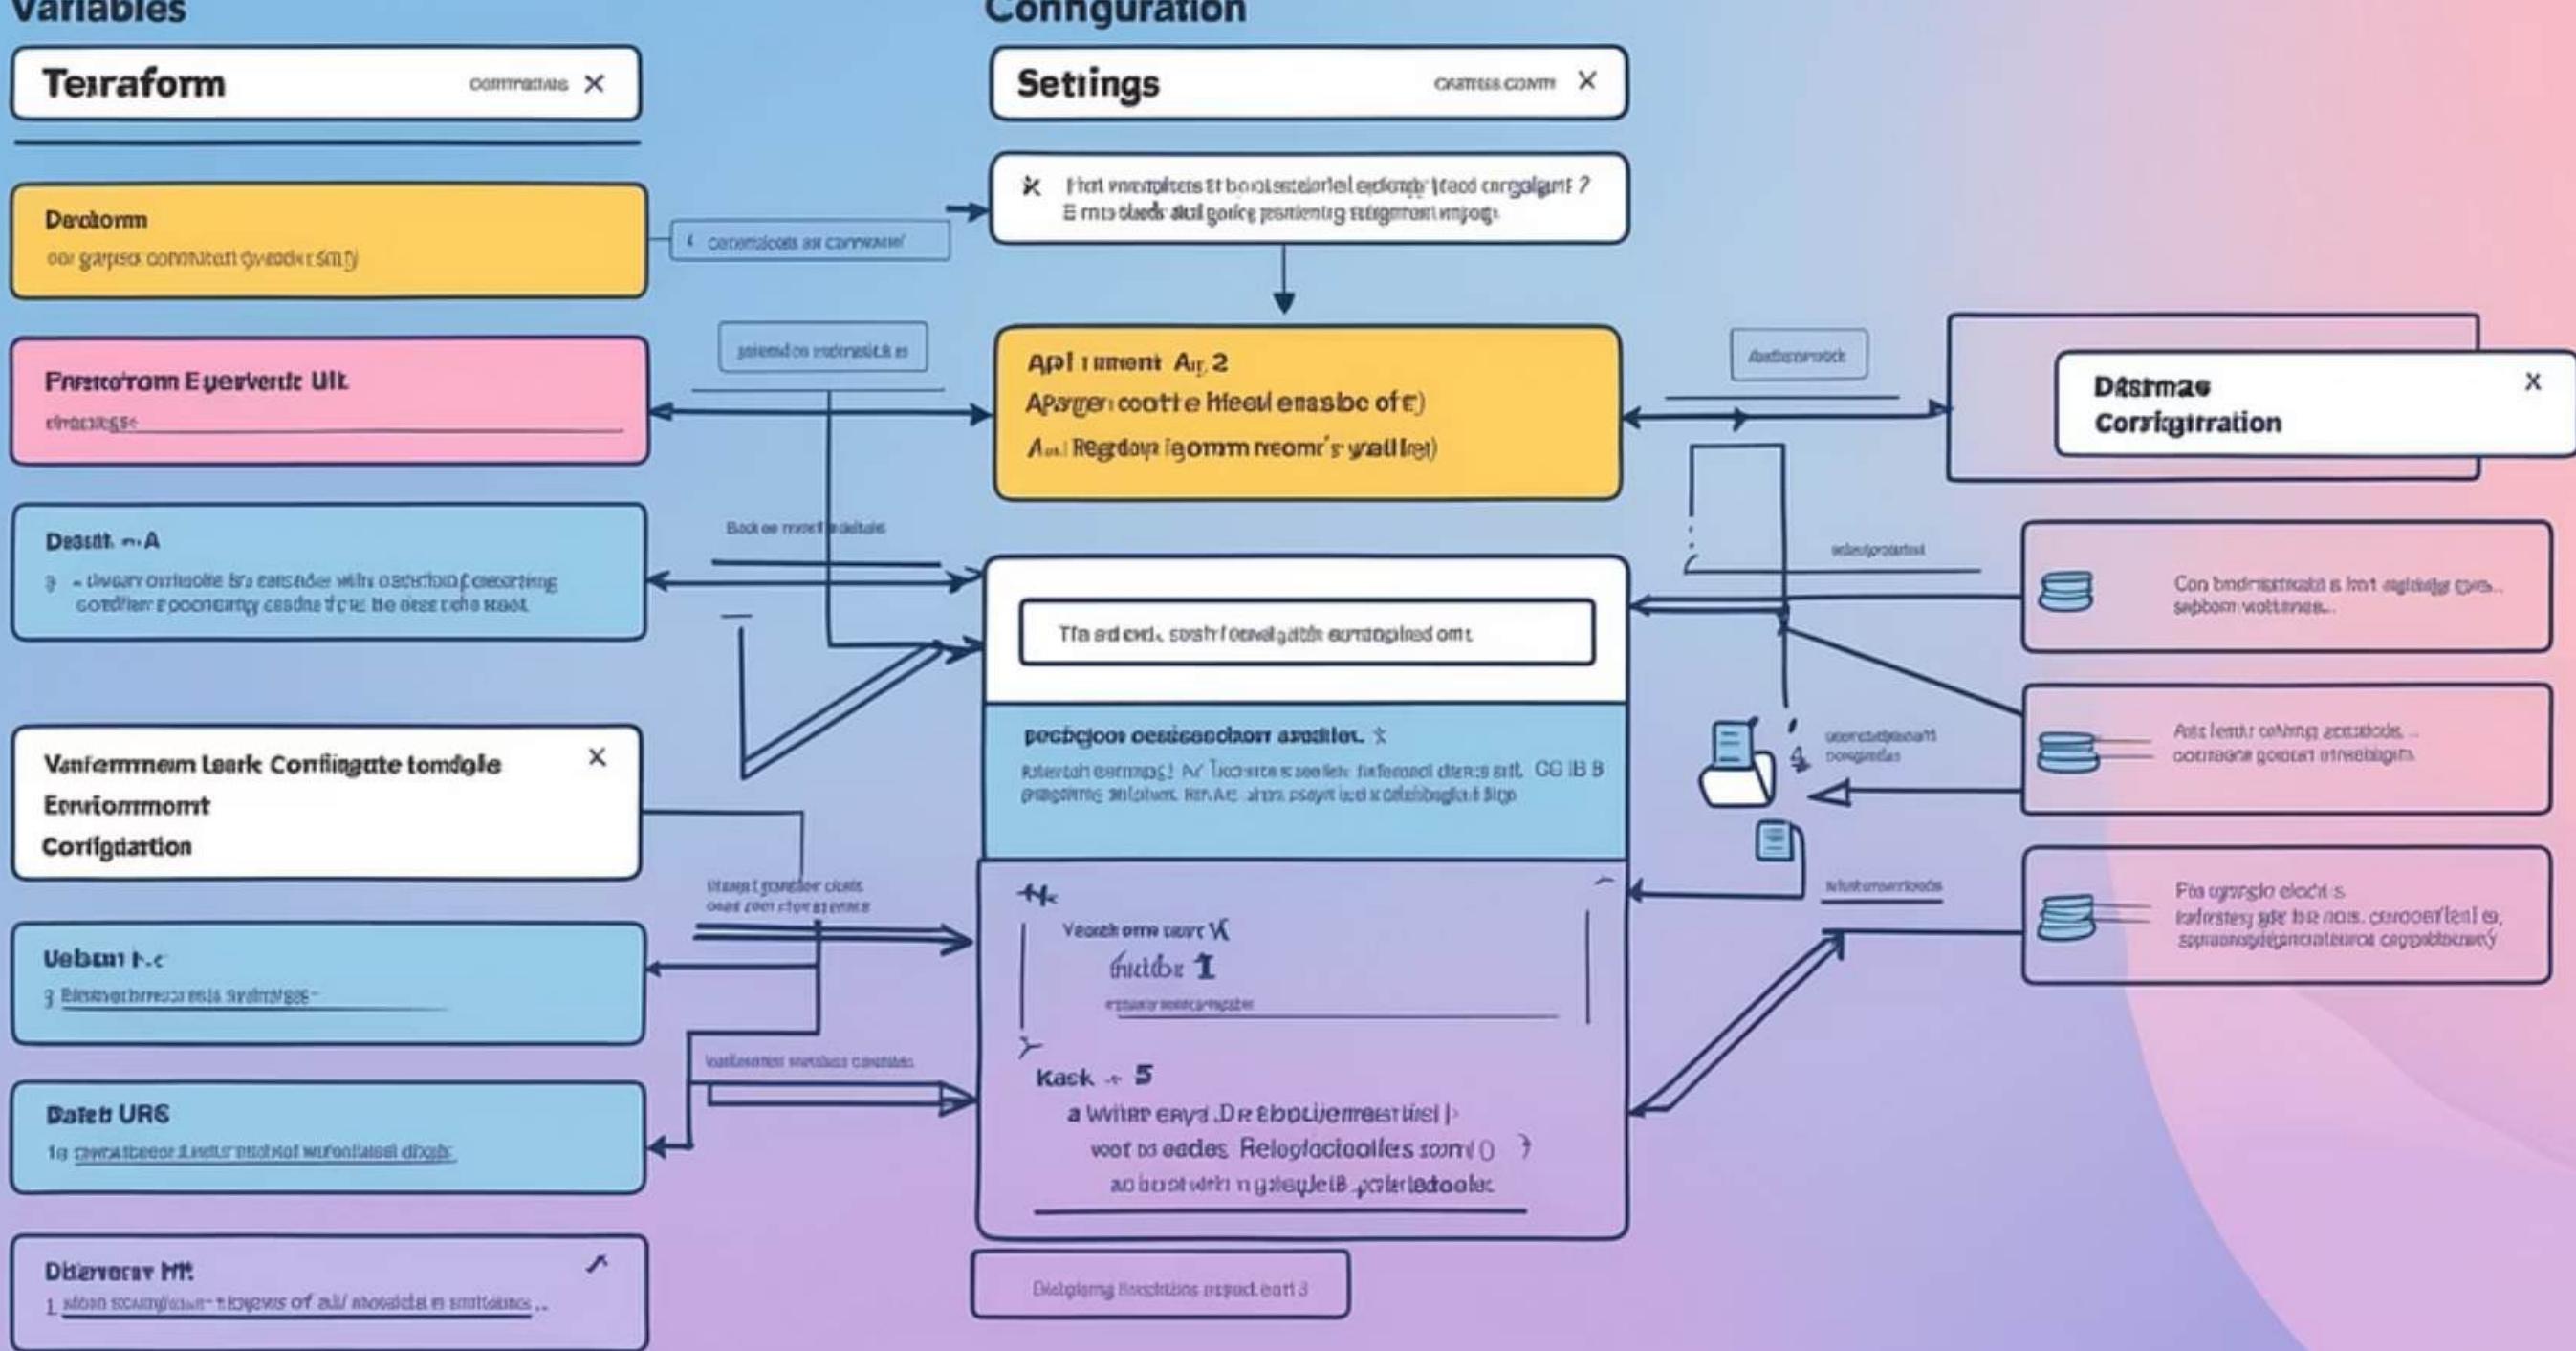

Resource Tagging Strategy

```
resource "azurerm_resource_group" "example" {
    name      = "example-resources"
    location  = "East US"

    tags = {
        environment = "production"
        department   = "finance"
        project     = "core-infrastructure"
        owner       = "cloud-team"
    }
}
```

Implement consistent tagging for better governance and cost tracking.

Variable Management

Input Variables

Create flexible, reusable configuration with parameters

Environment Values

Define different settings for dev, test, and production

Sensitive Data

Protect passwords and keys with sensitive variables

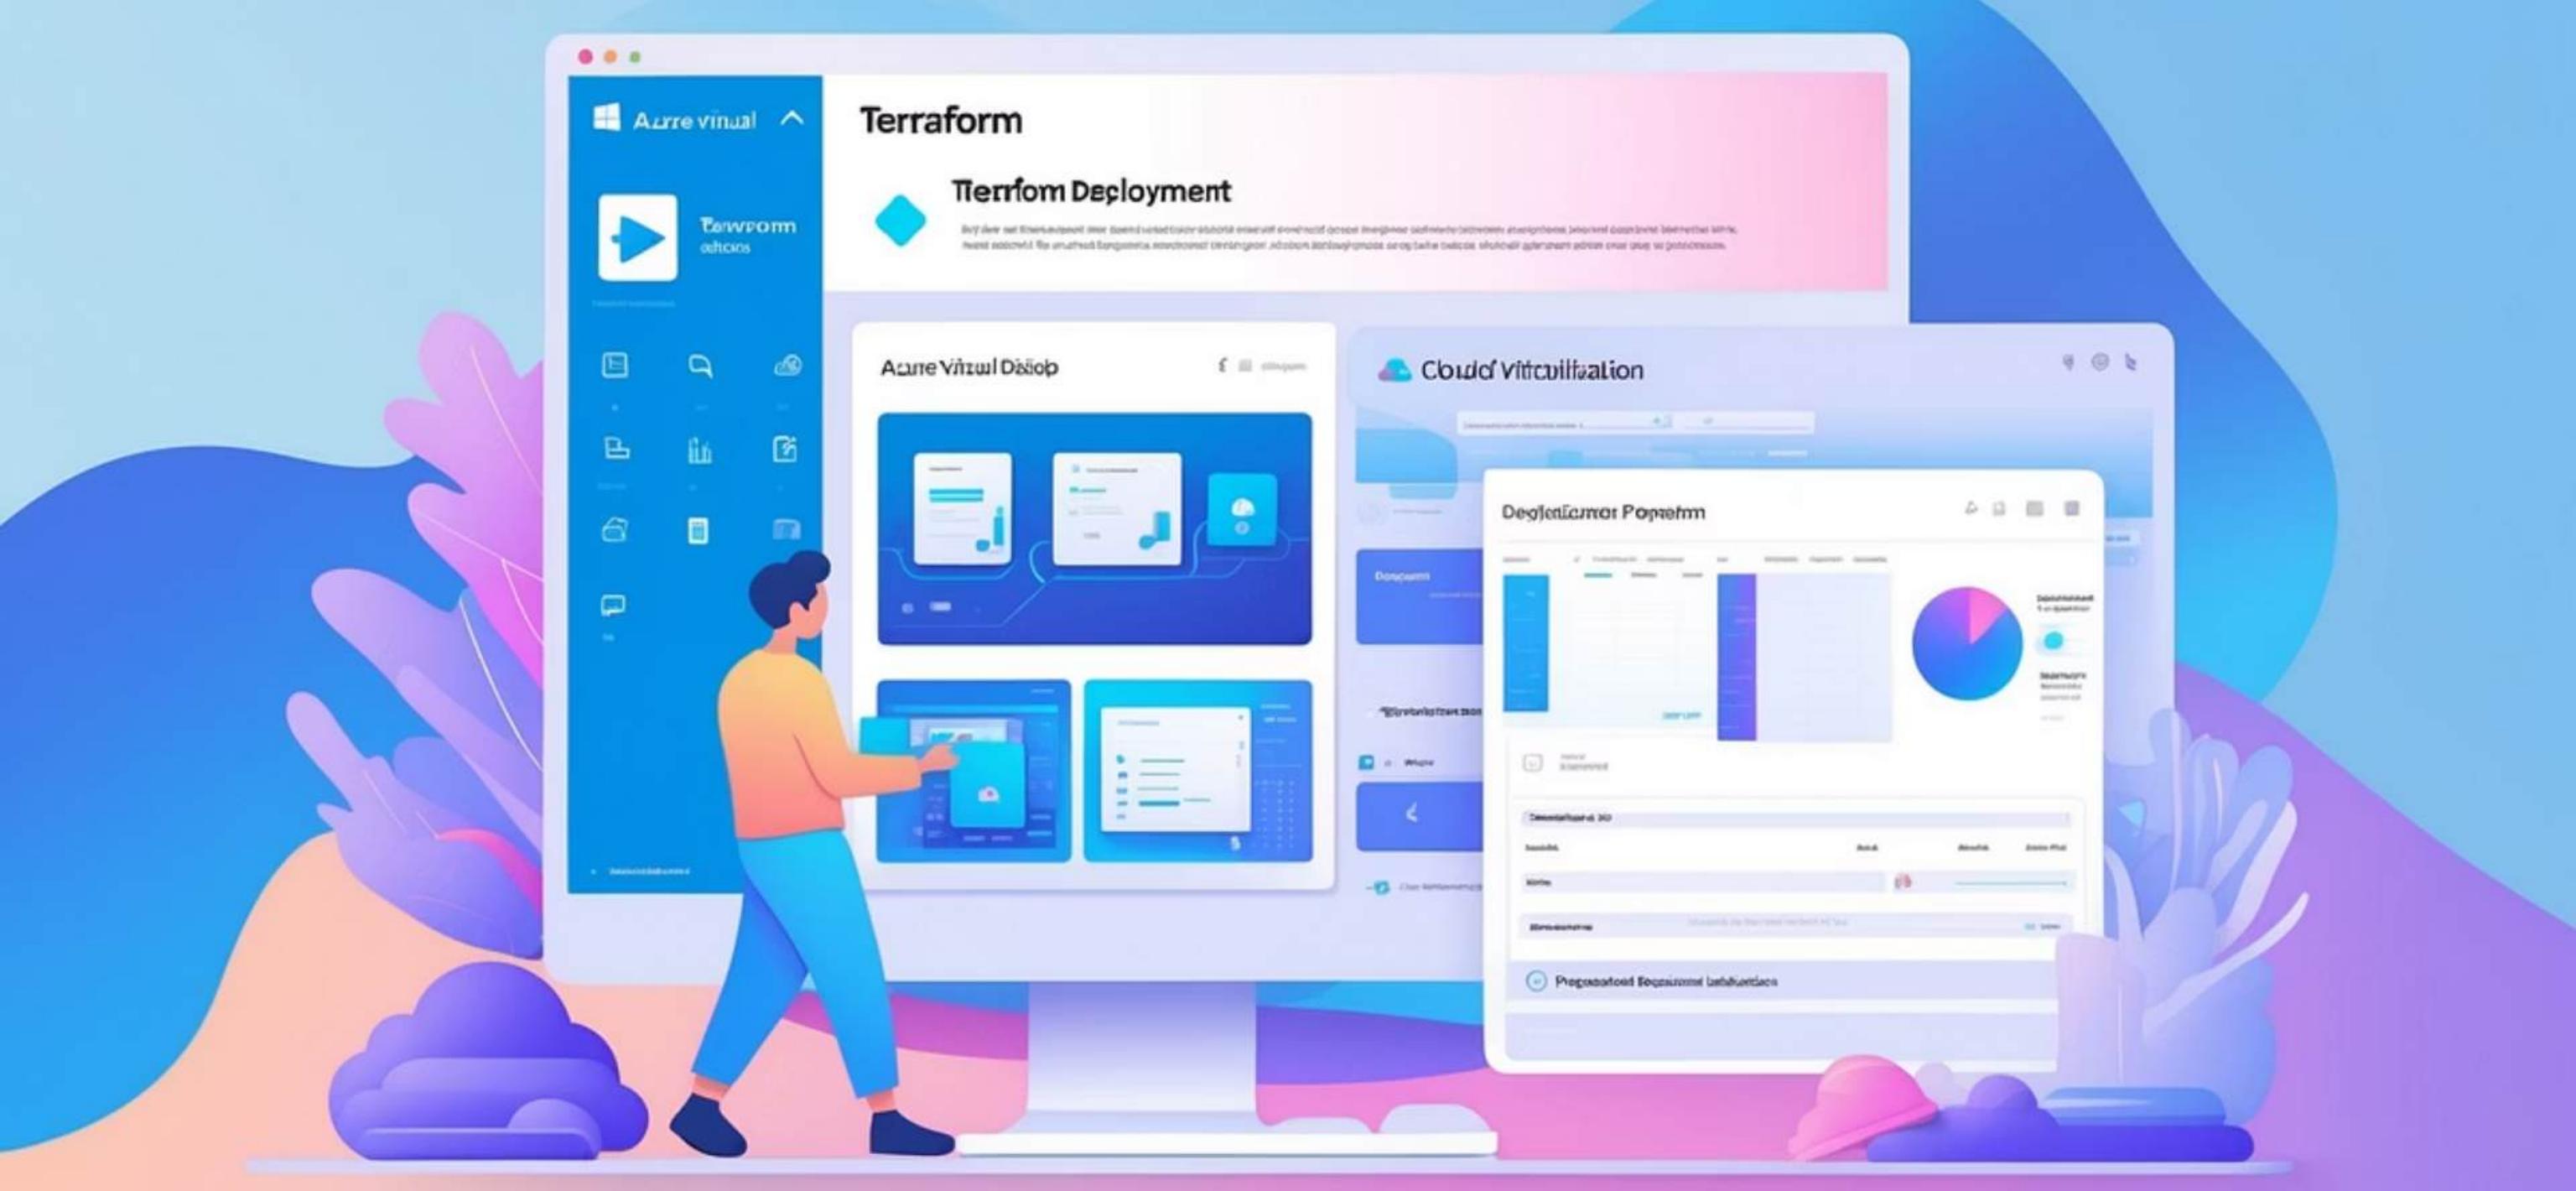

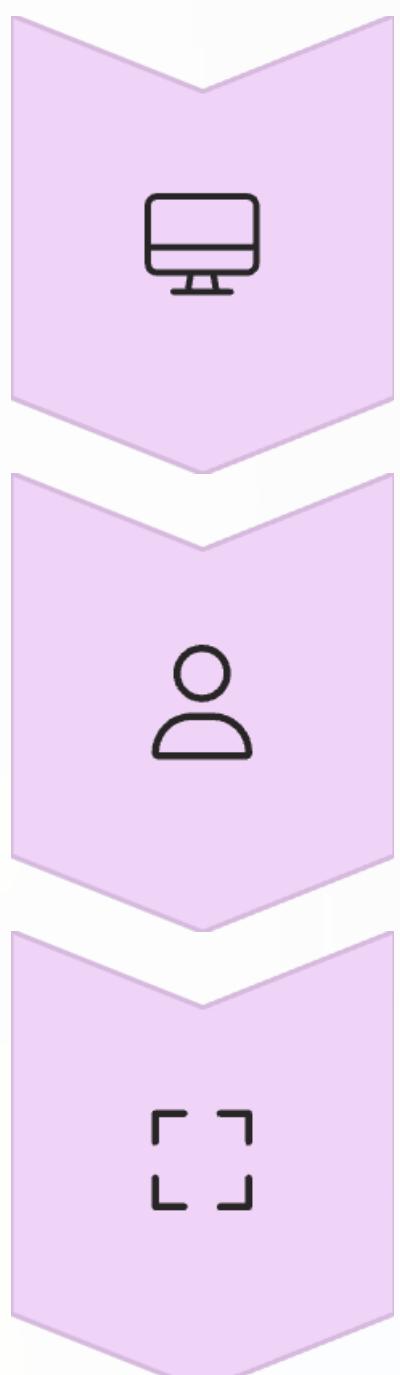

Azure Active Directory

```
resource "azurerm_role_assignment" "example" {
    scope                  =
    azurerm_resource_group.example.id
    role_definition_name = "Contributor"
    principal_id          =
    azurerm_user_assigned_identity.example.principal_id
}
```

Create service principals and assign RBAC roles programmatically for secure automation.

Virtual Desktop Automation

Host Pools

Create AVD environments with consistent settings

App Groups

Configure application access for user groups

Scaling Plans

Manage session host scaling through code

Container Registry Setup

```
resource "azurerm_container_registry" "example" {
    name                  = "exampleacr"
    resource_group_name  = azurerm_resource_group.example.name
    location              = "East US"
    sku                   = "Premium"
    admin_enabled         = false

    georeplications {
        location      = "West US"
        zone_redundancy_enabled = true
    }
}
```

Create private registries with geo-replication for global container access.

API Management Deployment

API Gateway

Deploy APIM instances for centralized API management

Policy Configuration

Apply consistent security and transformation policies

Rate Limiting

Implement throttling and quotas for API protection

Event Hub Automation

```
resource "azurerm_eventhub_namespace" "example" {
    name                  = "example-namespace"
    location              = "East US"
    resource_group_name   = azurerm_resource_group.example.name
    sku                   = "Standard"
    capacity              = 2

    auto_inflate_enabled  = true
    maximum_throughput_units = 10
}
```

Deploy event hubs with proper throughput configuration for high-volume messaging.

Logic Apps Workflow

Workflow as Code

Define integration workflows through Terraform

Service Connections

Configure connections to other Azure services

Triggers & Actions

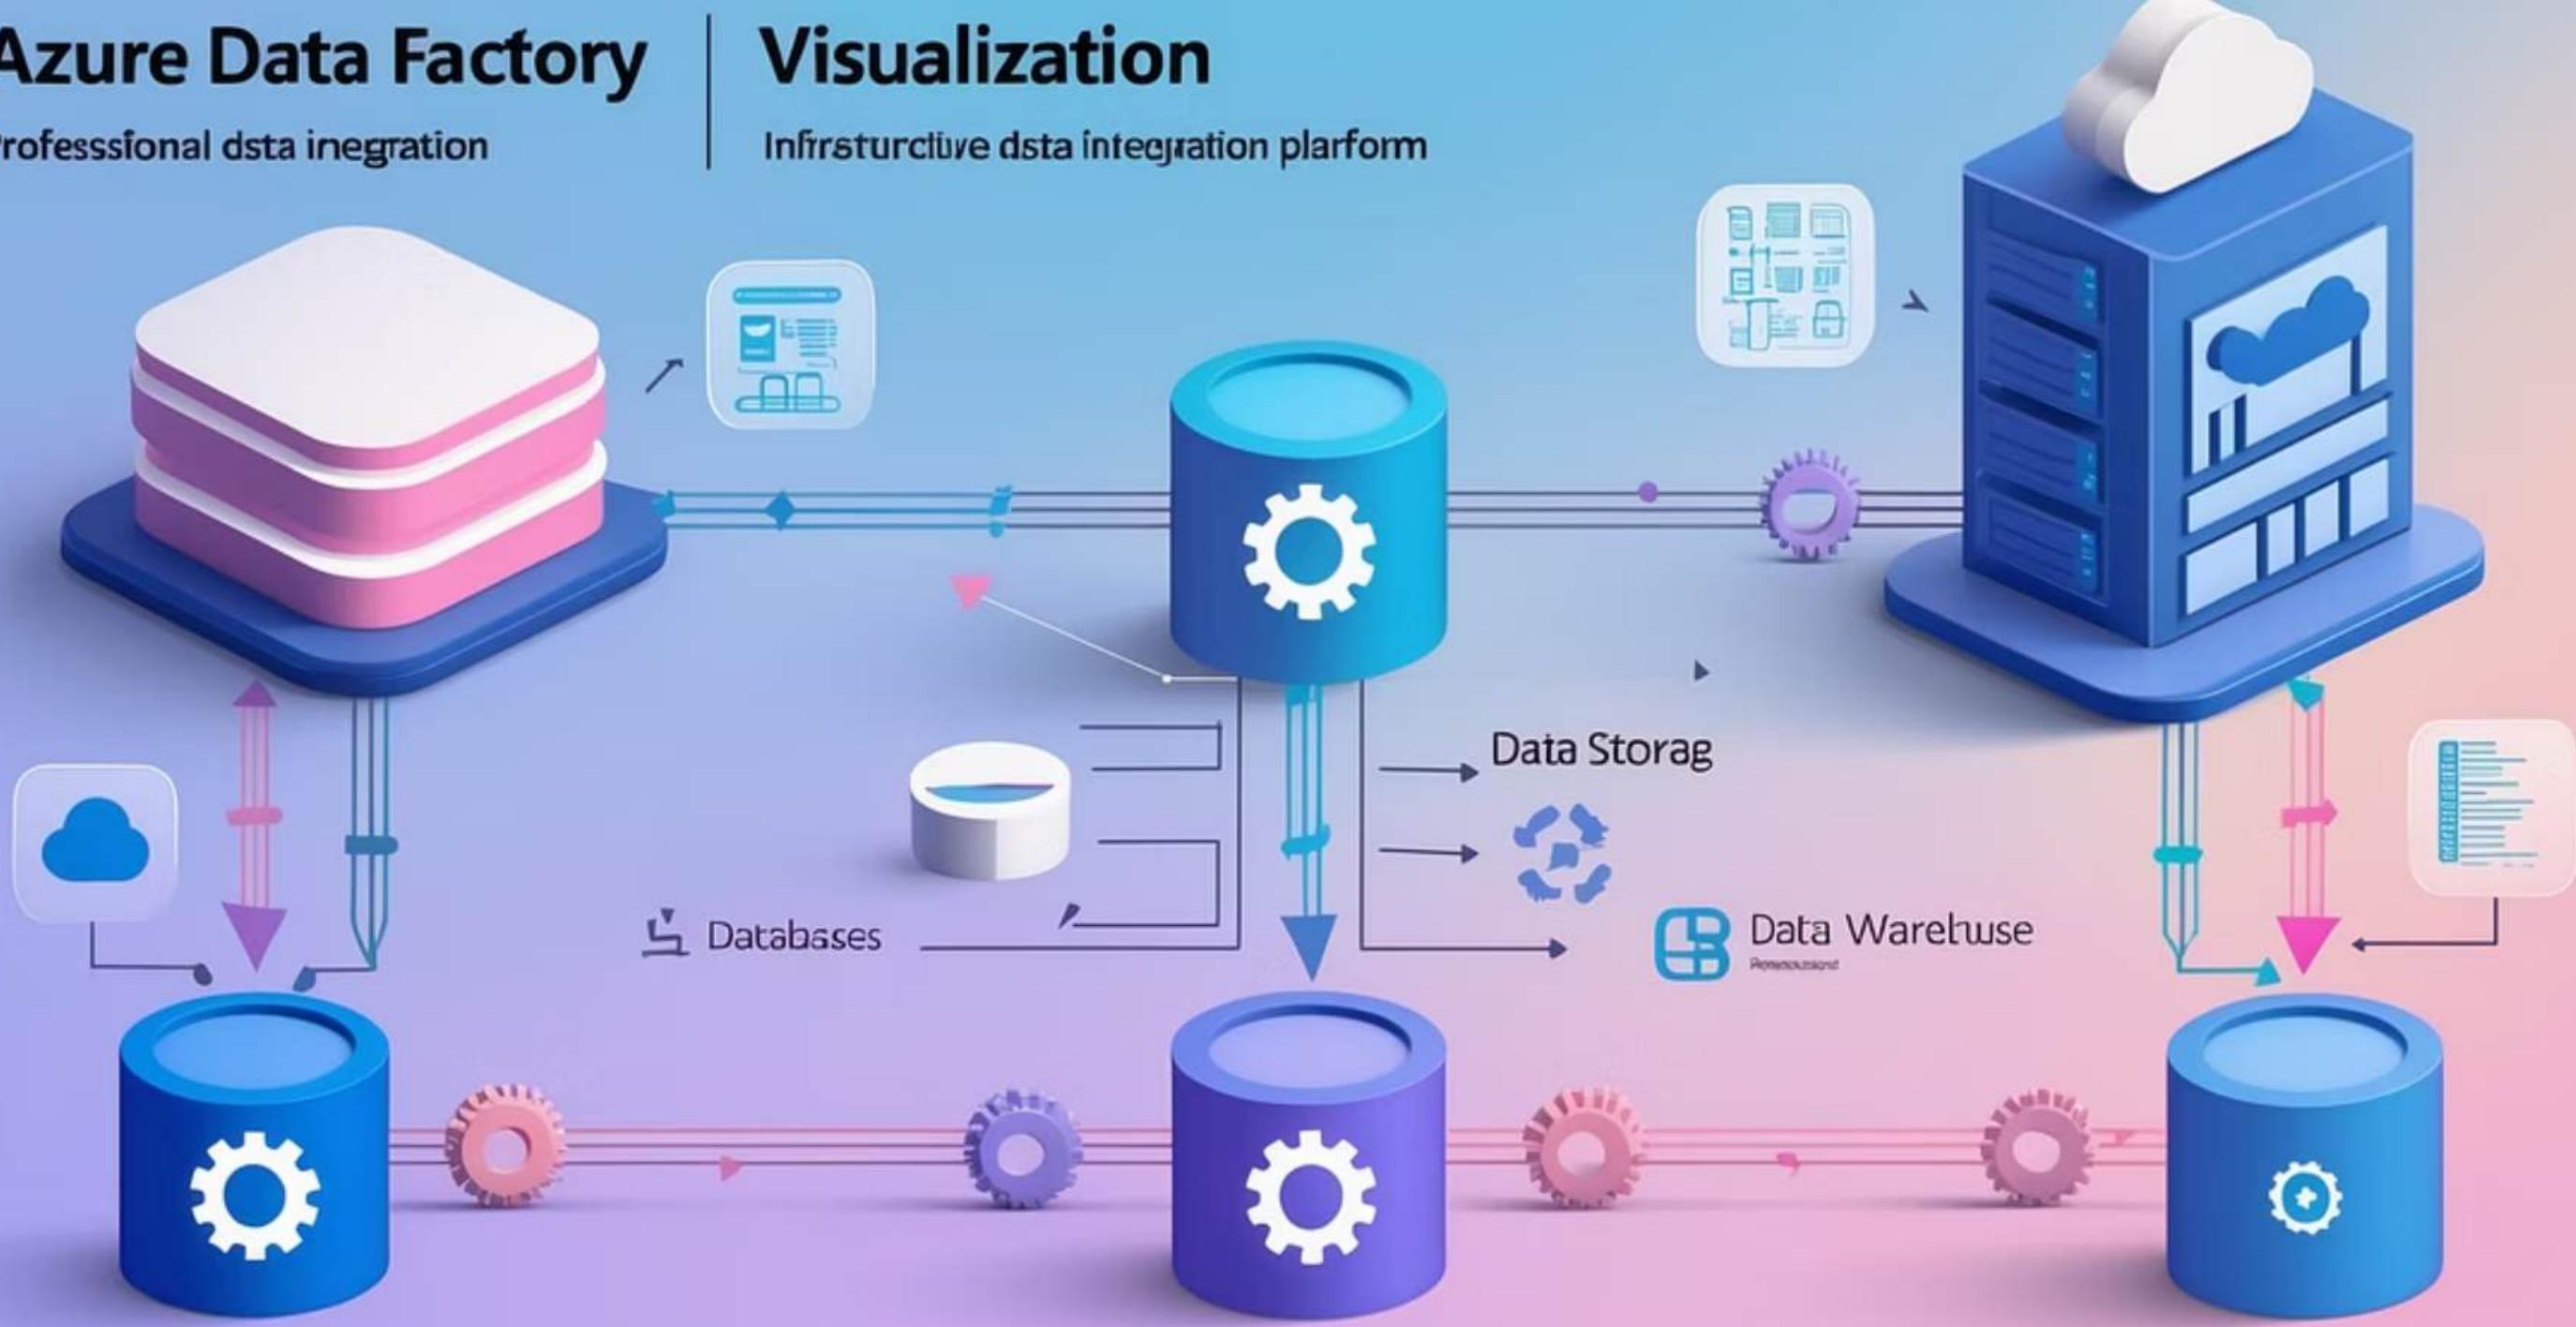

Set up event-based or scheduled workflow triggers

Service Bus Configuration

```
resource "azurerm_servicebus_namespace" "example" {
    name          = "example-servicebus"
    location      = "East US"
    resource_group_name =
    azurerm_resource_group.example.name
    sku           = "Standard"
}

resource "azurerm_servicebus_queue" "example" {
    name          = "example-queue"
    namespace_id  =
    azurerm_servicebus_namespace.example.id
    enable_partitioning = true
}
```

Create message queues and topics with proper configuration for reliable messaging.

Data Factory Pipelines

Data Integration

Deploy complete ETL solutions through Terraform

Linked Services

Configure connections to various data sources

Transformation

Implement data processing workflows as code

DevOps Pipeline Integration

Version Control

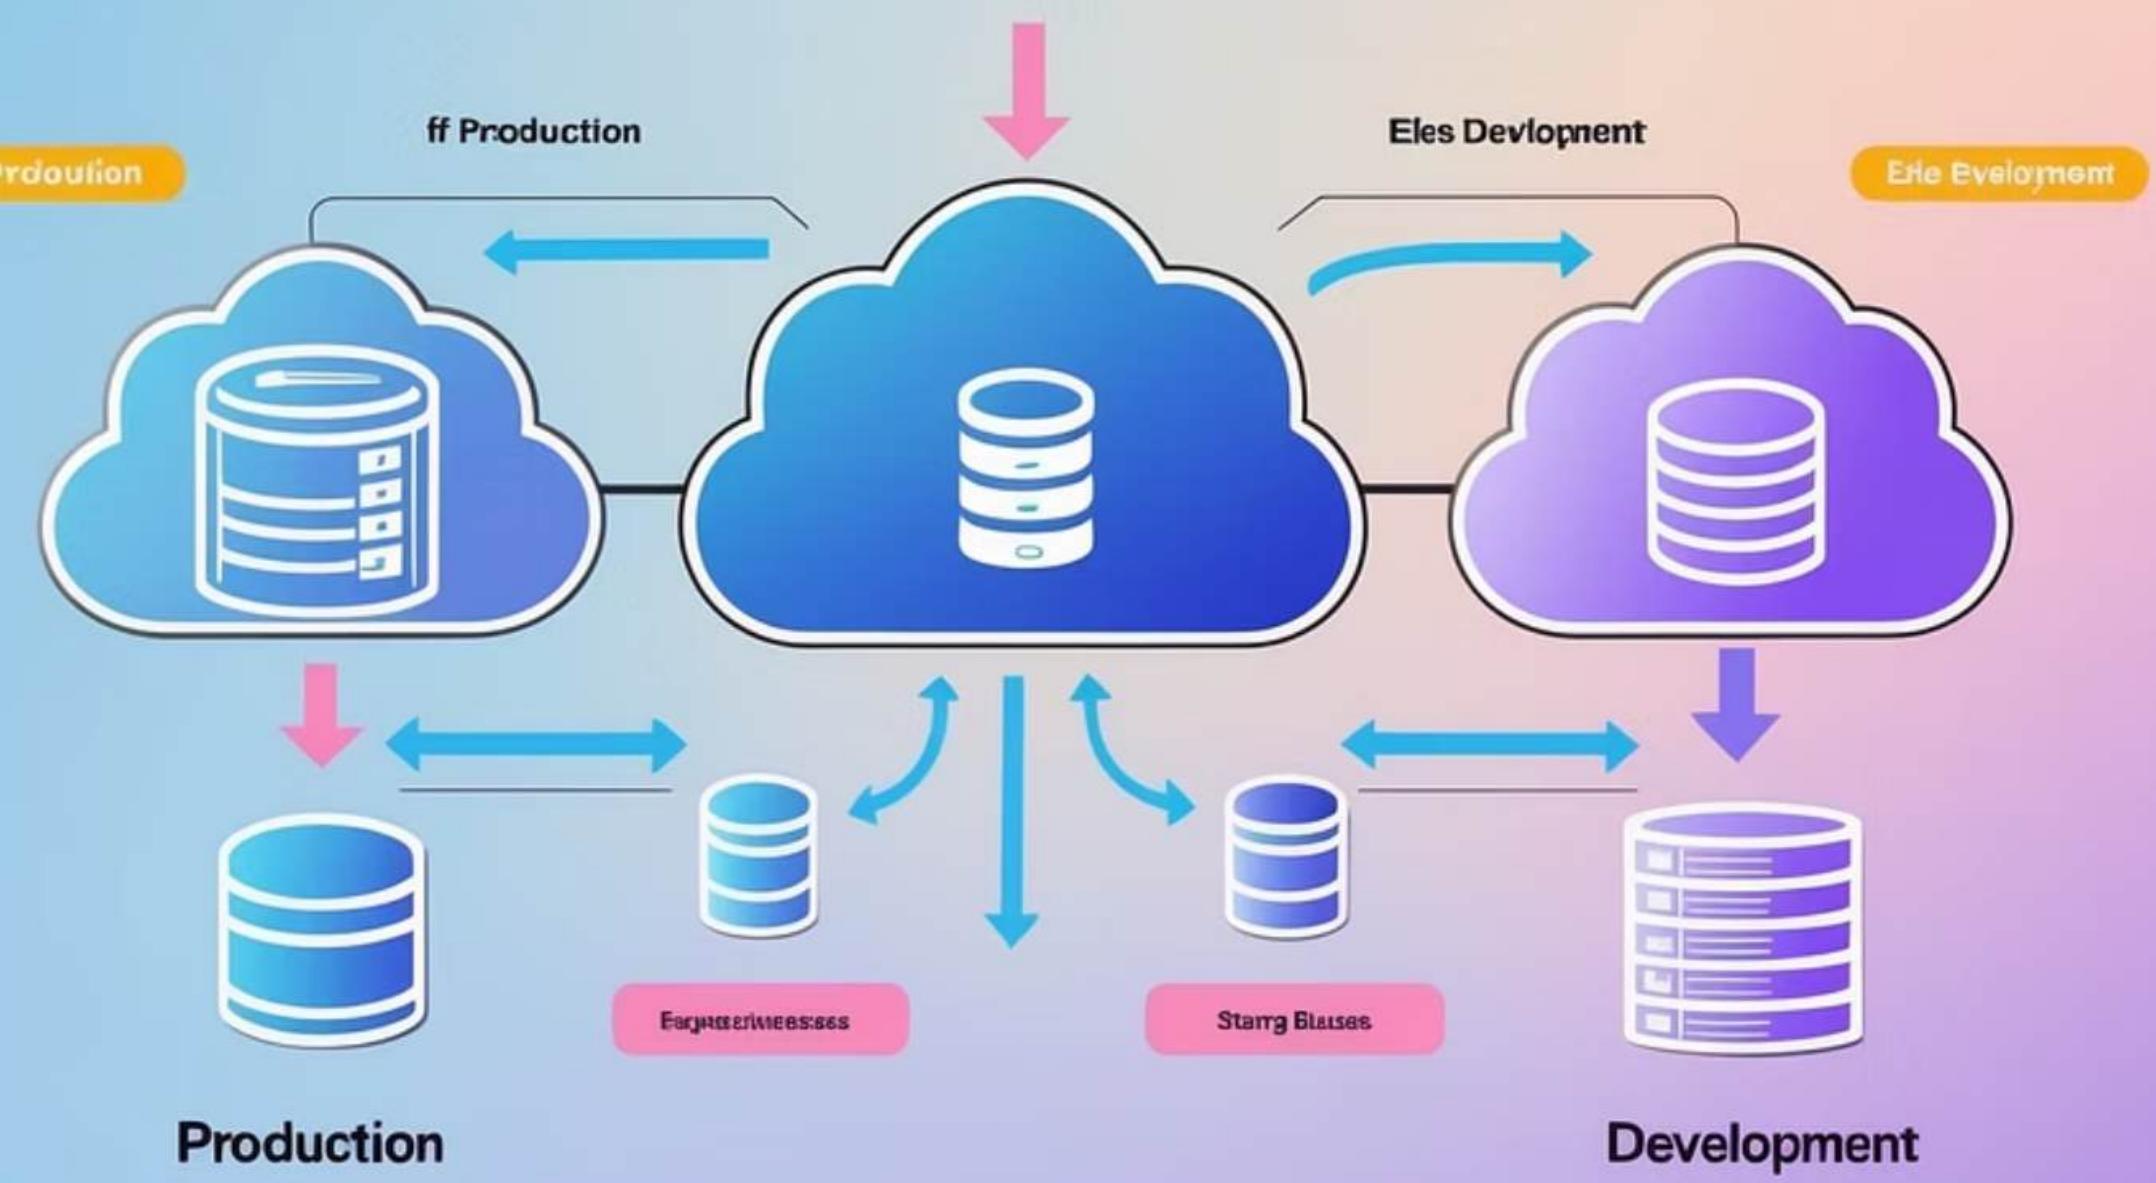

Store infrastructure code in Git repositories

Validation

Automatic checking of configurations before deployment

Deployment

Automated infrastructure changes with approval gates

Conditional Resource Creation

```

resource "azurerm_app_service_plan" "example" {
  count          = var.environment == "production" ? 1 : 0
  name           = "production-app-service-plan"
  location       = "East US"
  resource_group_name = azurerm_resource_group.example.name

  sku {
    tier = "Premium"
    size = "P1"
  }
}

```

Deploy resources only when needed using conditional expressions to optimize costs.

Azure Traffic Manager for global load balancing

Terraform code to route traffic to the closest location based on health and performance.

Traffic Manager Setup

Global Routing

Configure worldwide traffic distribution for applications

Routing Methods

Set up performance, priority, or weighted routing

Health Monitoring

Configure endpoint health checks for automatic failover

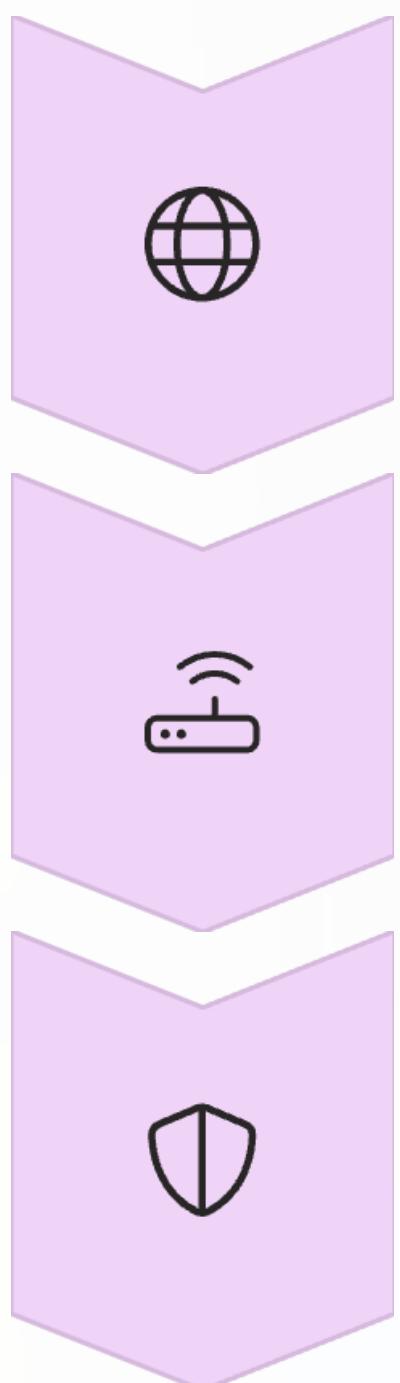

Bastion Host Deployment

```
resource "azurerm_bastion_host" "example" {  
    name          = "example-bastion"  
    location      = "East US"  
    resource_group_name =  
        azurerm_resource_group.example.name  
  
    ip_configuration {  
        name          = "configuration"  
        subnet_id     =  
            azurerm_subnet.example.id  
        public_ip_address_id =  
            azurerm_public_ip.example.id  
    }  
}
```

Deploy secure remote access to VMs without exposing them to public networks.

Front Door Implementation

Global CDN

Deploy content delivery network infrastructure

Routing Rules

Configure traffic distribution and forwarding

WAF at Edge

Implement security policies closer to users

VPN Gateway Automation

```
resource "azurerm_virtual_network_gateway"
"example" {
    name                  = "example-vpn-gateway"
    location              = "East US"
    resource_group_name  =
azurerm_resource_group.example.name
    type                  = "Vpn"
    vpn_type              = "RouteBased"
    sku                  = "VpnGw1"

    ip_configuration {
        name          = "vnetGatewayConfig"
        subnet_id     =
azurerm_subnet.example.id
        public_ip_address_id =
azurerm_public_ip.example.id
    }
}
```

Deploy site-to-site and point-to-site VPN connections for secure access.

Disk Encryption Setup

VM Disk Encryption

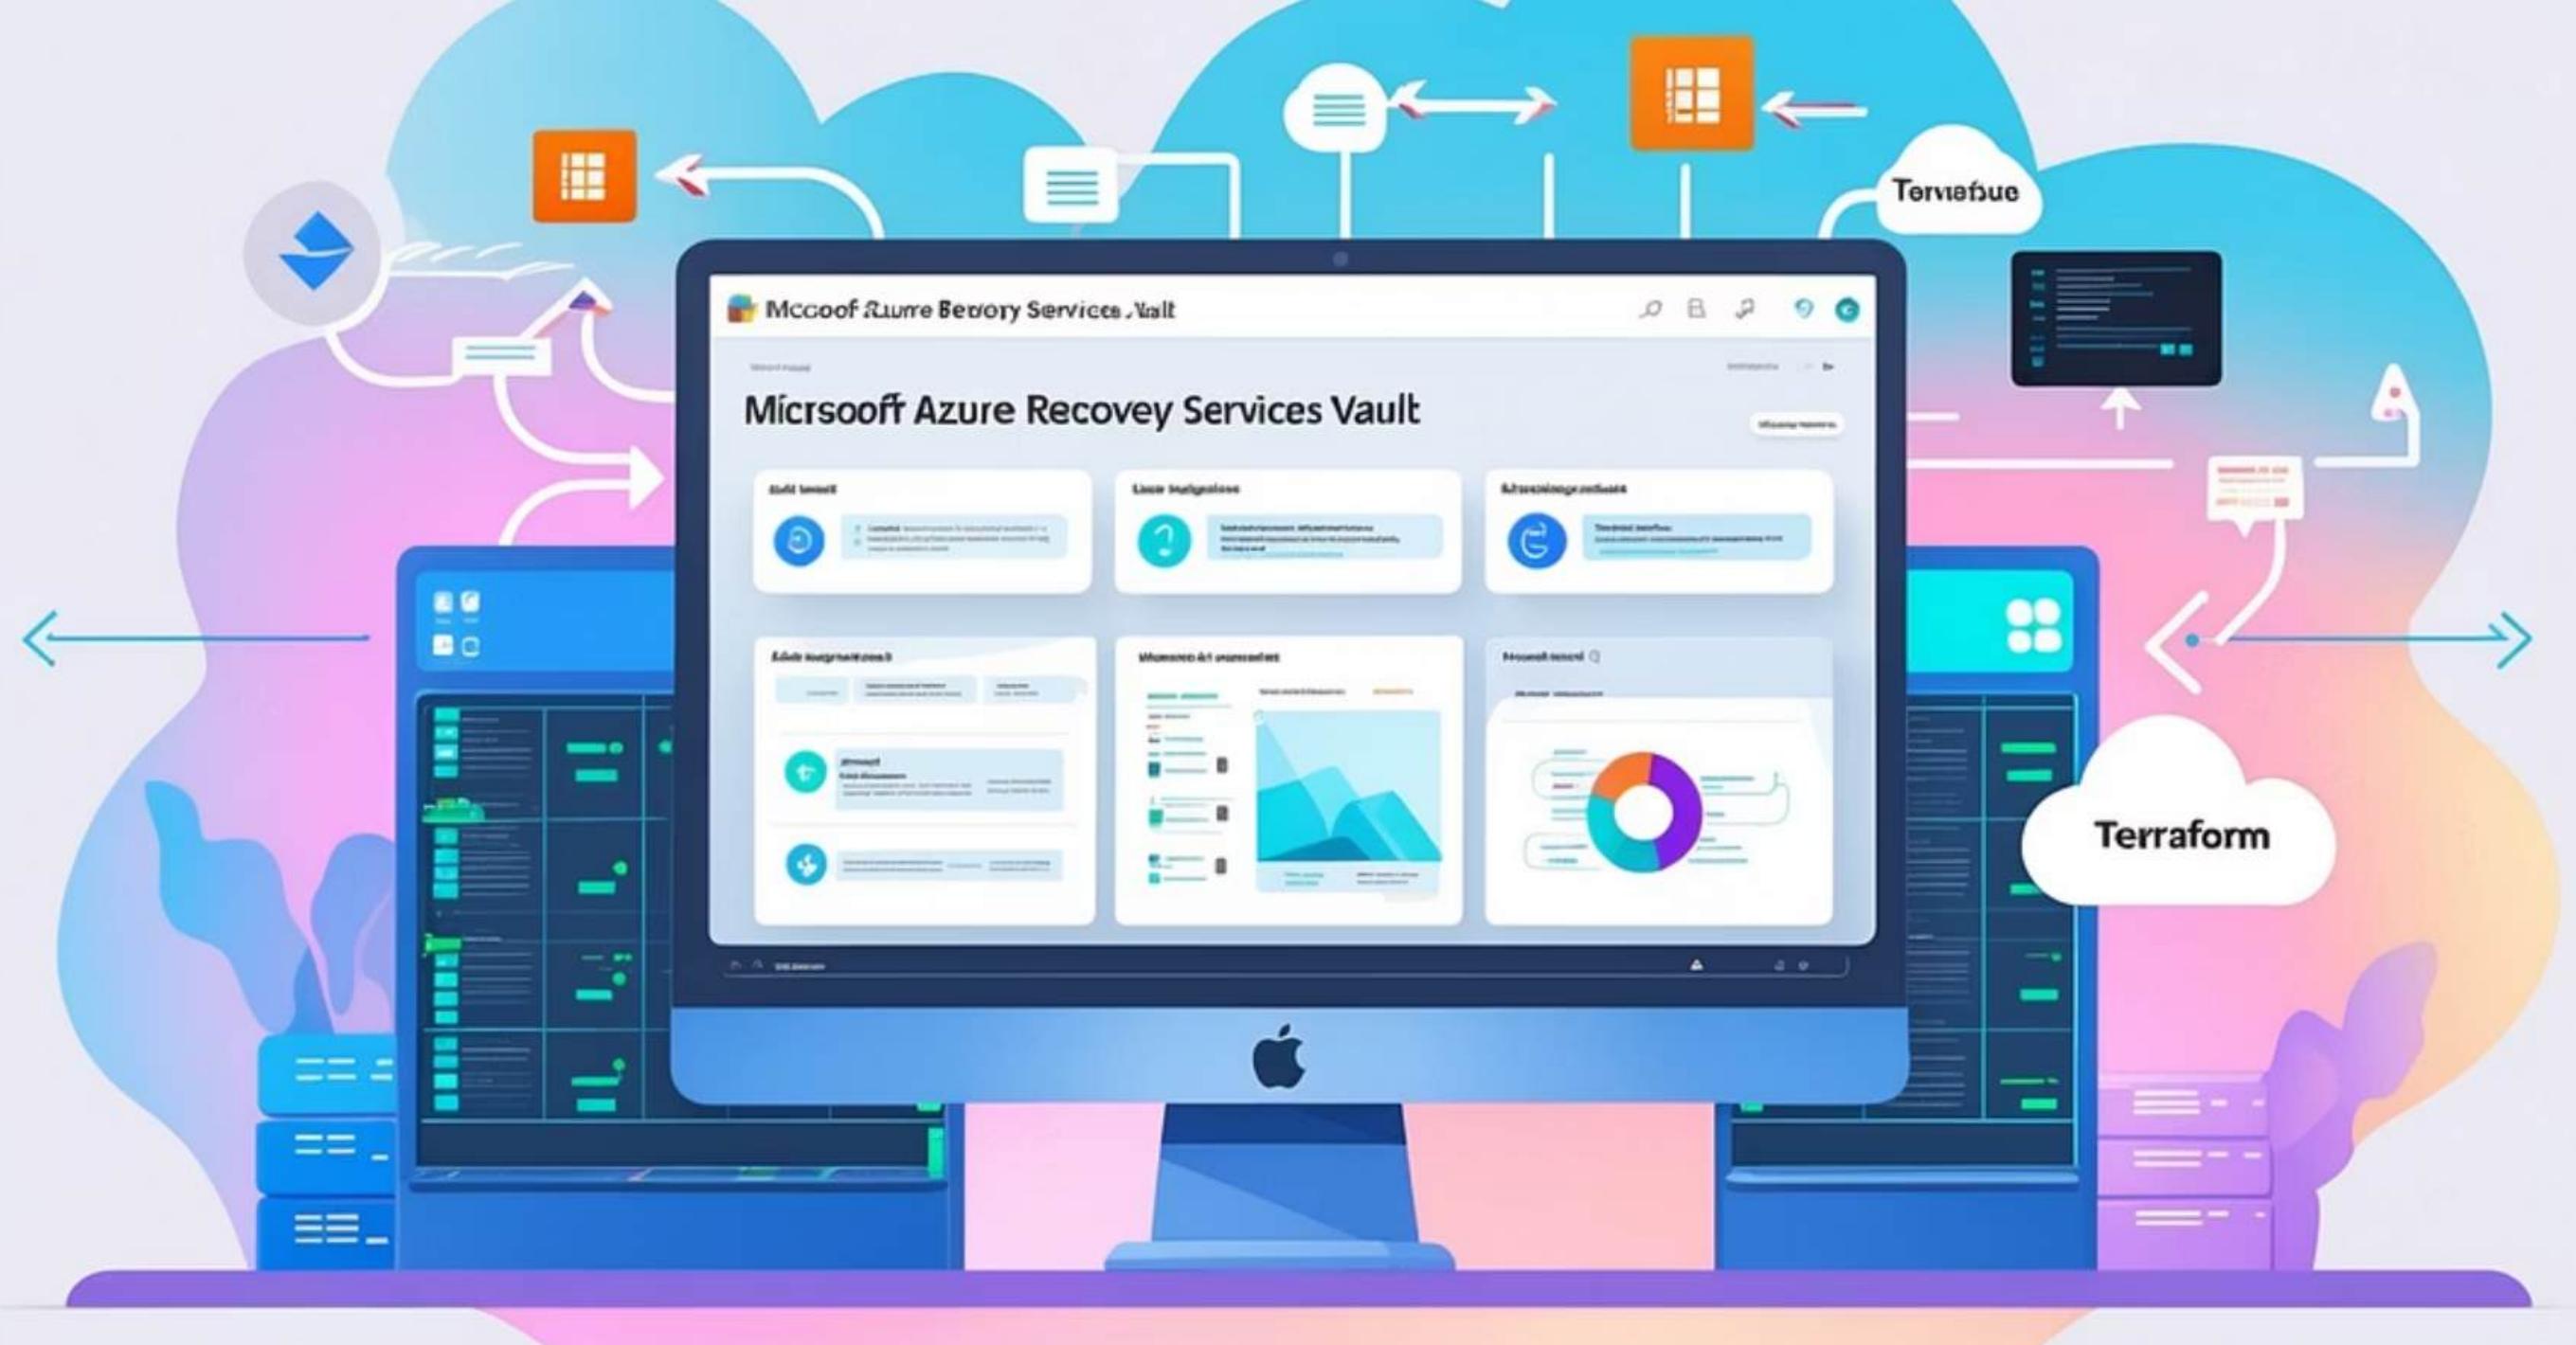

Configure automatic encryption for VM disks

Key Vault Integration

Use customer-managed keys for enhanced security

Compliance Ready

Meet regulatory requirements with automated encryption

Recovery Services Vault

```

resource "azurerm_recovery_services_vault" "example" {
  name          = "example-recovery-vault"
  location      = "East US"
  resource_group_name =
  azurerm_resource_group.example.name
  sku           = "Standard"
  soft_delete_enabled = true
}

```

Deploy backup infrastructure with consistent policies and geo-redundant storage.

Policy Assignments

Governance Rules

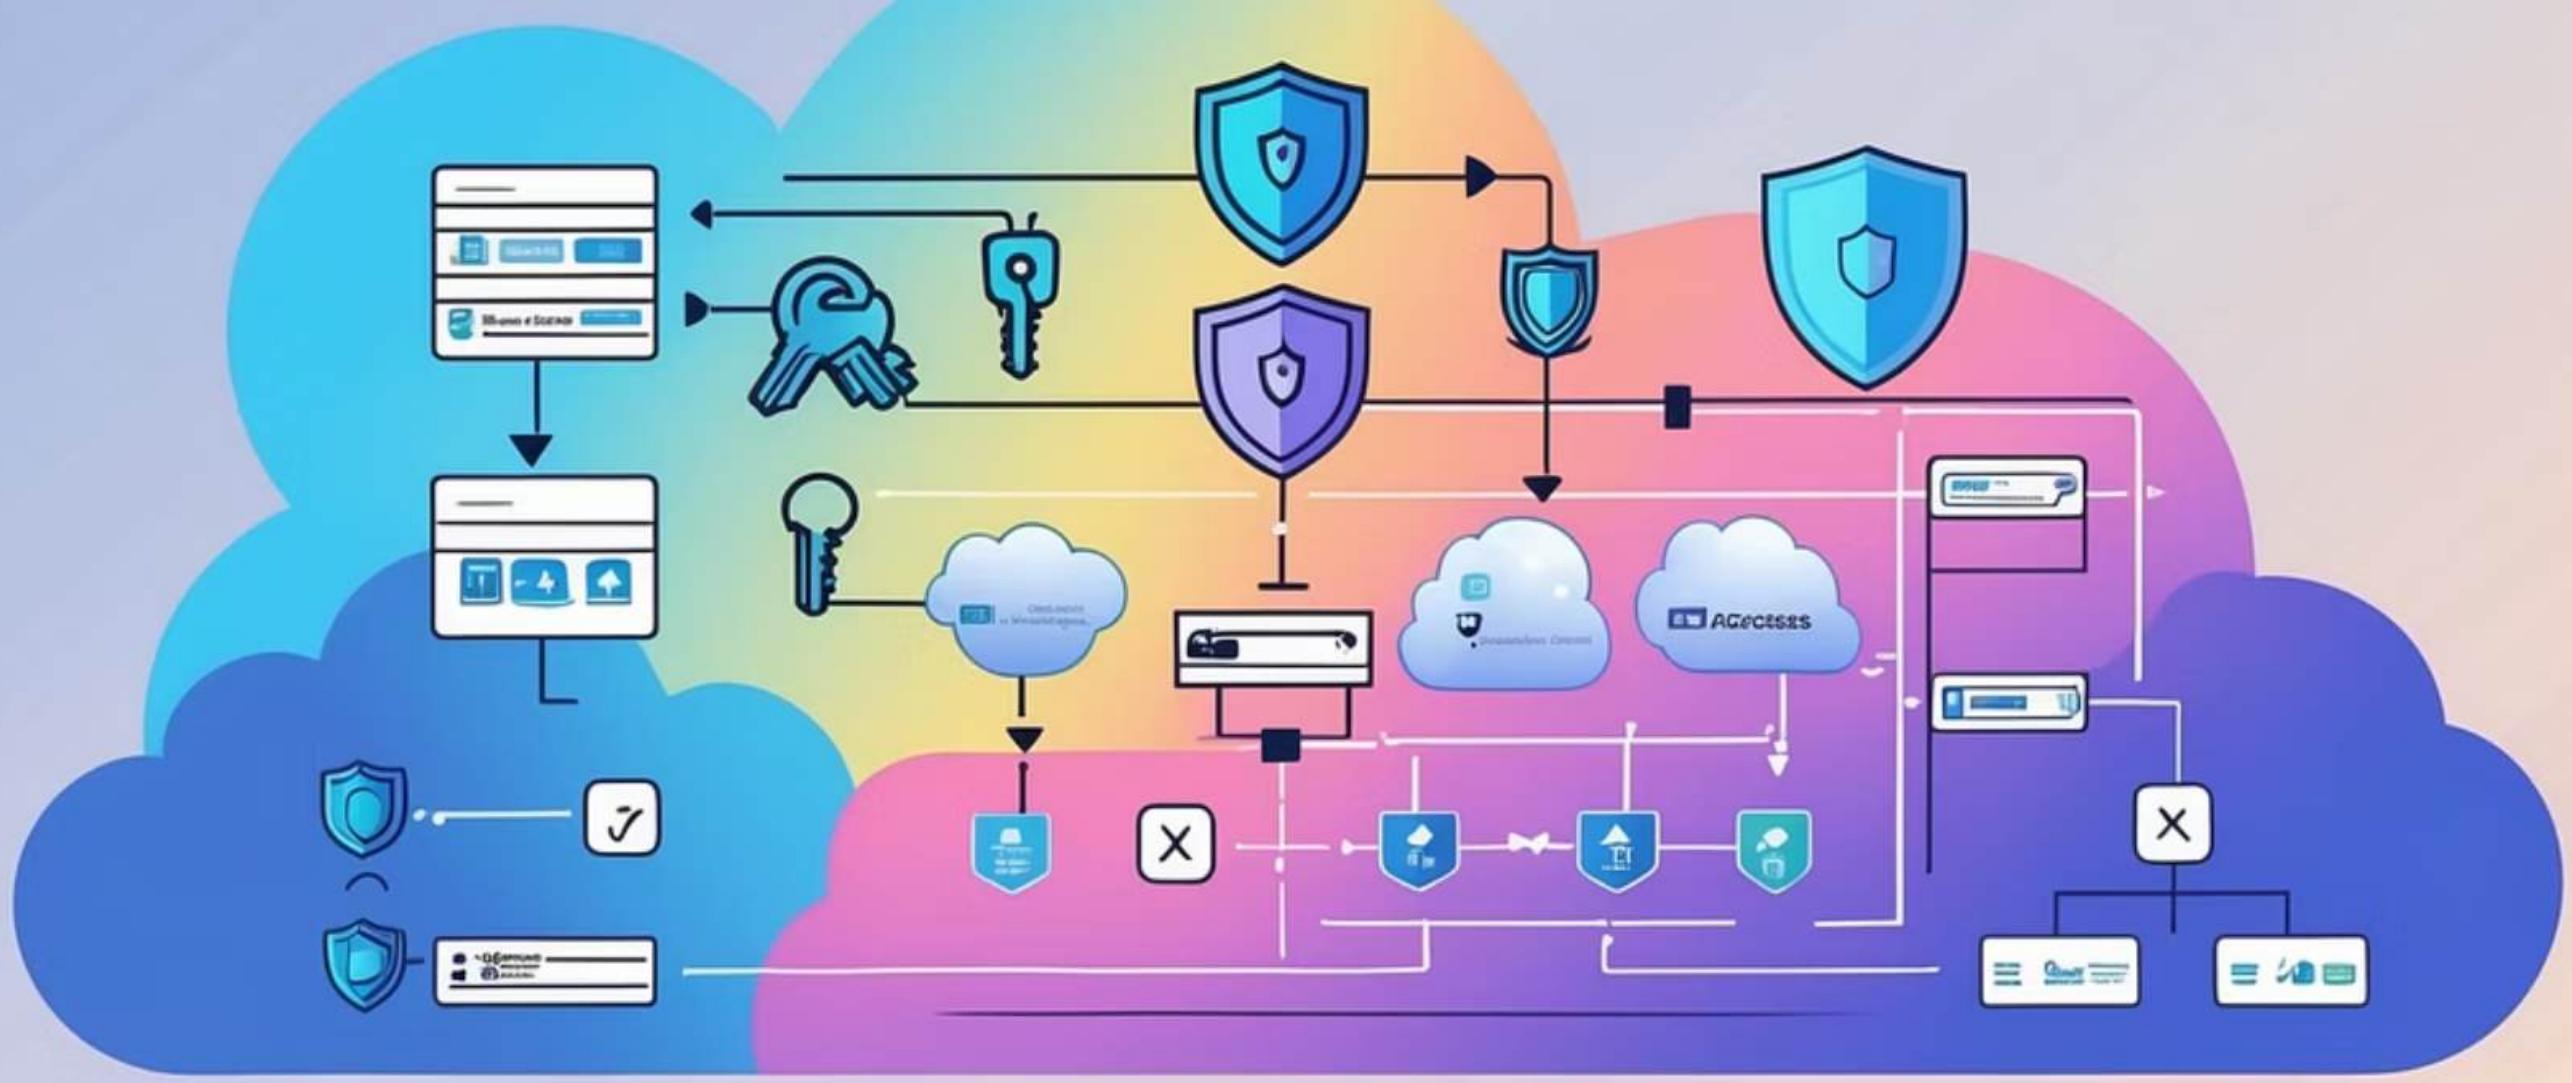

Deploy compliance policies as infrastructure code

Resource Auditing

Automatically check resources against standards

Auto-Remediation

Configure automatic fixing of non-compliant resources

RBAC Role Assignments

```

resource "azurerm_role_definition" "example" {
    name      = "custom-role"
    scope     = data.azurerm_subscription.primary.id
    description = "Custom role with limited permissions"

    permissions {
        actions      =
            ["Microsoft.Resources/subscriptions/resourceGroups/read"]
        not_actions = []
    }

    assignable_scopes = [
        data.azurerm_subscription.primary.id
    ]
}

```

Create custom RBAC roles and assign permissions programmatically.

Terraform Plan in CI/CD

Pre-Deployment Validation

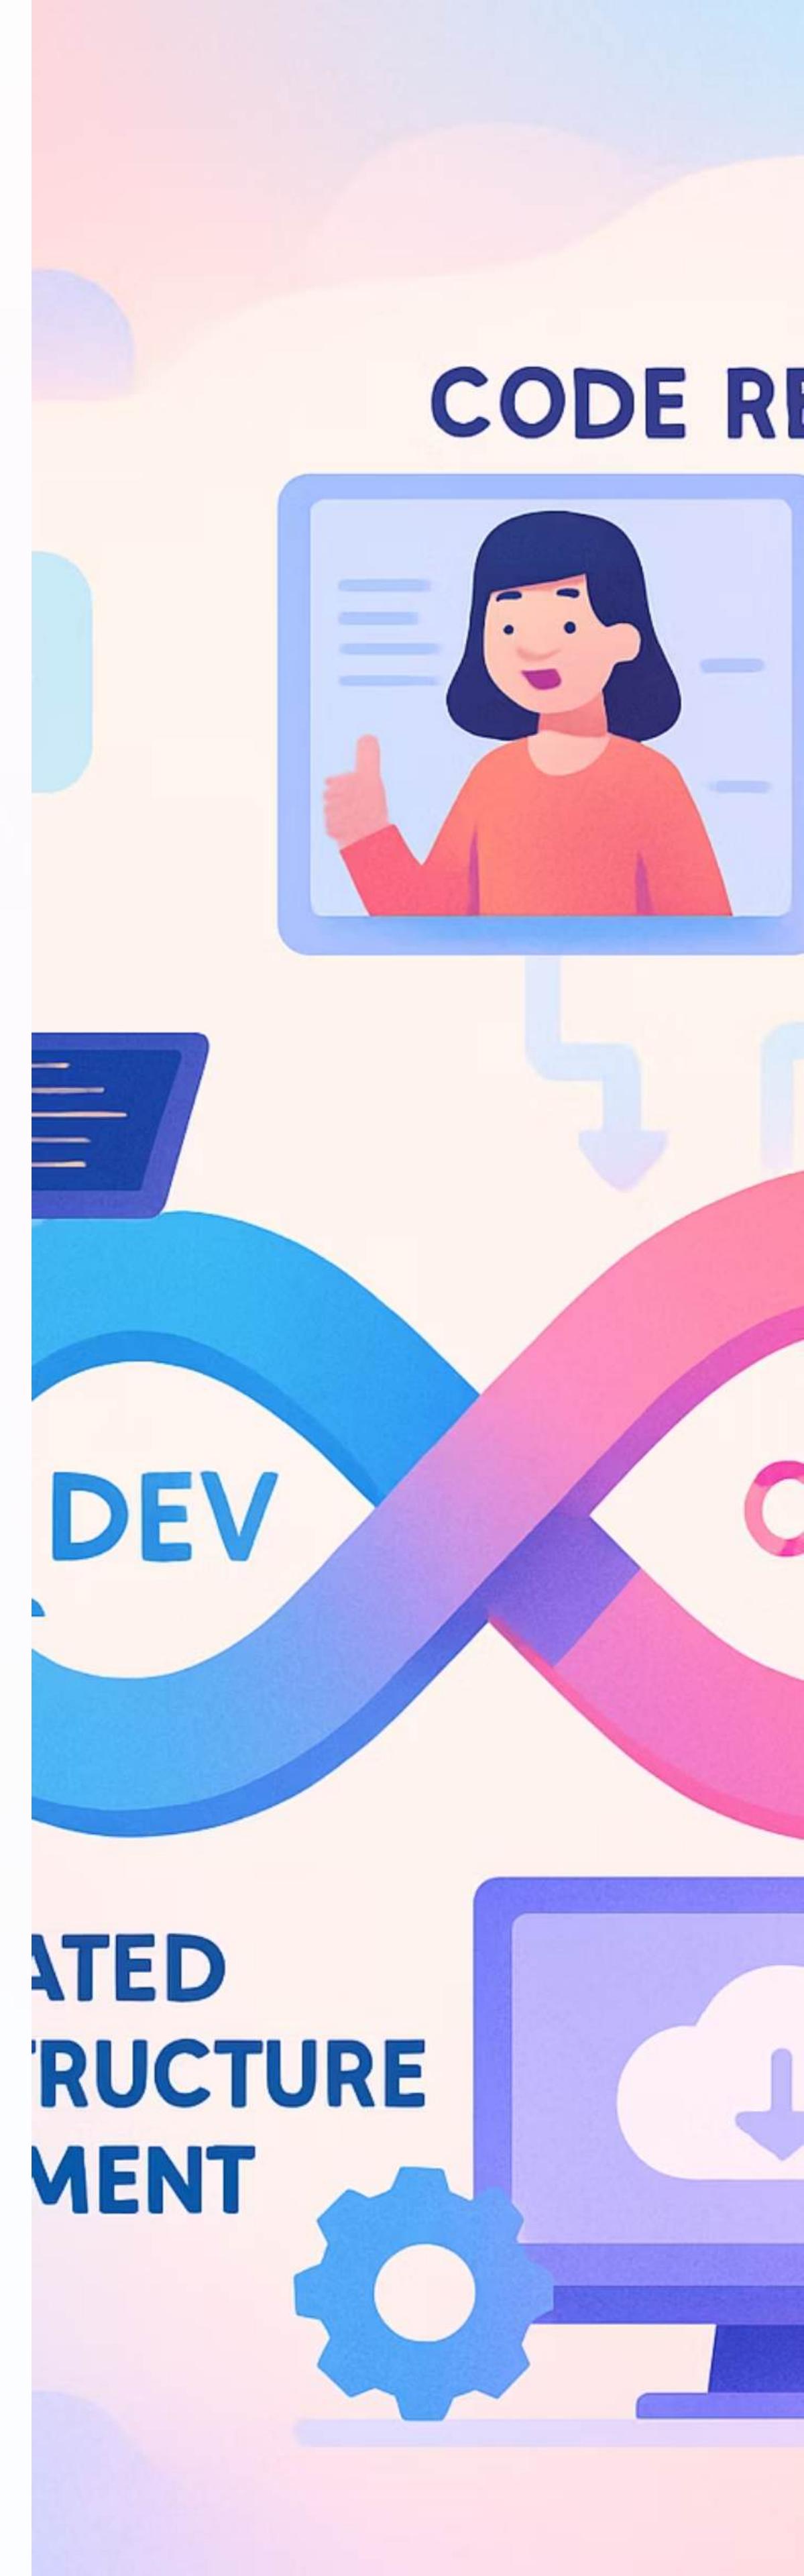

Verify changes before applying to production

Documentation Generation

Create change reports from plan output

Approval Workflows

Implement review gates for infrastructure changes

Private Link Configuration

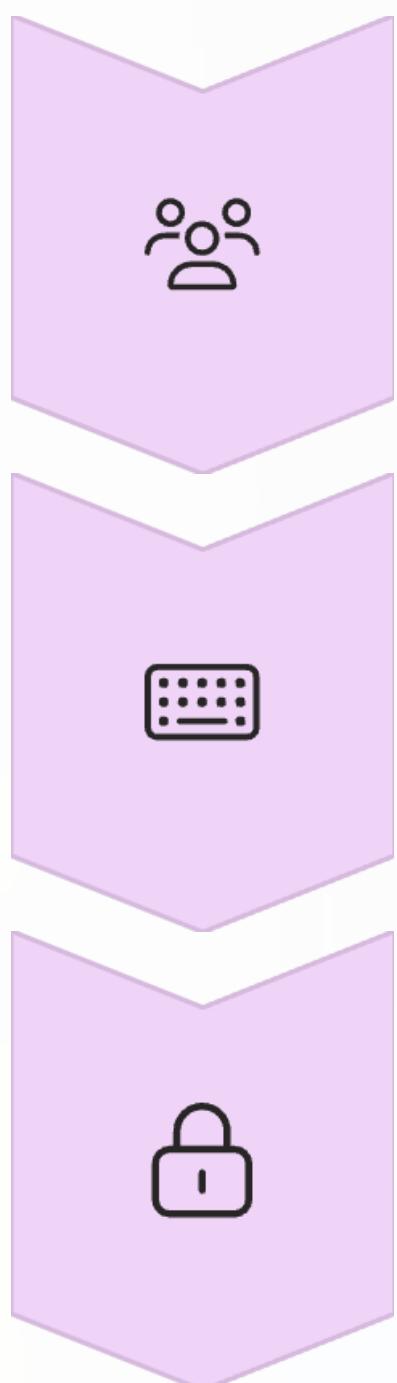

```
resource "azurerm_private_endpoint" "example" {
    name                  = "example-endpoint"
    location              = "East US"
    resource_group_name   =
    azurerm_resource_group.example.name
    subnet_id              =
    azurerm_subnet.example.id

private_service_connection {
    name                  = "example-
privateserviceconnection"
    private_connection_resource_id =
    azurerm_sql_server.example.id
    subresource_names      =
    ["sqlServer"]
    is_manual_connection   = false
}
`
```

Expose Azure services over private endpoints for enhanced security.

Managed Identity Setup

Identity Types

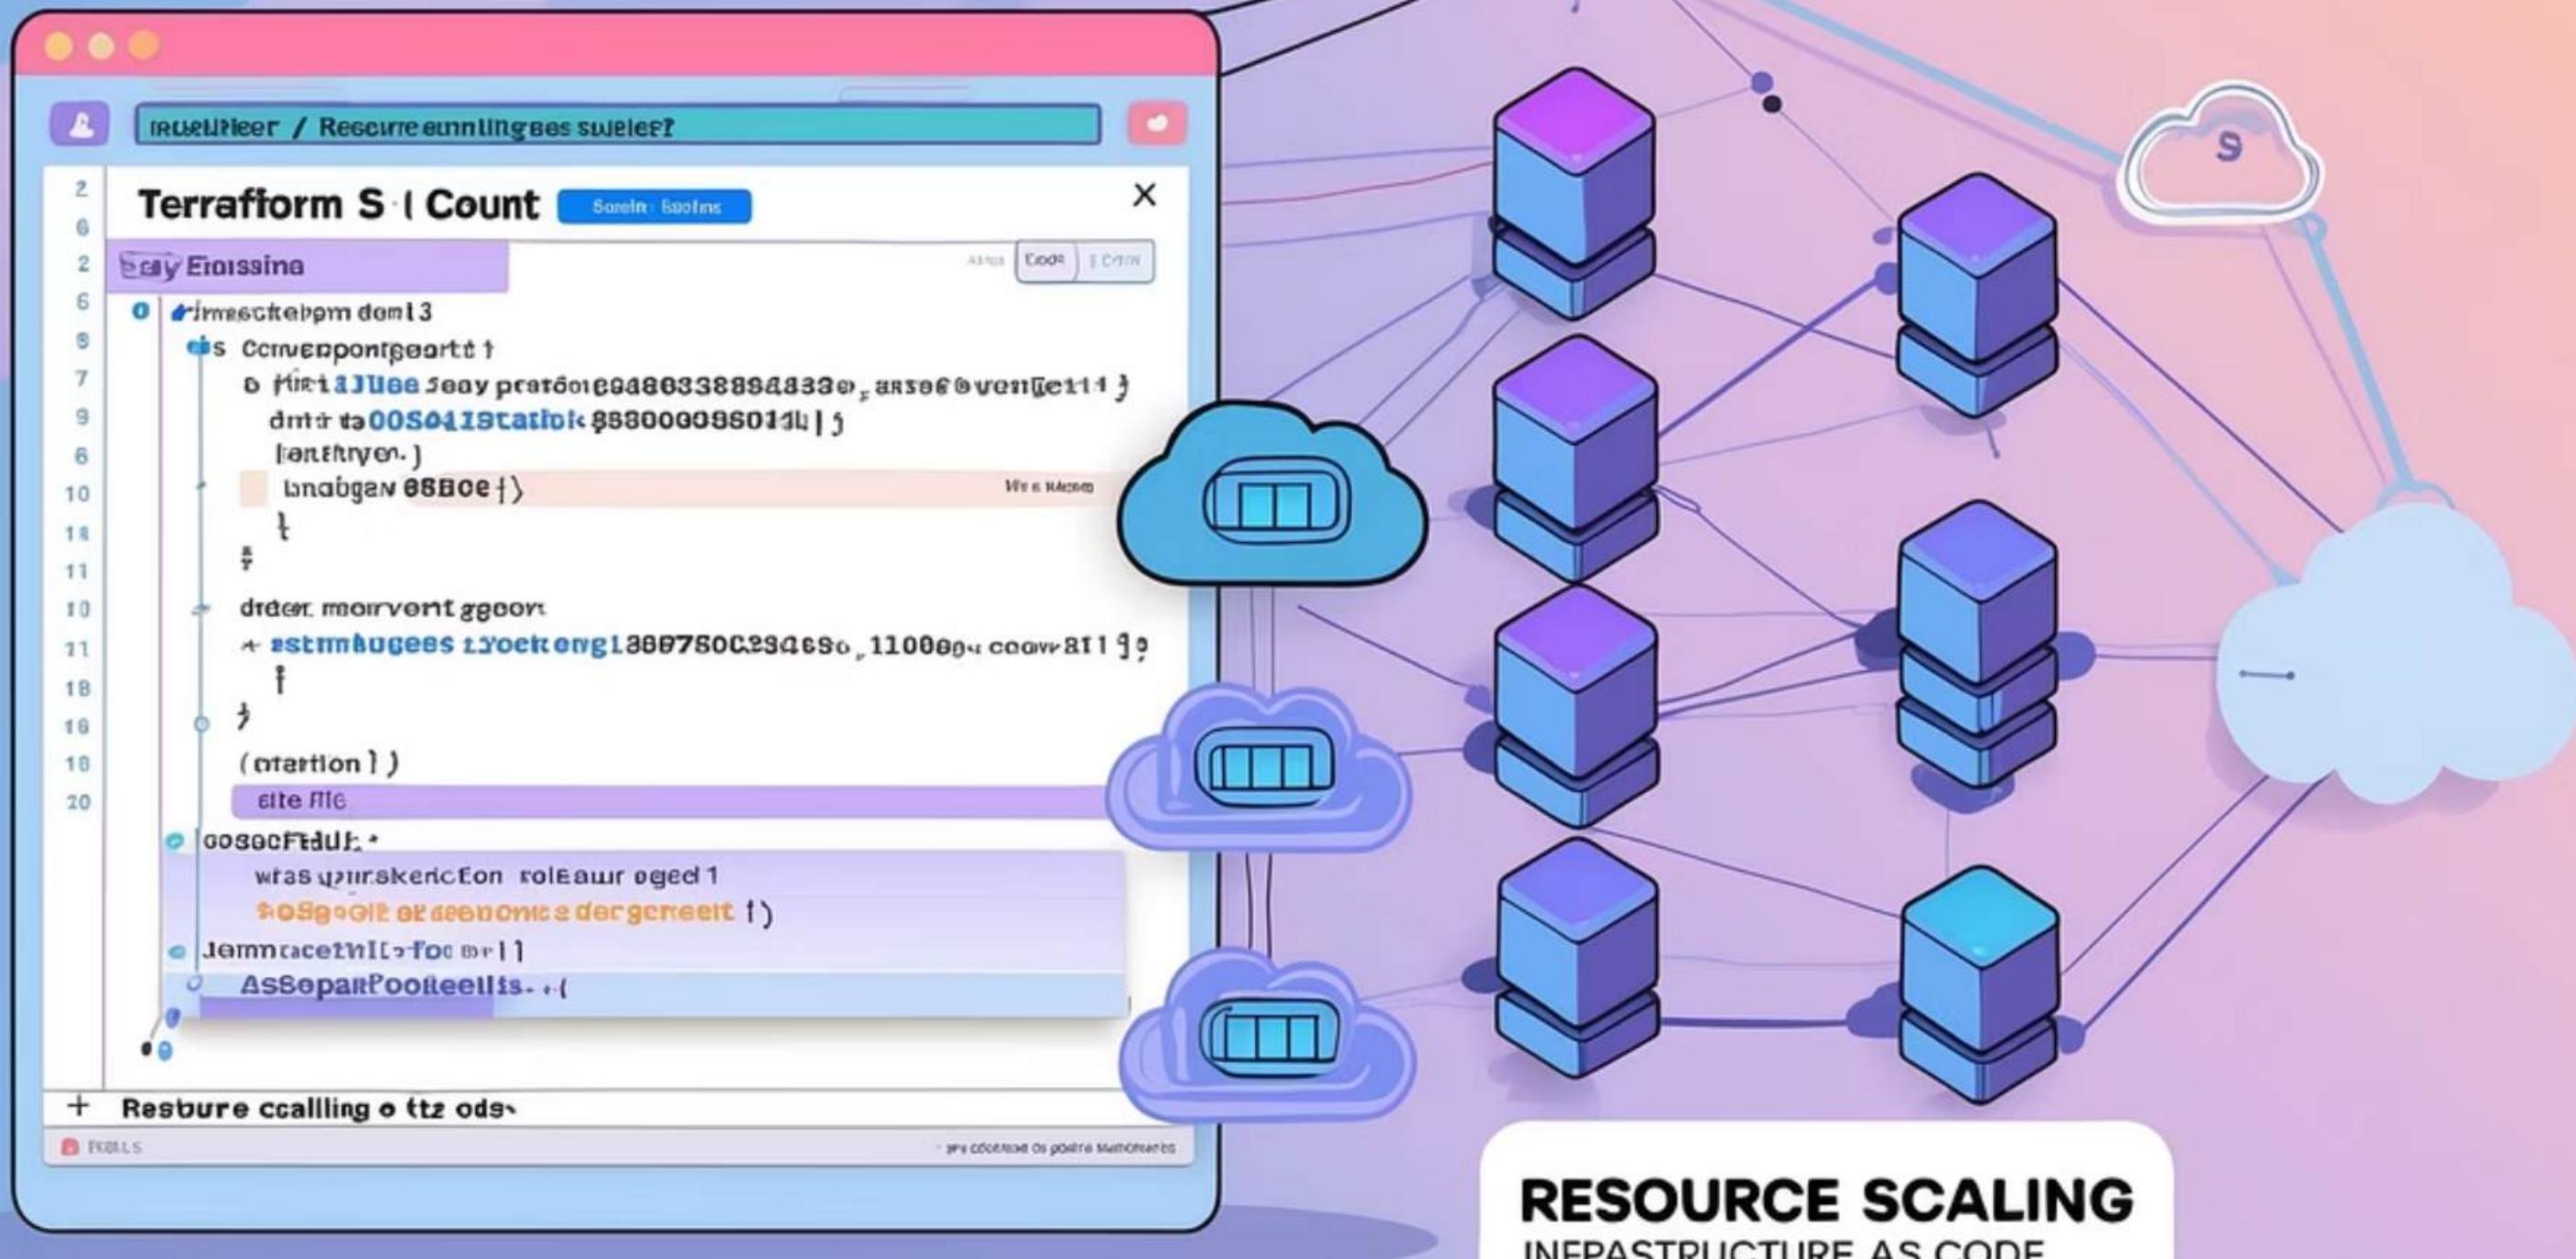

Configure system or user-assigned identities

No Credentials

Eliminate the need to manage service principals

Secure Access

Access Azure resources without storing secrets

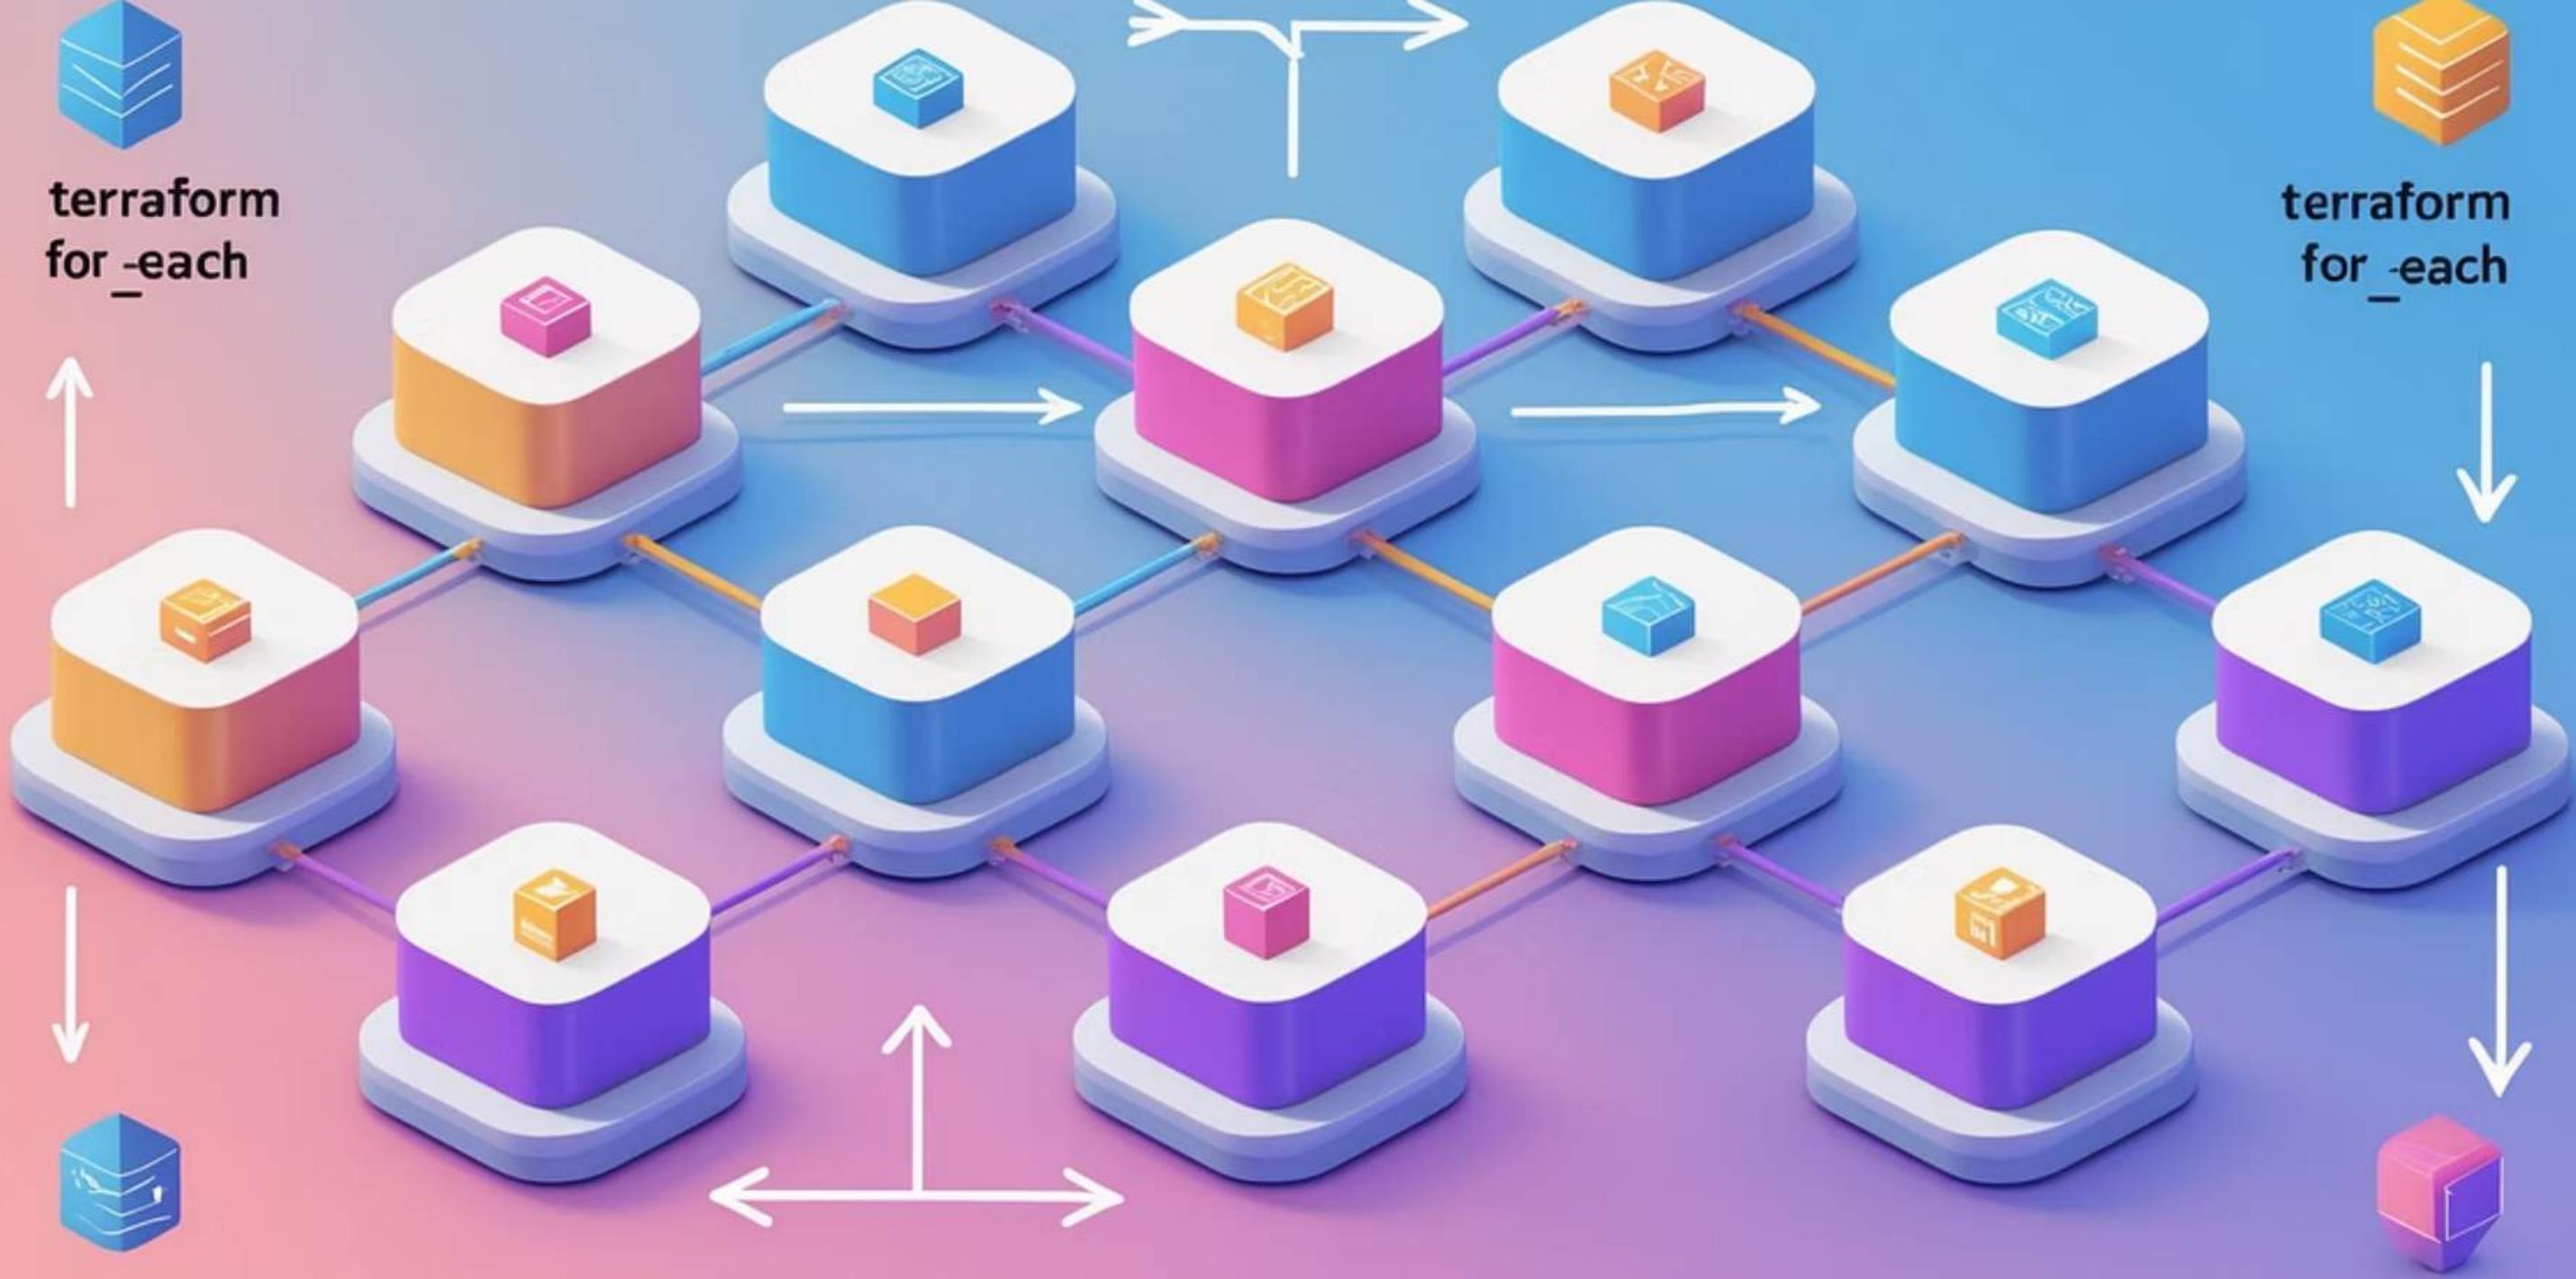

RESOURCE SCALING INFRASTRUCTURE AS CODE

Resource Scaling with Count

```
resource "azurerm_public_ip" "example" {
    count          = 3
    name          = "example-pip-${count.index}"
    location      = "East US"
    resource_group_name =
        azurerm_resource_group.example.name
    allocation_method = "Static"
    sku            = "Standard"
}
```

Deploy multiple similar resources efficiently with the count parameter.

For_each for Collections

Map or Set Input

Deploy resources from a collection of values

Individual Updates

Modify specific resources without affecting others

Dynamic Creation

Generate infrastructure based on changing requirements

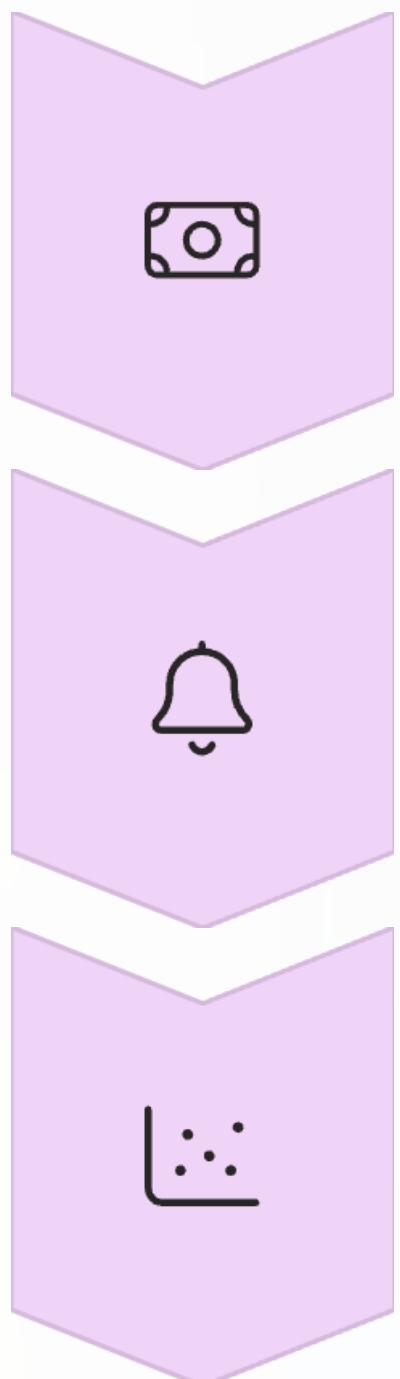

Data Sources

```
data "azurerm_virtual_network" "example" {  
    name          = "existing-network"  
    resource_group_name = "existing-resources"  
}  
  
resource "azurerm_subnet" "example" {  
    name          = "example-subnet"  
    resource_group_name = "existing-resources"  
    virtual_network_name =  
        data.azurerm_virtual_network.example.name  
    address_prefixes      = ["10.0.1.0/24"]  
}
```

Query existing Azure resources to integrate with manual infrastructure.

Budget Alerts Setup

Spending Limits

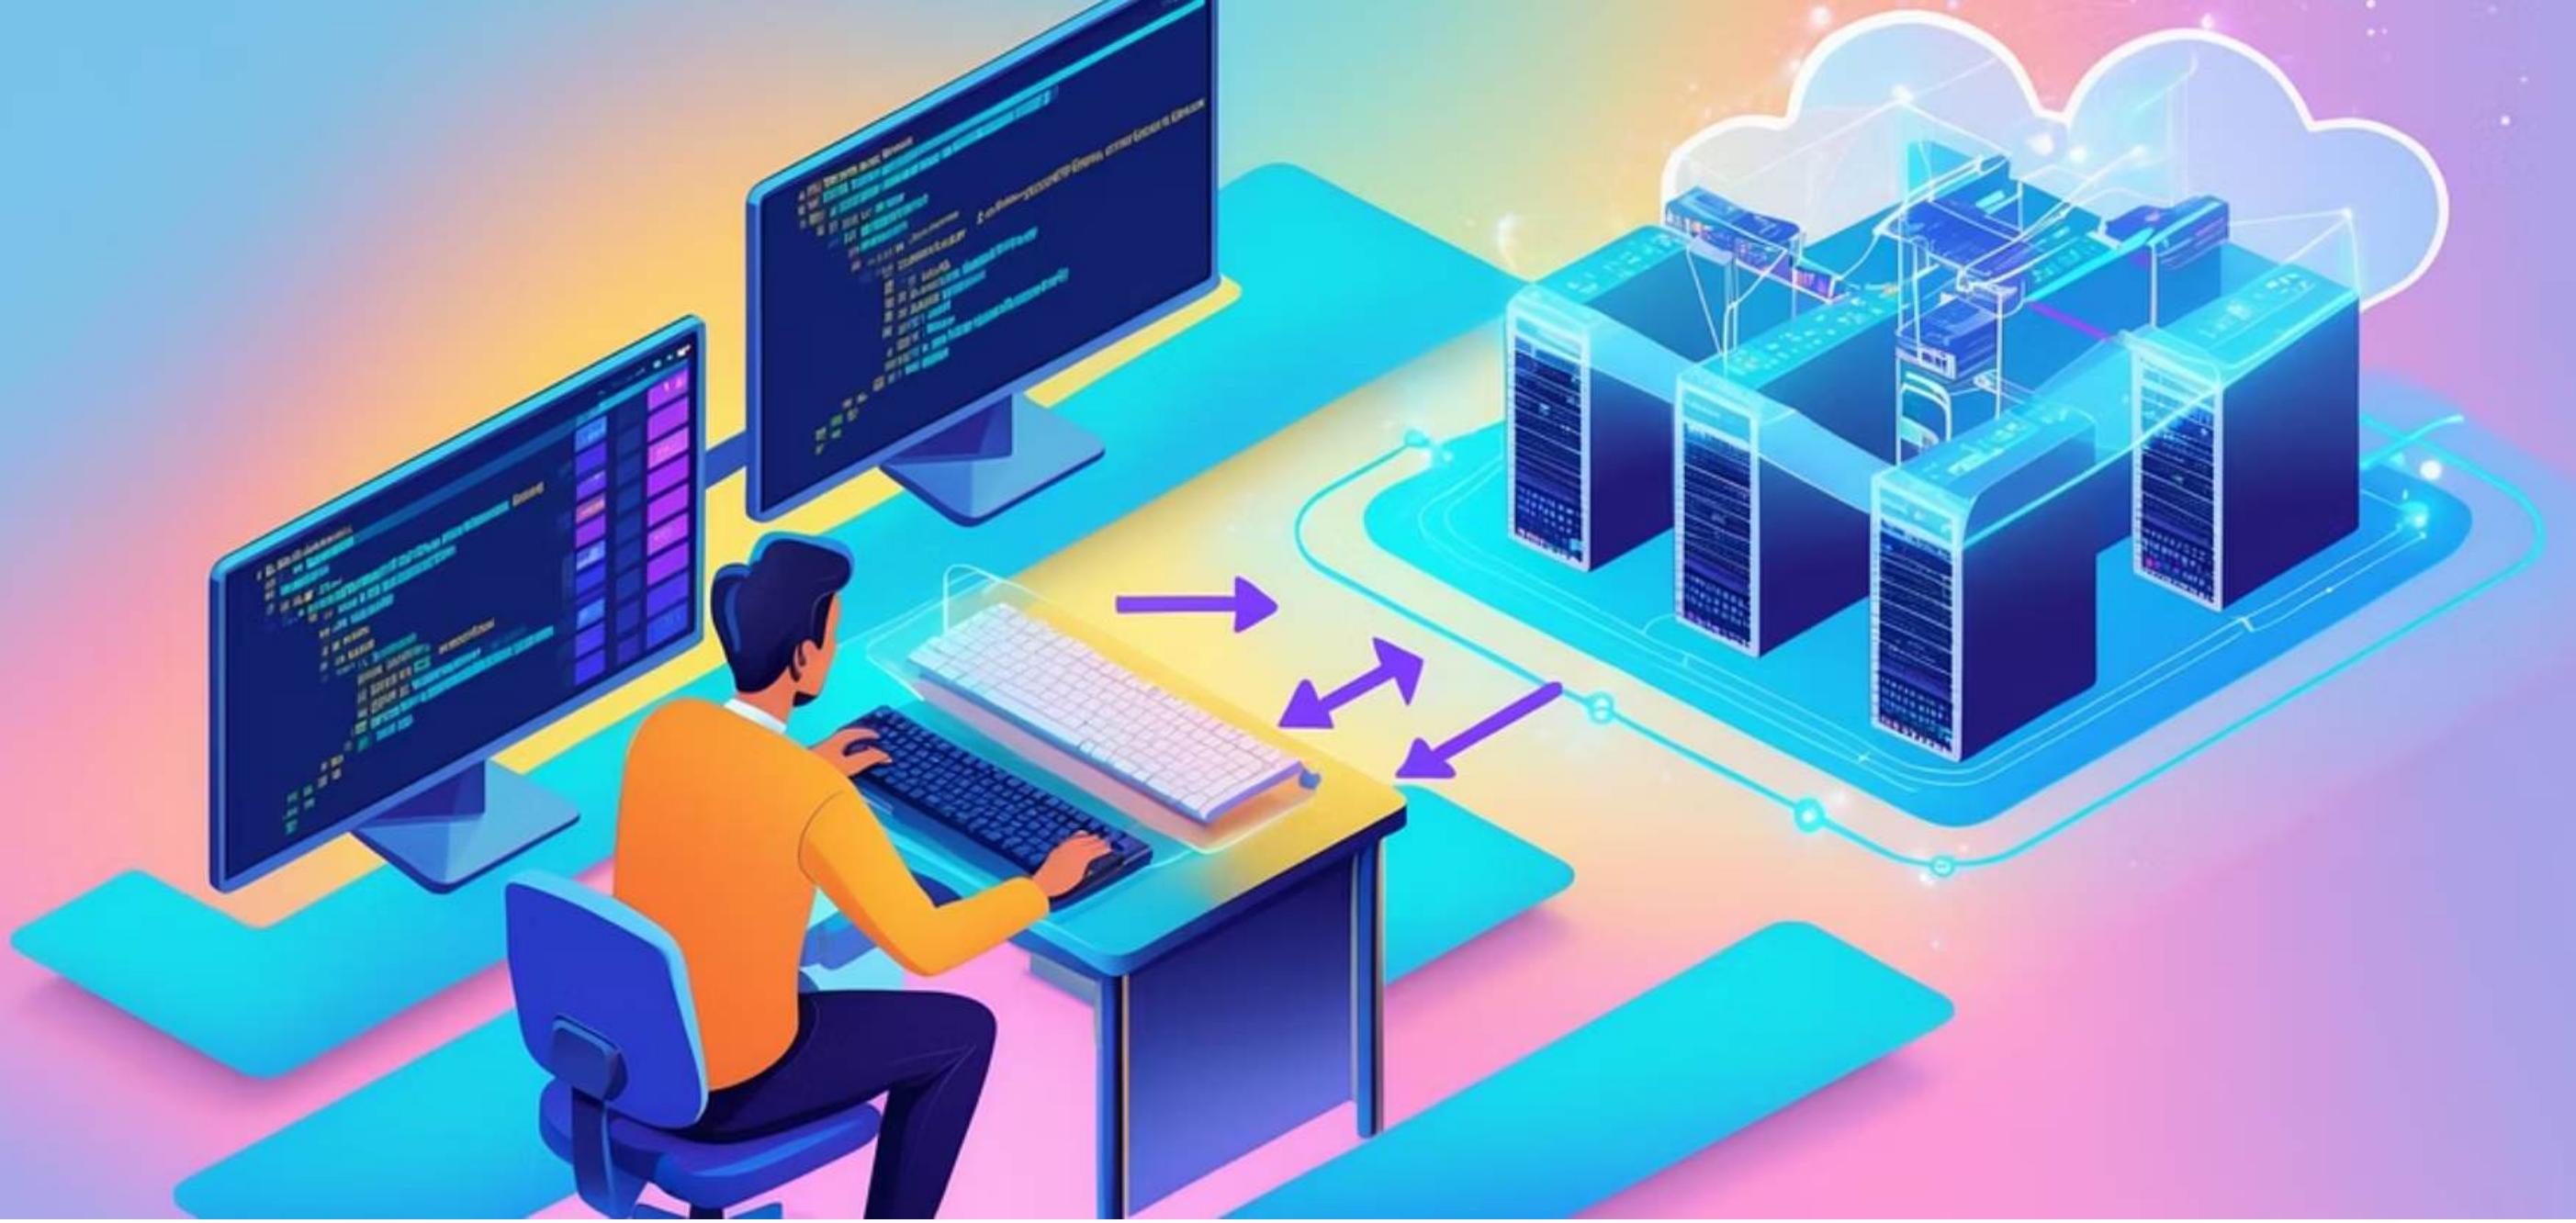

Configure budget thresholds for resources

Notifications

Set up alerts when spending approaches limits

Usage Tracking

Monitor resource consumption patterns over time

Terraform Import

```
# Command line: terraform import  
azurerm_resource_group.example /subscriptions/00000000-  
0000-0000-0000-000000000000/resourceGroups/example  
  
resource "azurerm_resource_group" "example" {  
    name      = "example"  
    location  = "East US"  
    tags      = {  
        environment = "production"  
    }  
}
```

Bring existing resources under Terraform management without recreation.

CAREER GAPS? NO CODING SKILLS?

@CareerByteCode

CareerByteCode
Learning Made simple

Real Mentorship. Real Growth.

 **WHERE TECH CAREERS
ARE BUILT** 

Join one of the world's largest
platforms for real-time tech project
experience.

Your future in tech starts here.

SWIPE

700+ REAL-WORLD PROJECTS

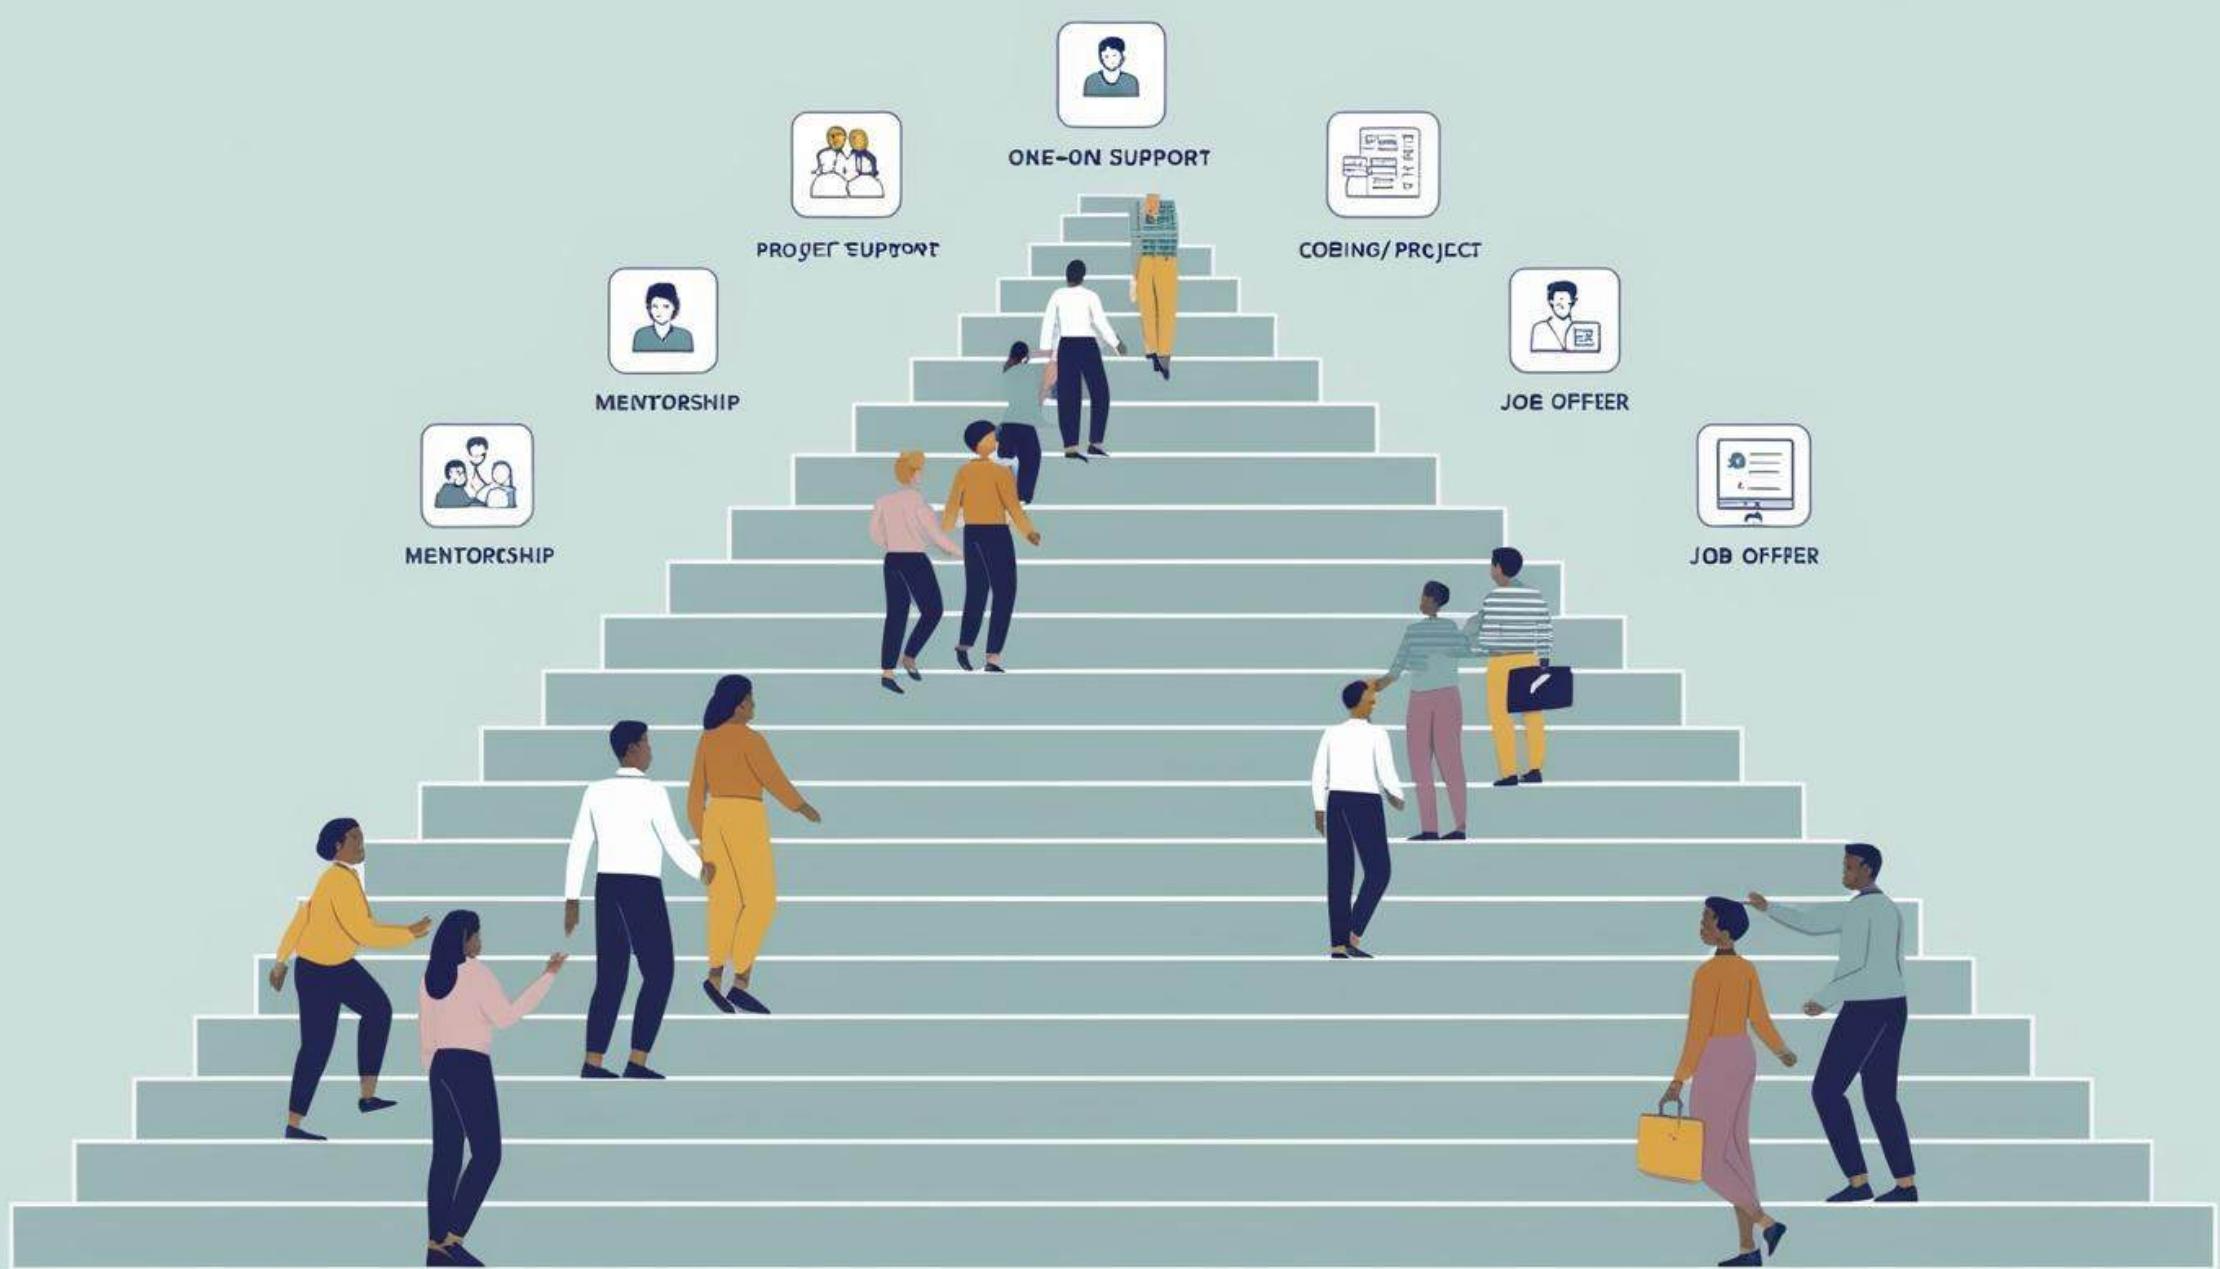

Learn, build, and deploy like a pro
with hands-on experience that
mirrors real industry environments.

🔥 It's time to bridge the gap between theory & practice!

SWIPE

What Makes CareerByteCode Different?

What Makes CareerBytocode Different?

- Deep-dive learning
- Real-time project experience
- 1:1 career guidance
- Gap recovery support
- Job readiness training
- Removing Interview Speaking fear
- Mock Interviews

I feel lost. I don't know where to begin.

We guide learners step-by-step. Clear path, clear plan, regular check-ins.

I'm scared of coding. I think I can't learn it.

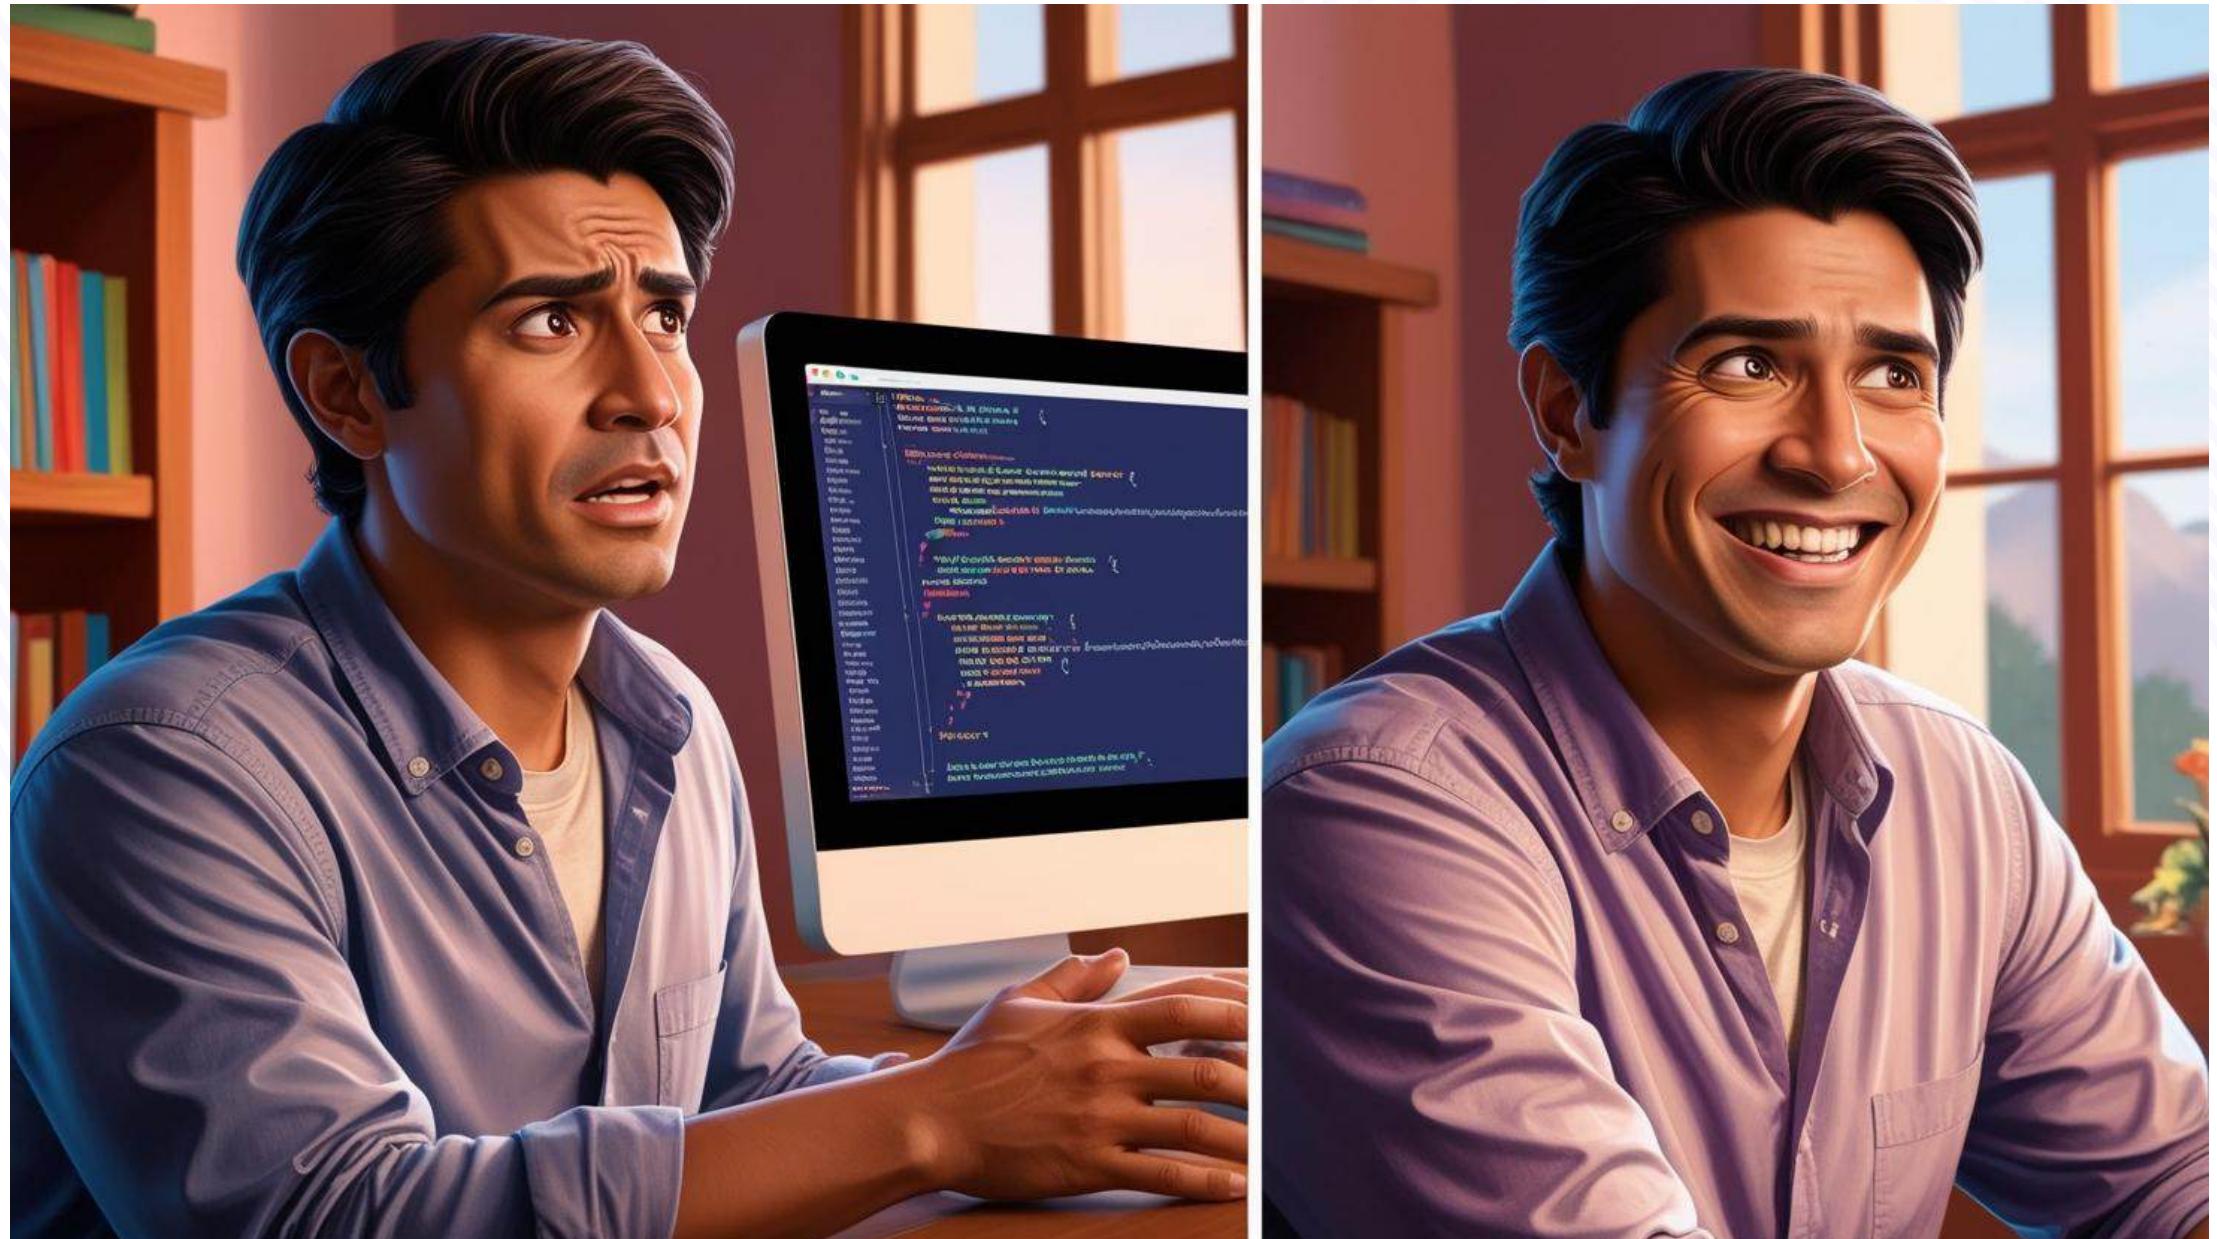

We start with basics. Daily practice. Small wins. Confidence grows.

I learned theory but can't work on real projects.

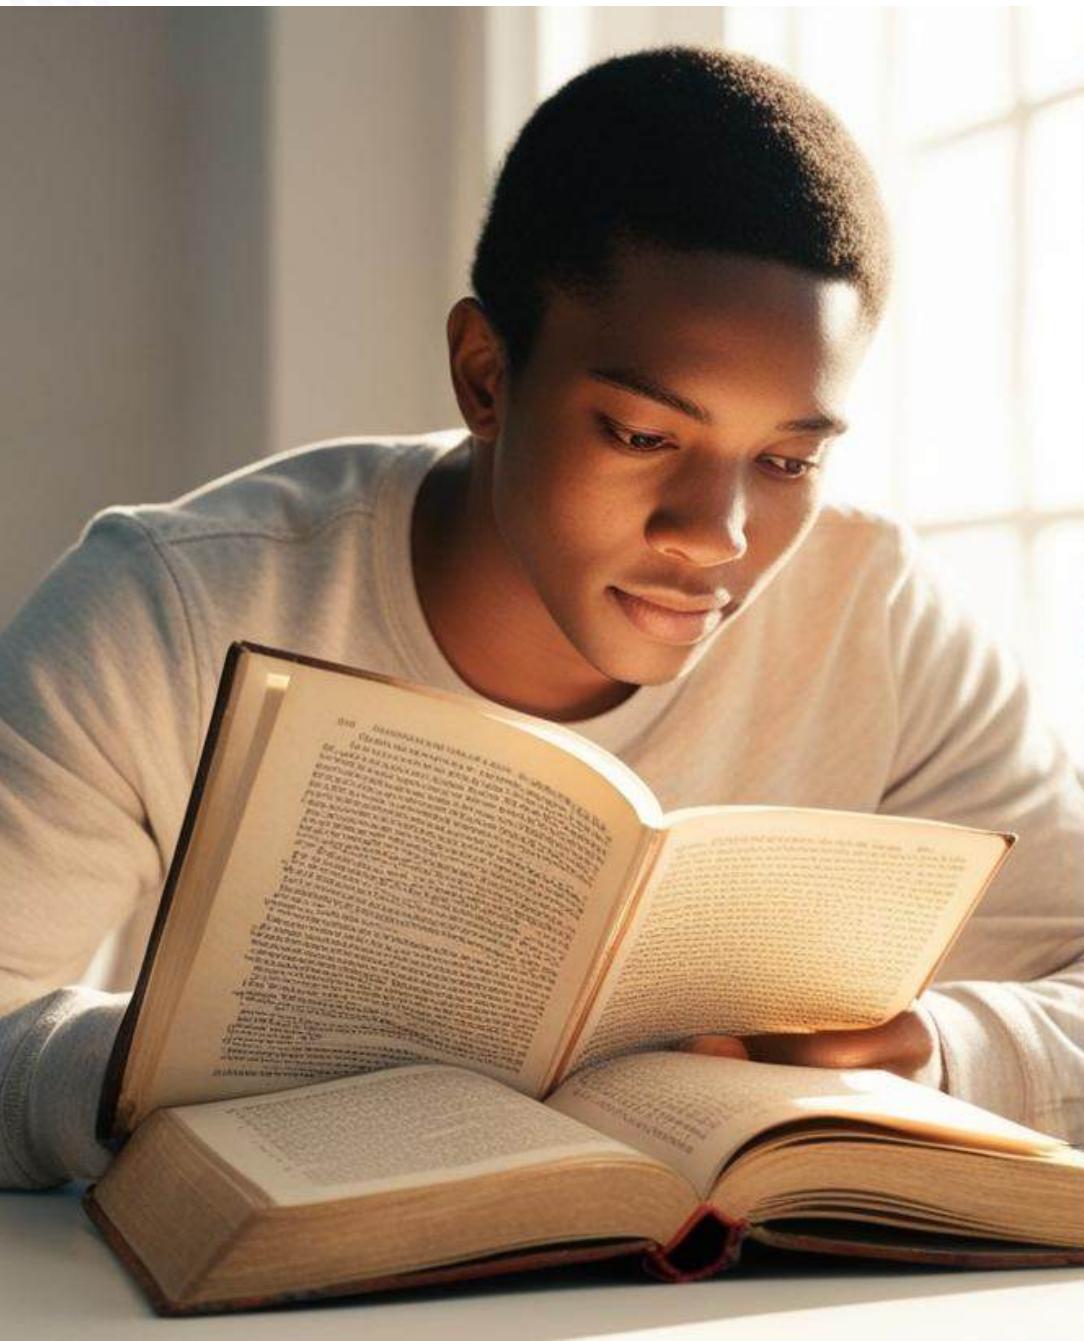

We give real project work. You learn by doing. You face real issues.

I forgot everything after a break in career.

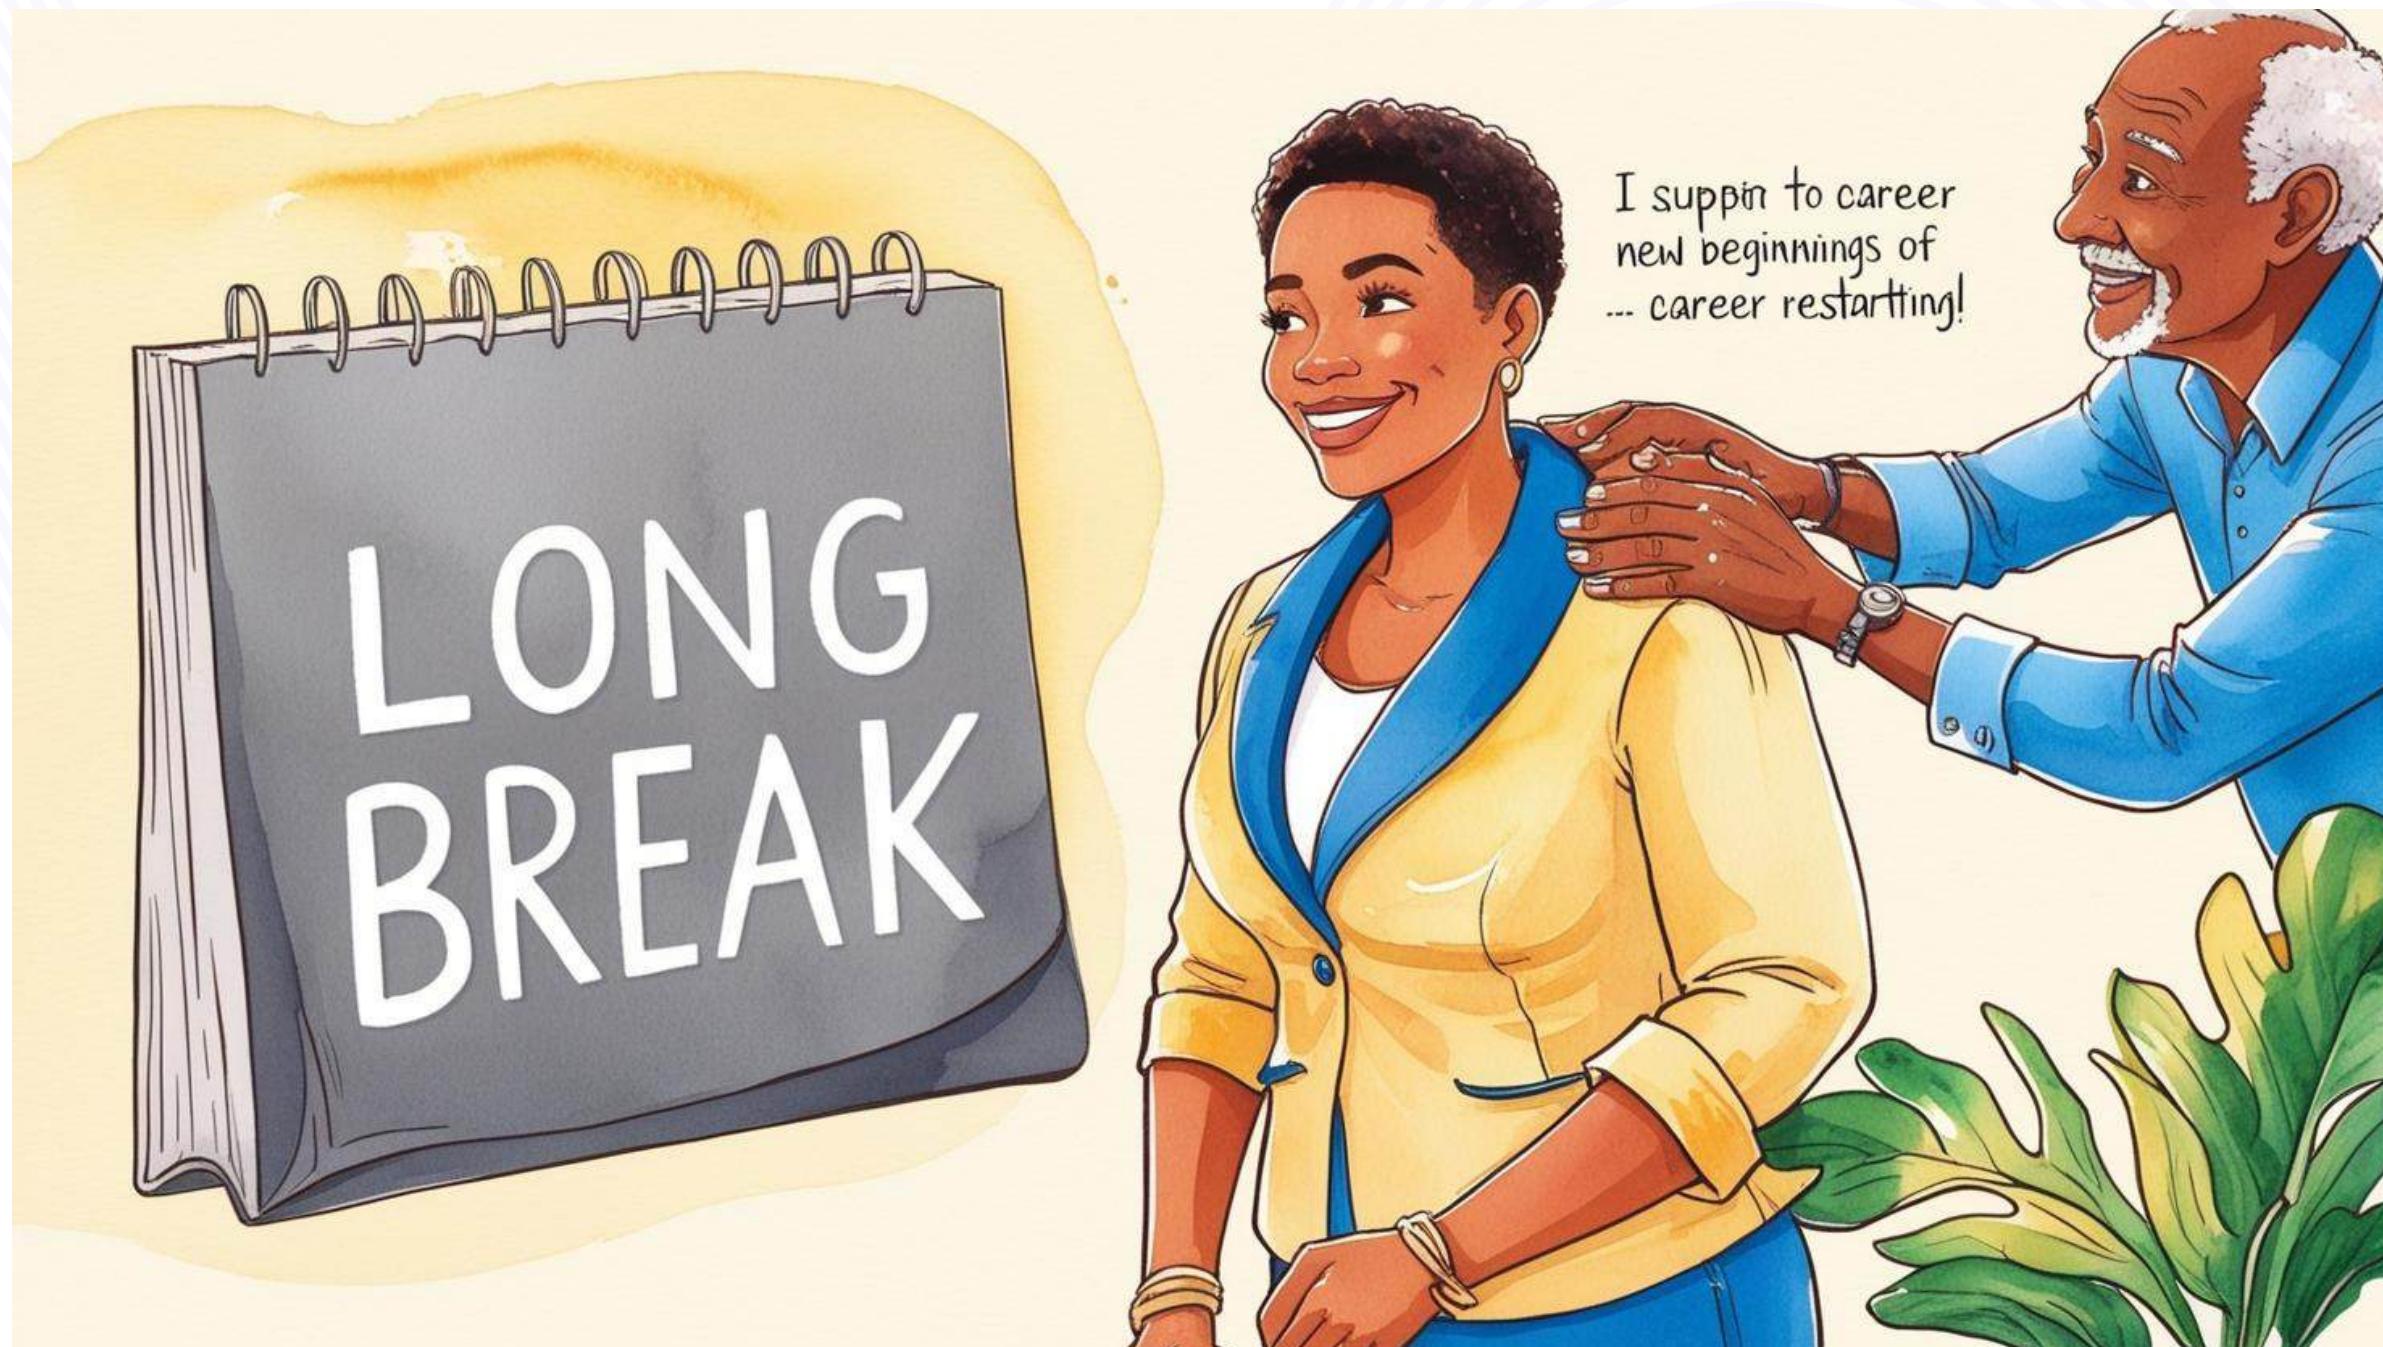

We rebuild your base. We fill gaps.
We train till you're job-ready.

I have knowledge but can't speak well in interviews.

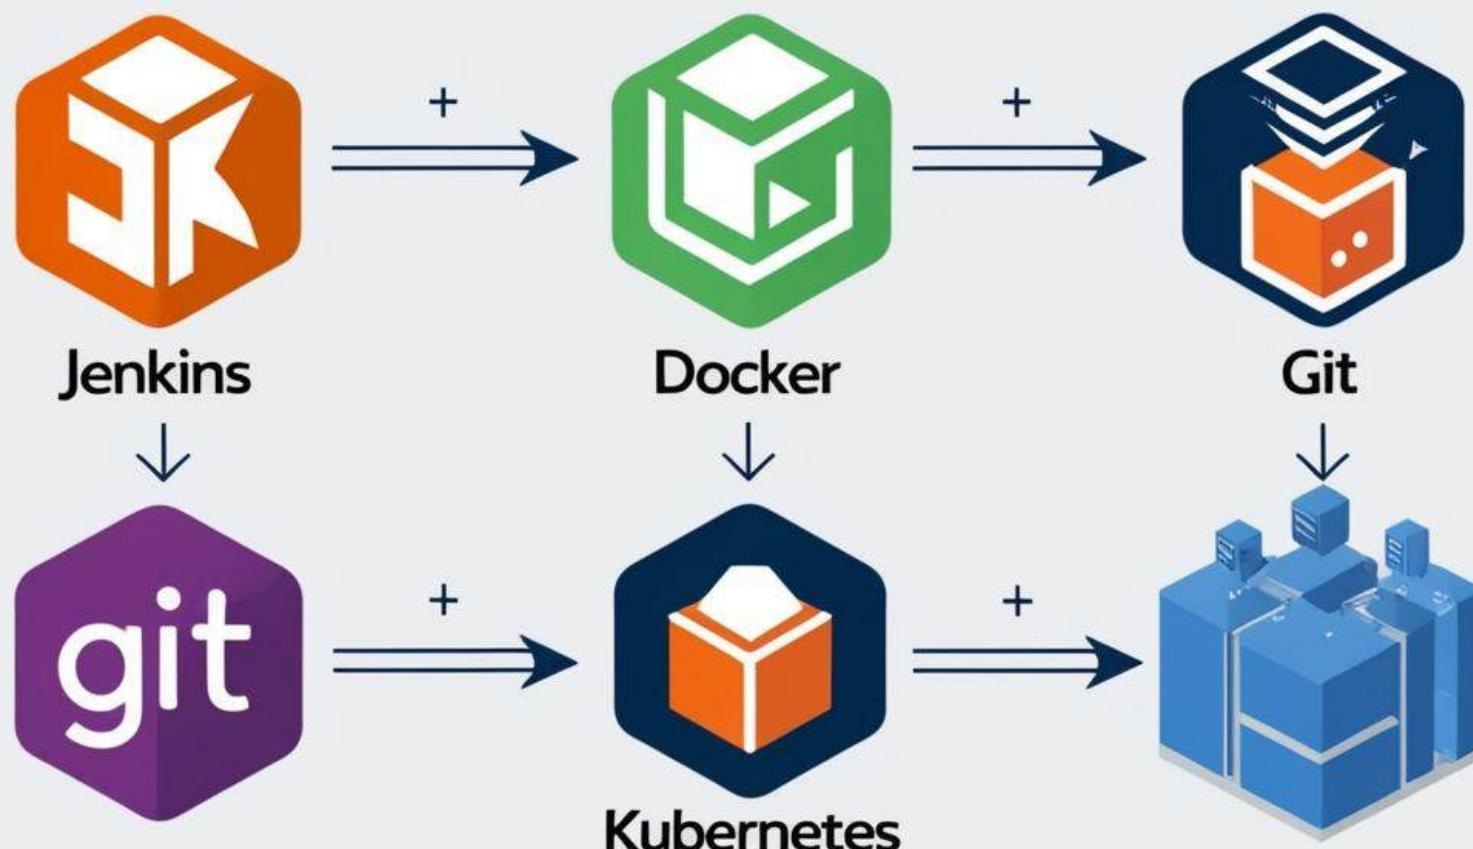

We train for interviews. Mock sessions. Feedback. You get better fast.

I don't know how tools work together in real jobs.

Inter-connected Workflox Git – as the Kubernetes

We show full project flow. You use tools in real tasks. You learn context.

I fear failure. I delay starting.

We push you to start small. You grow step-by-step. We stay with you.

I have skills but no confidence to apply for jobs.

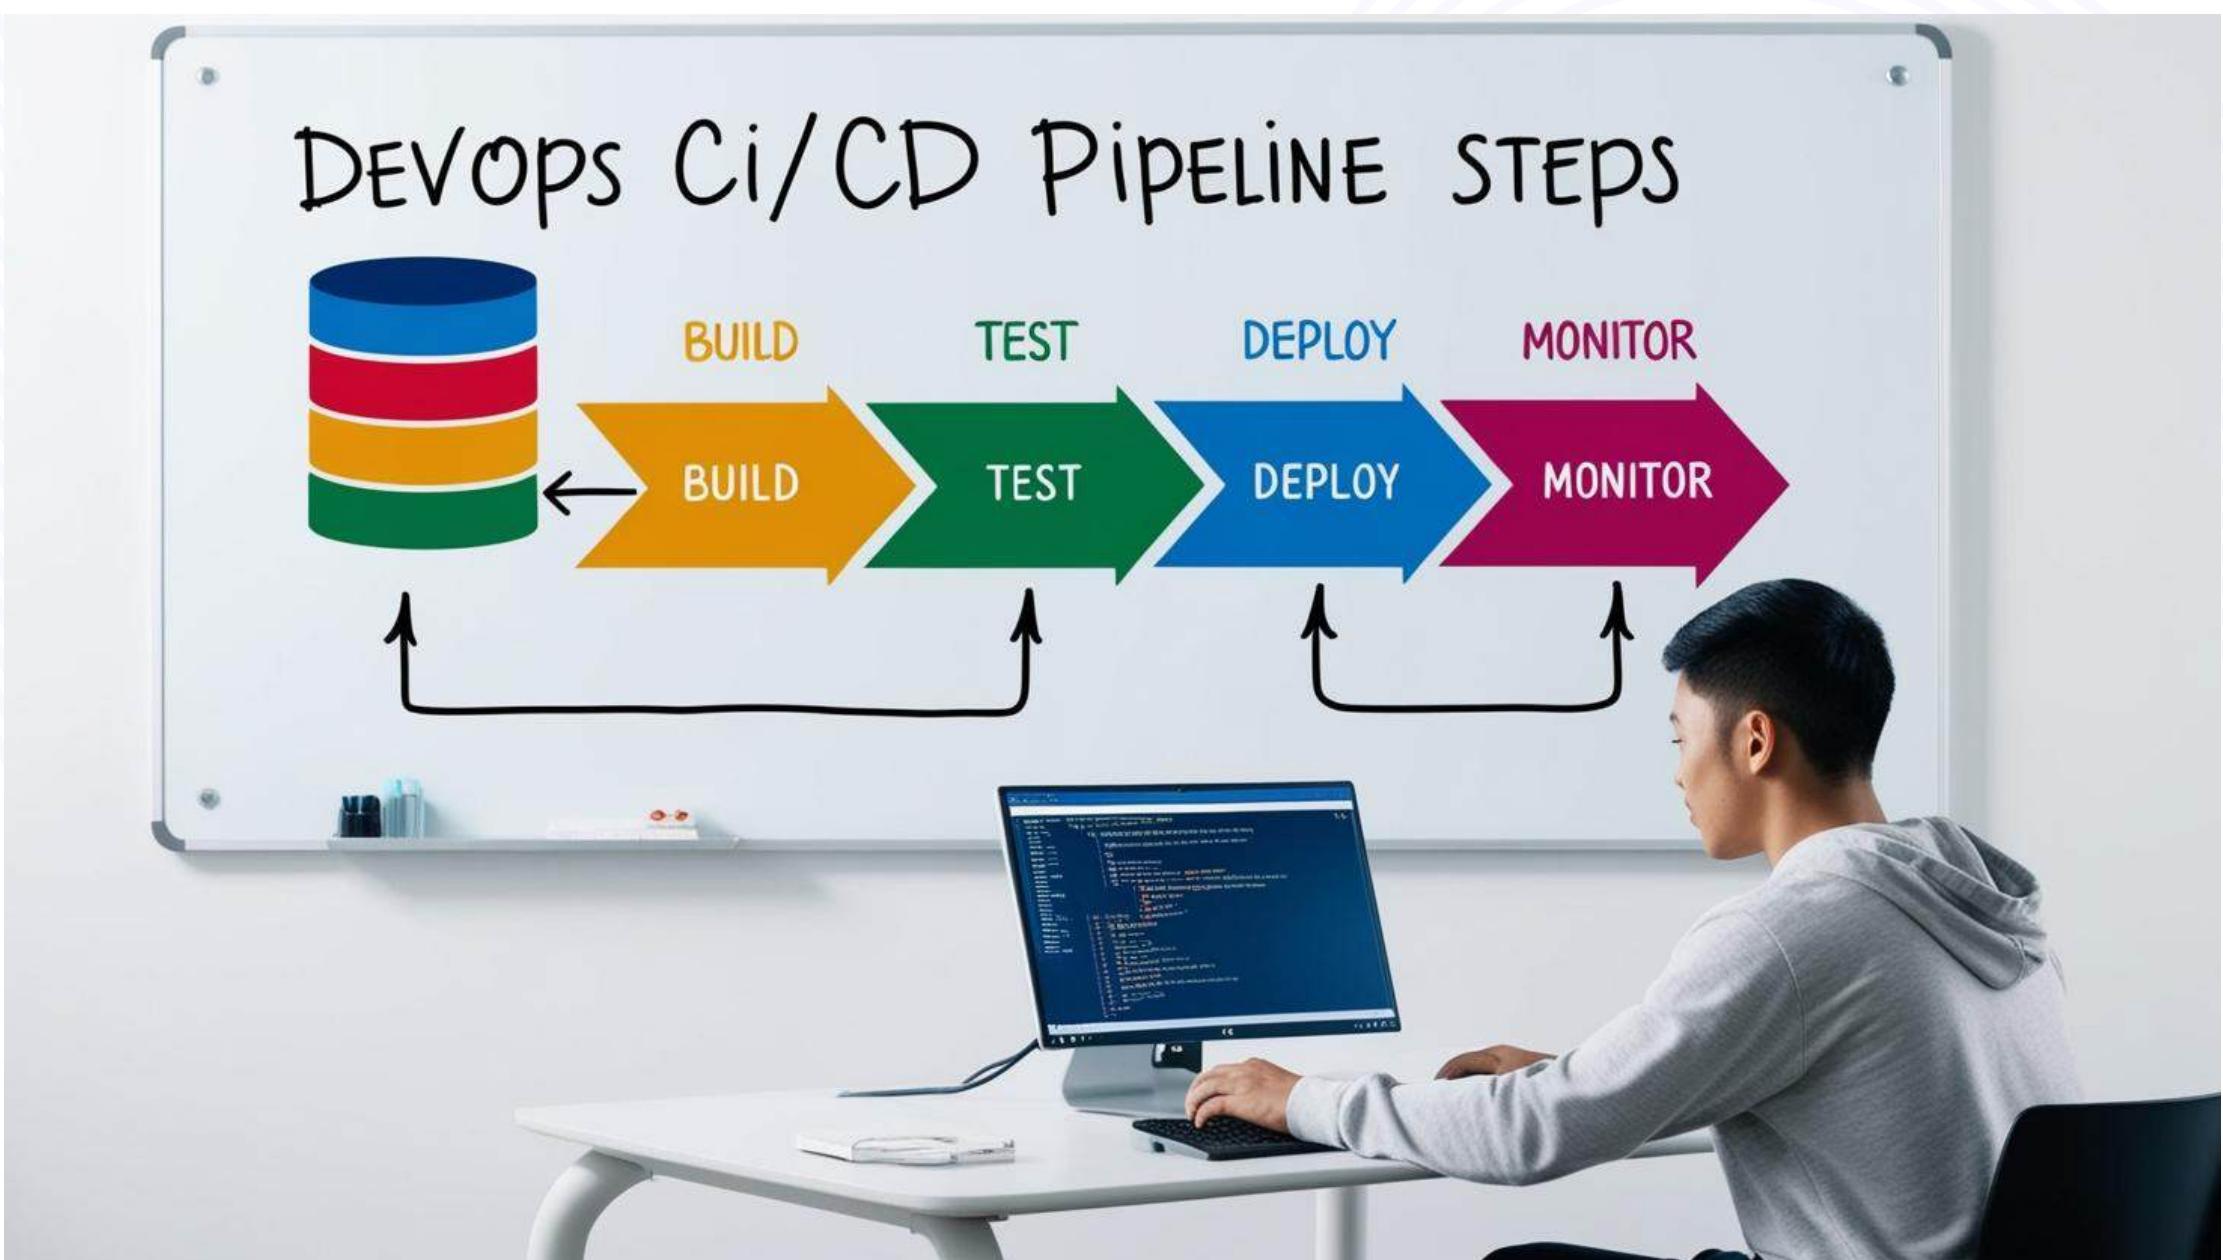

We fix your profile. We guide job search. We prepare you for real roles.

I know DevOps, but can't connect theory with practice.

We give end-to-end DevOps projects. You connect dots. You build confidence.

I only watch tutorials. I forget fast.

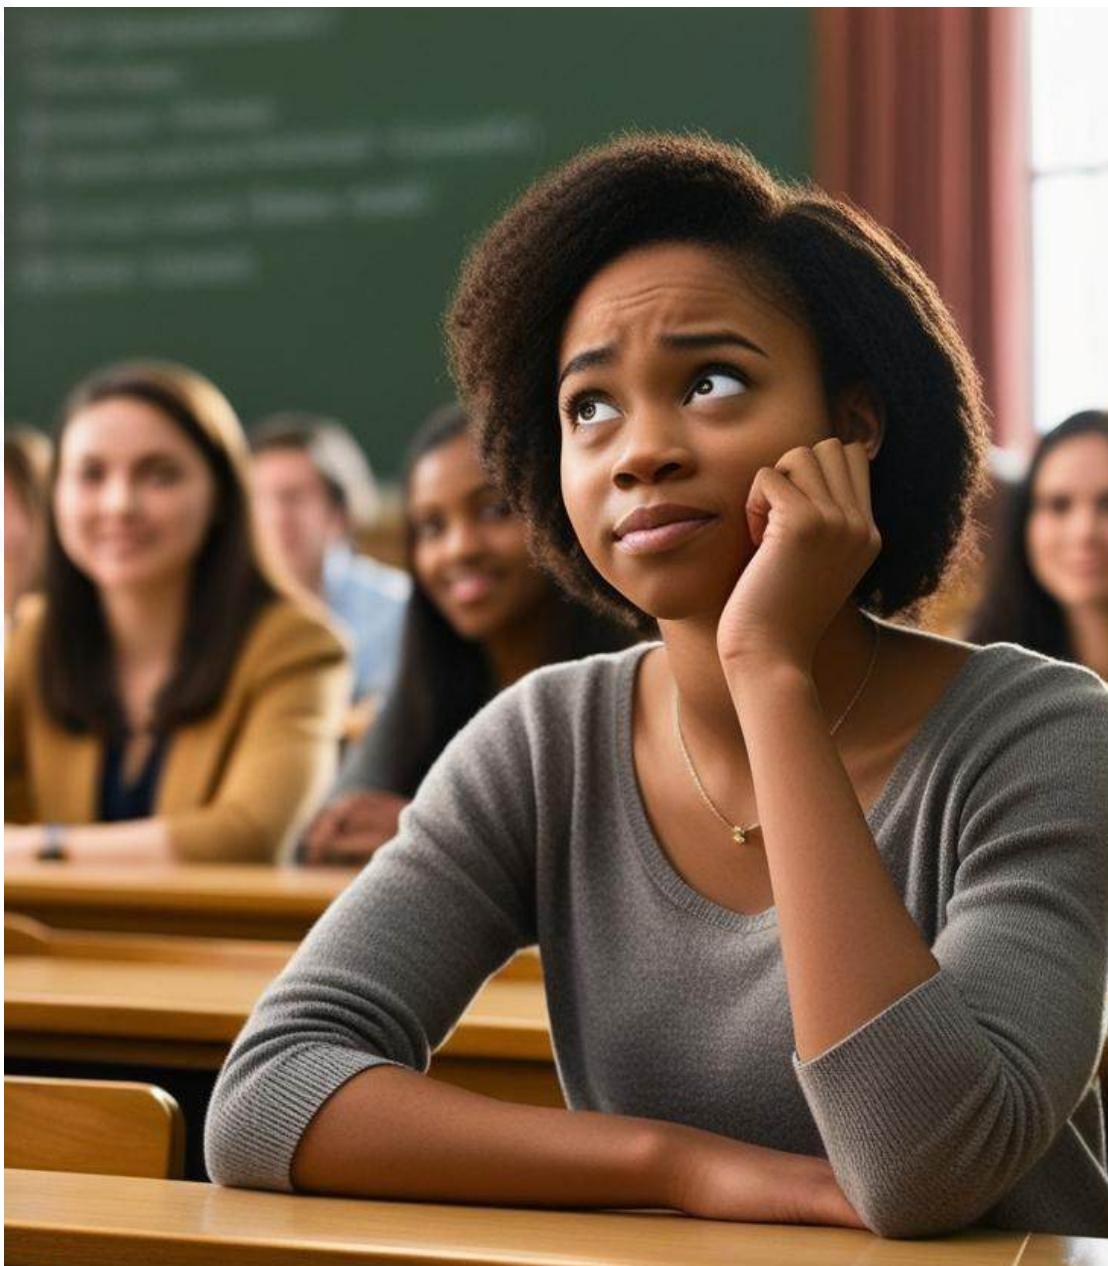

We make you do tasks. You build hands-on memory. You won't forget.

I feel shy to ask questions in class.

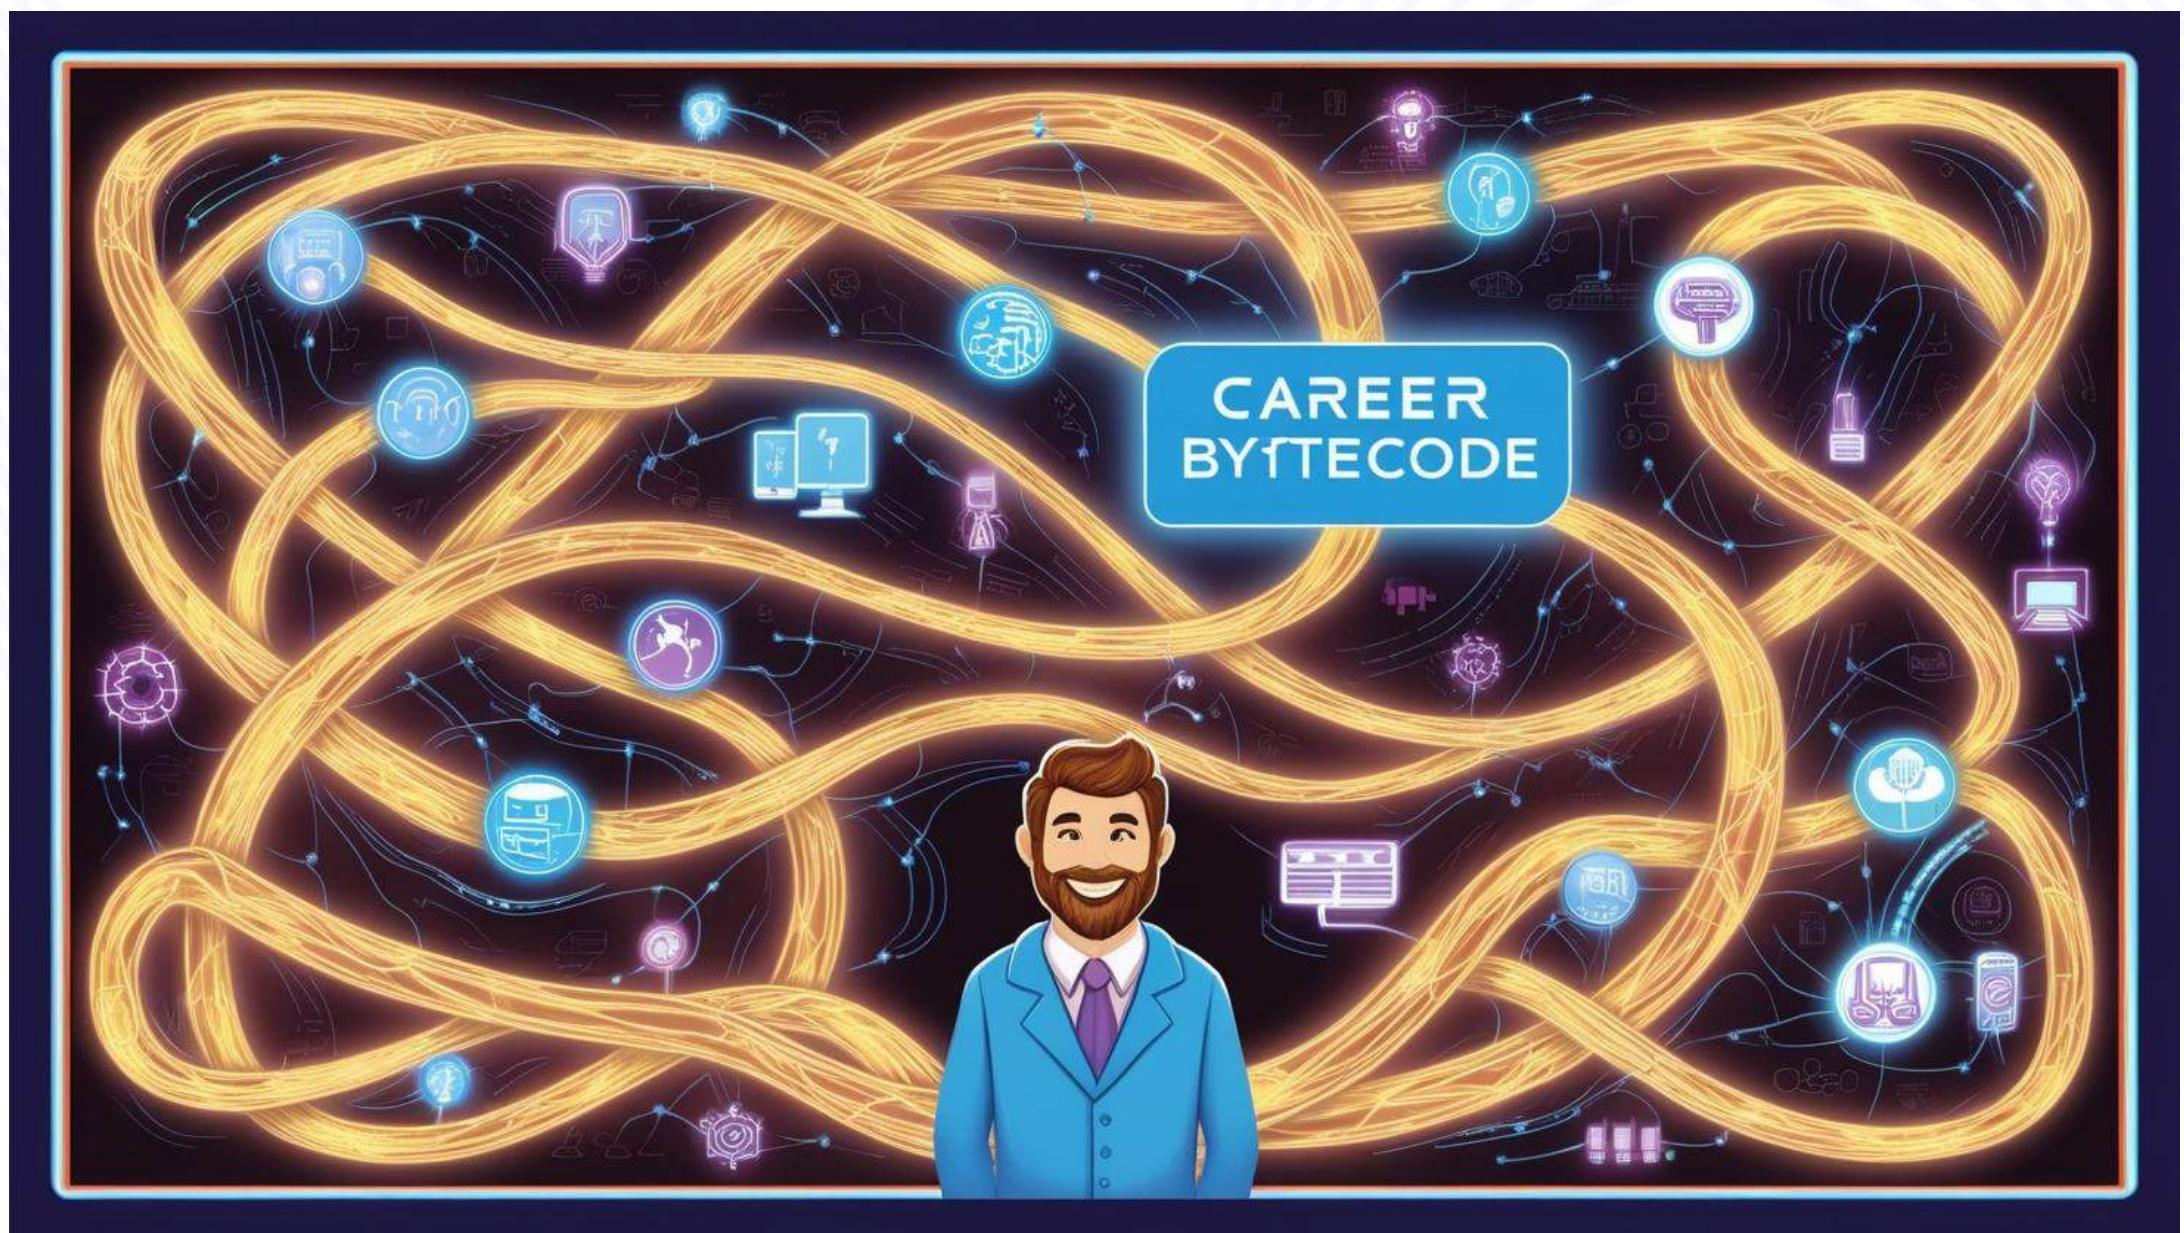

We do 1:1 calls. We answer all doubts. No pressure. Full support.

I'm confused with too many learning paths.

We give one clear roadmap. No confusion. You follow and grow.

I come from non-IT background

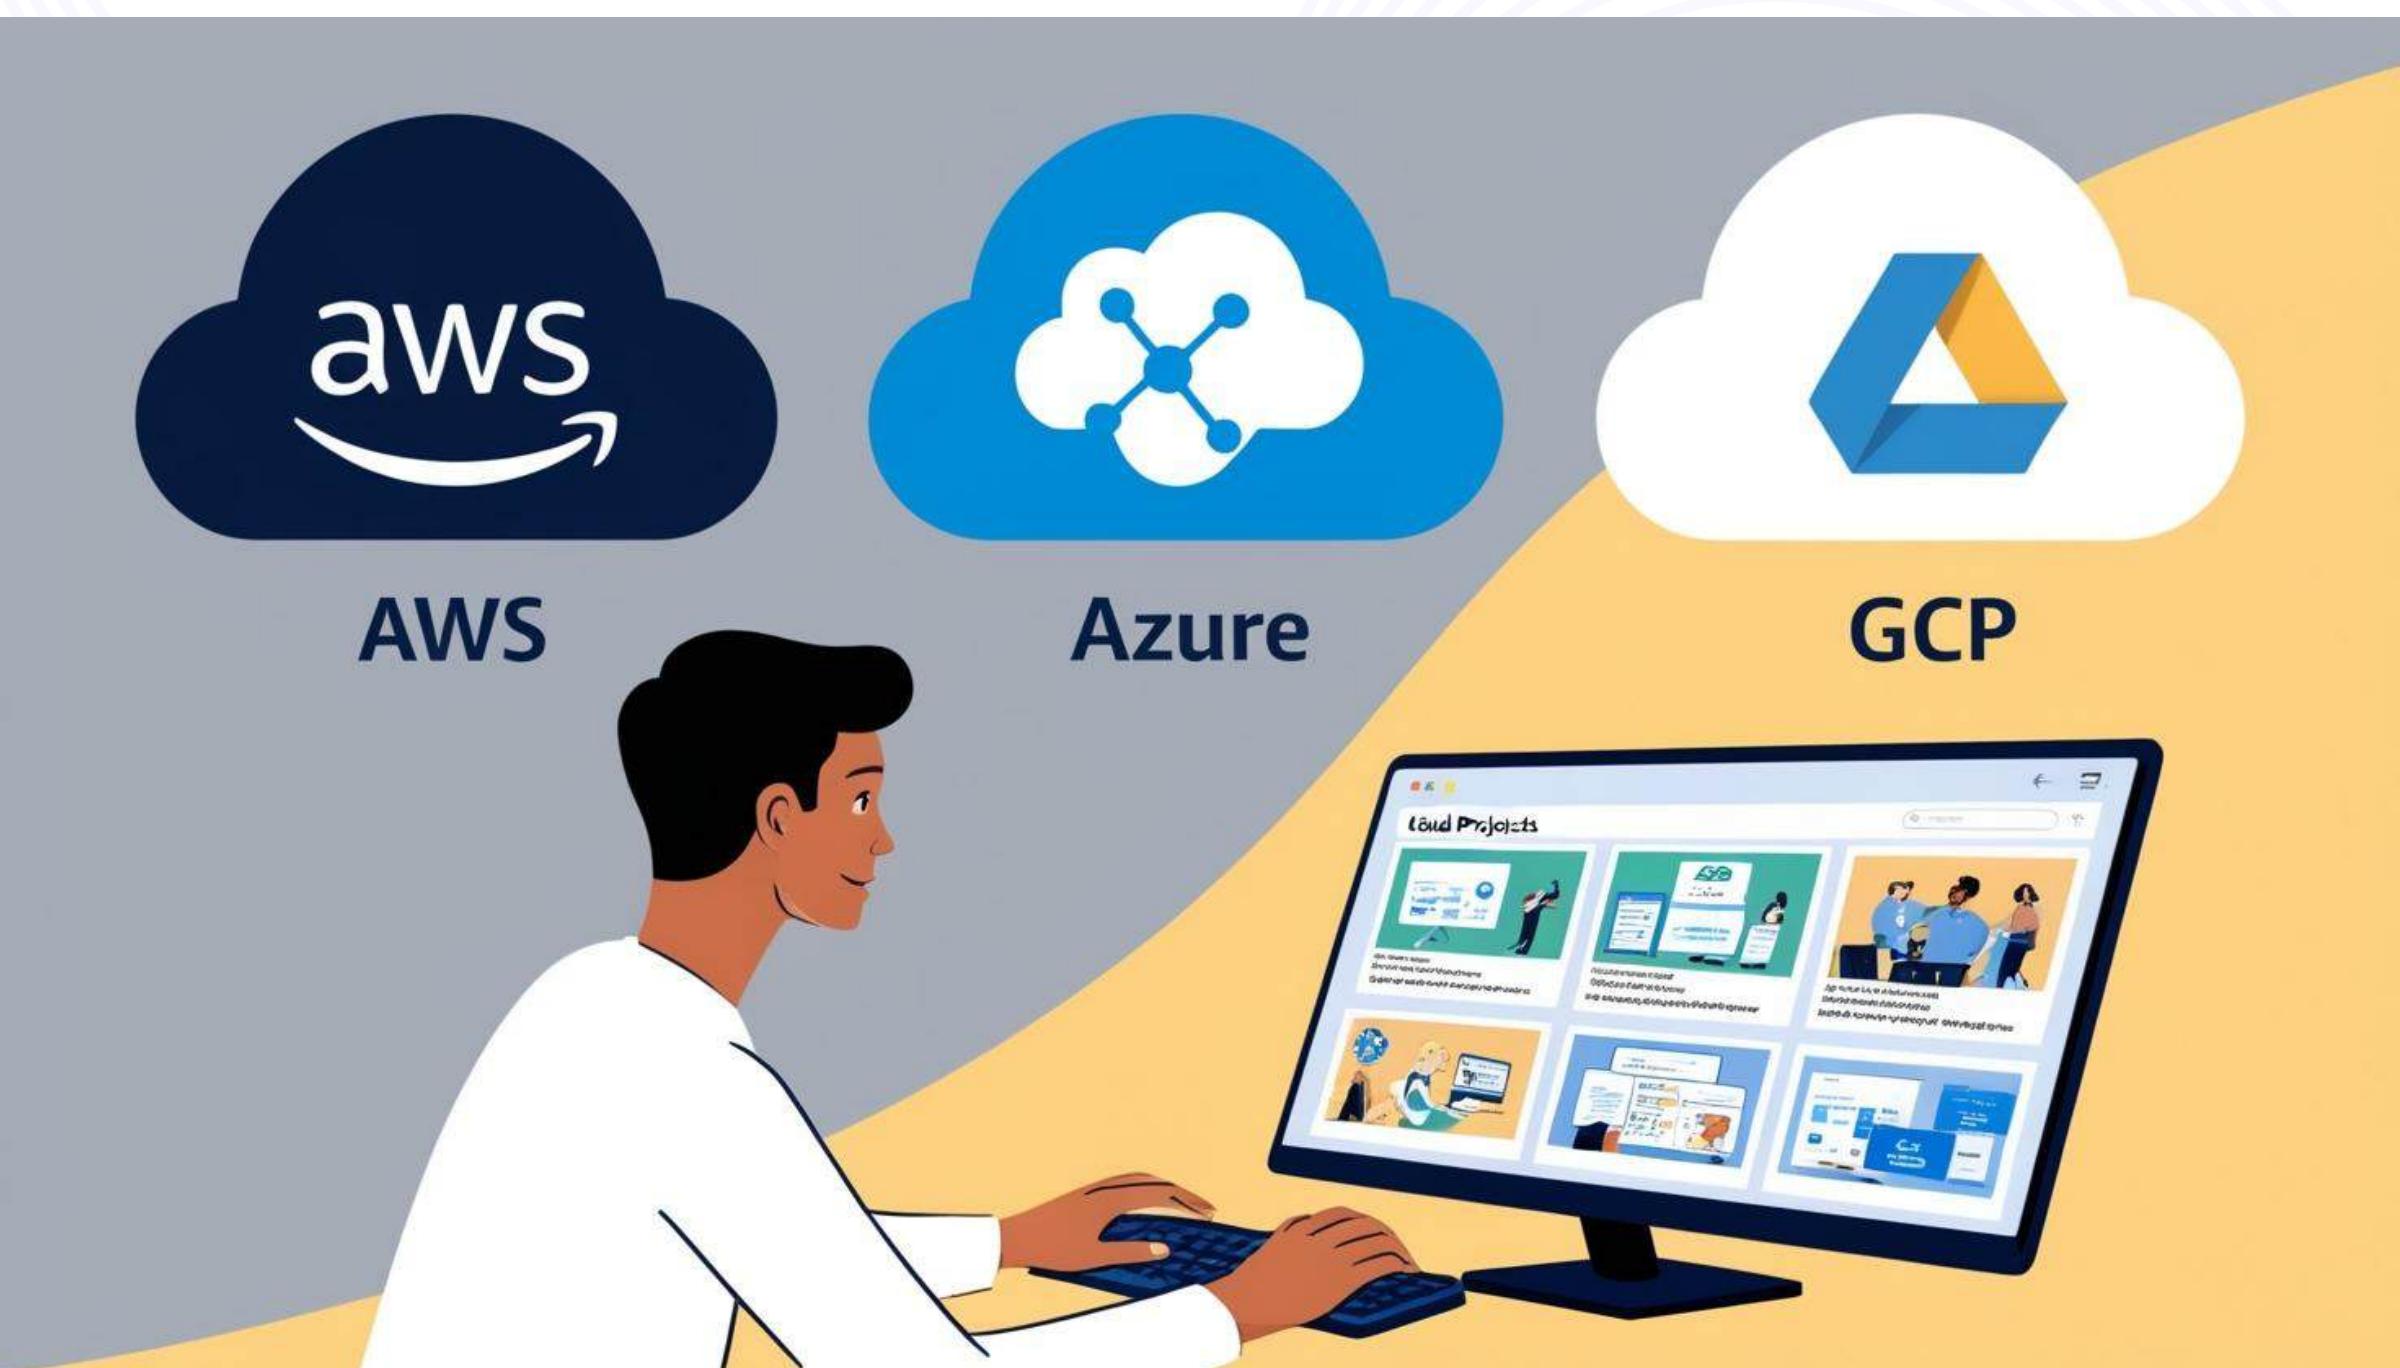

We teach from scratch. No tech terms first. Step-by-step growth.

I know only one cloud. I want DevOps knowledge.

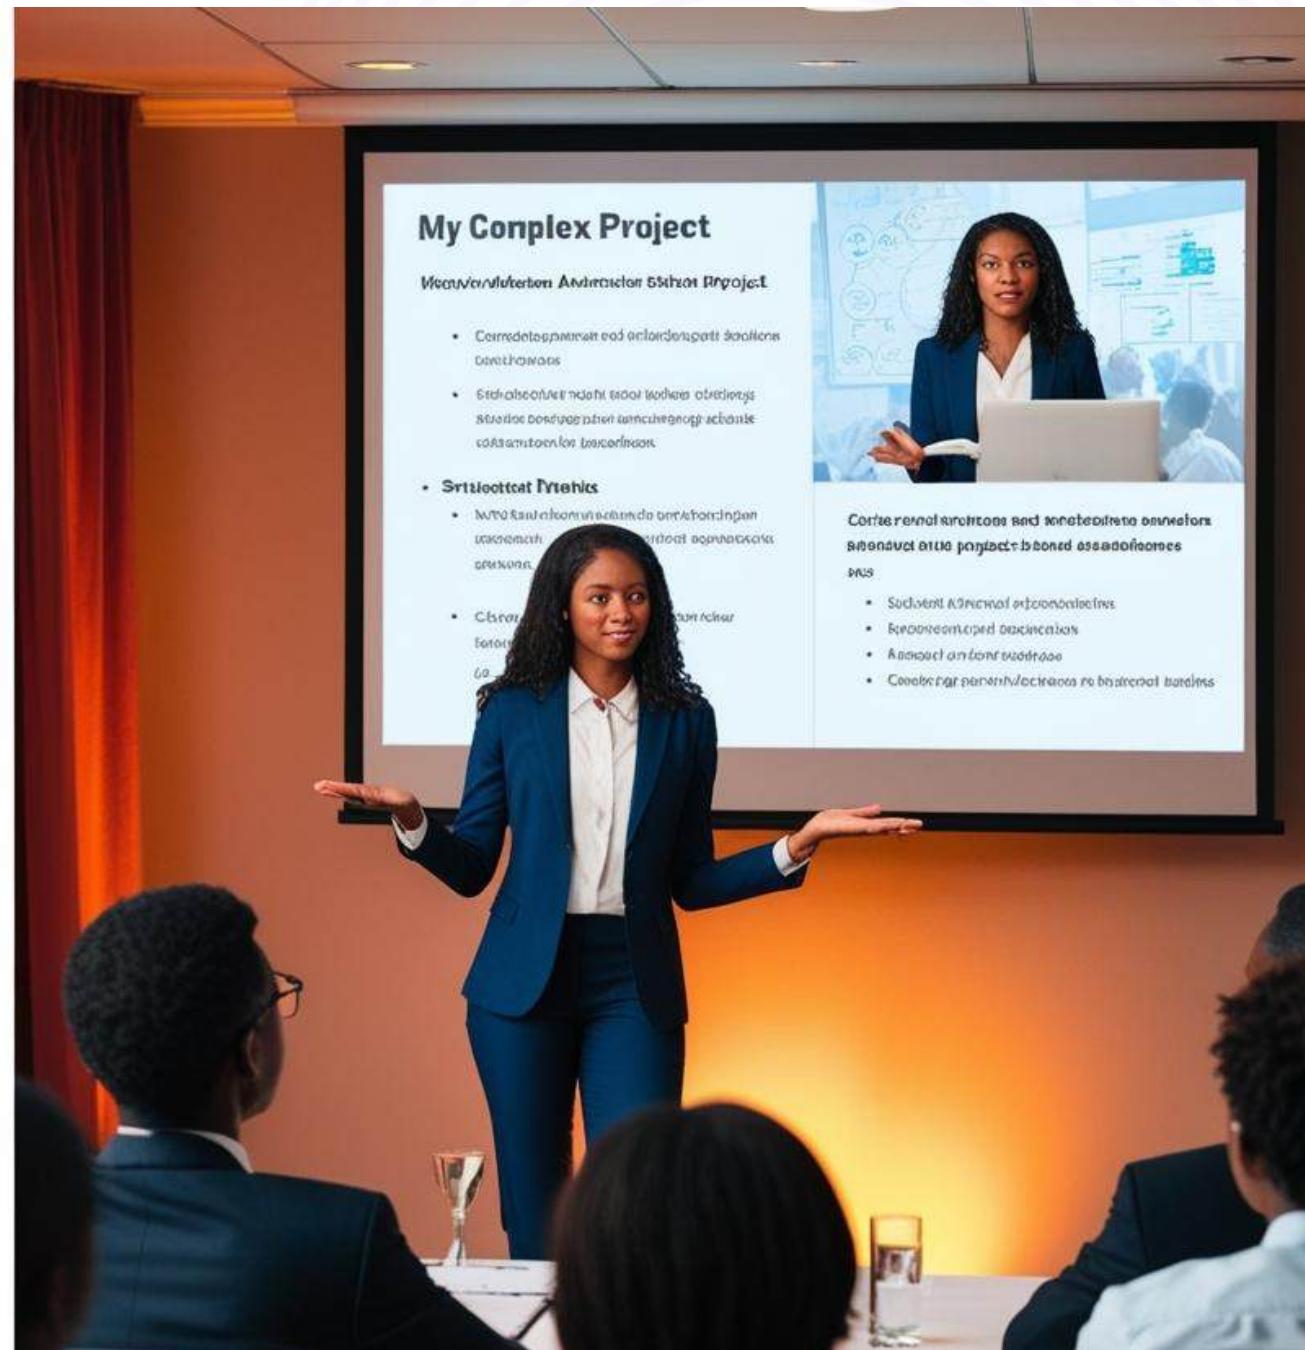

We train you in realtime devops workflow. You learn real use cases.

I learn but don't know how to explain it.

We train you to speak in interviews.
You explain with clarity.

I feel stuck in my role. No growth.

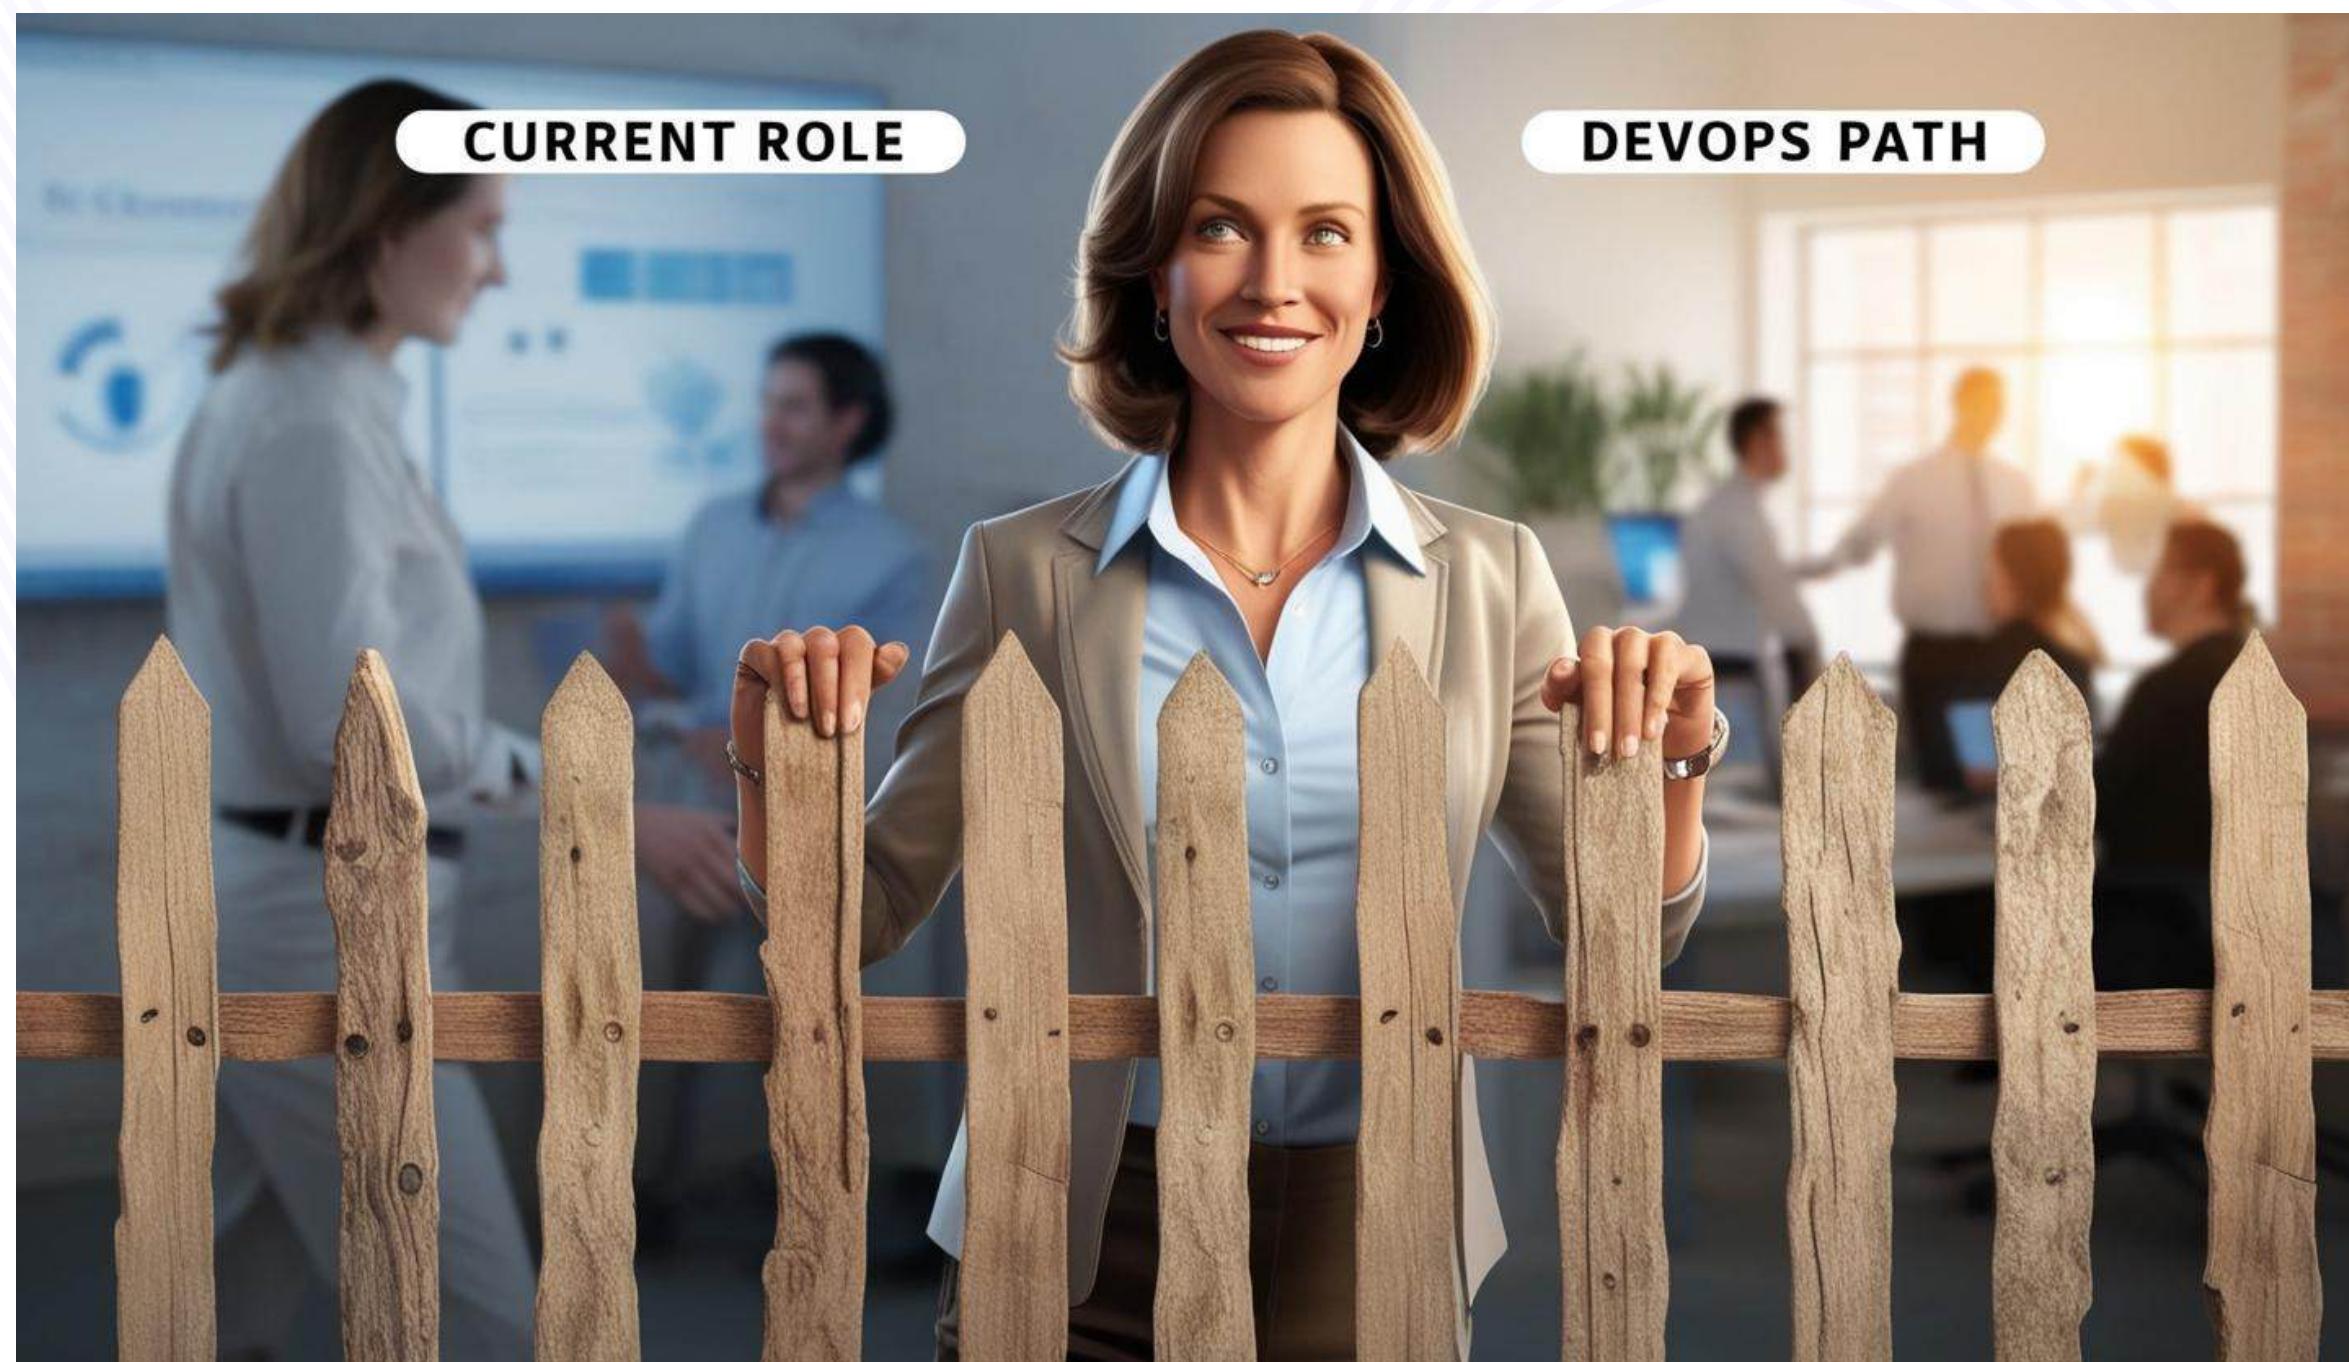

We help you reskill. You upgrade. You move to better roles.

I fear switching to DevOps from my current role.

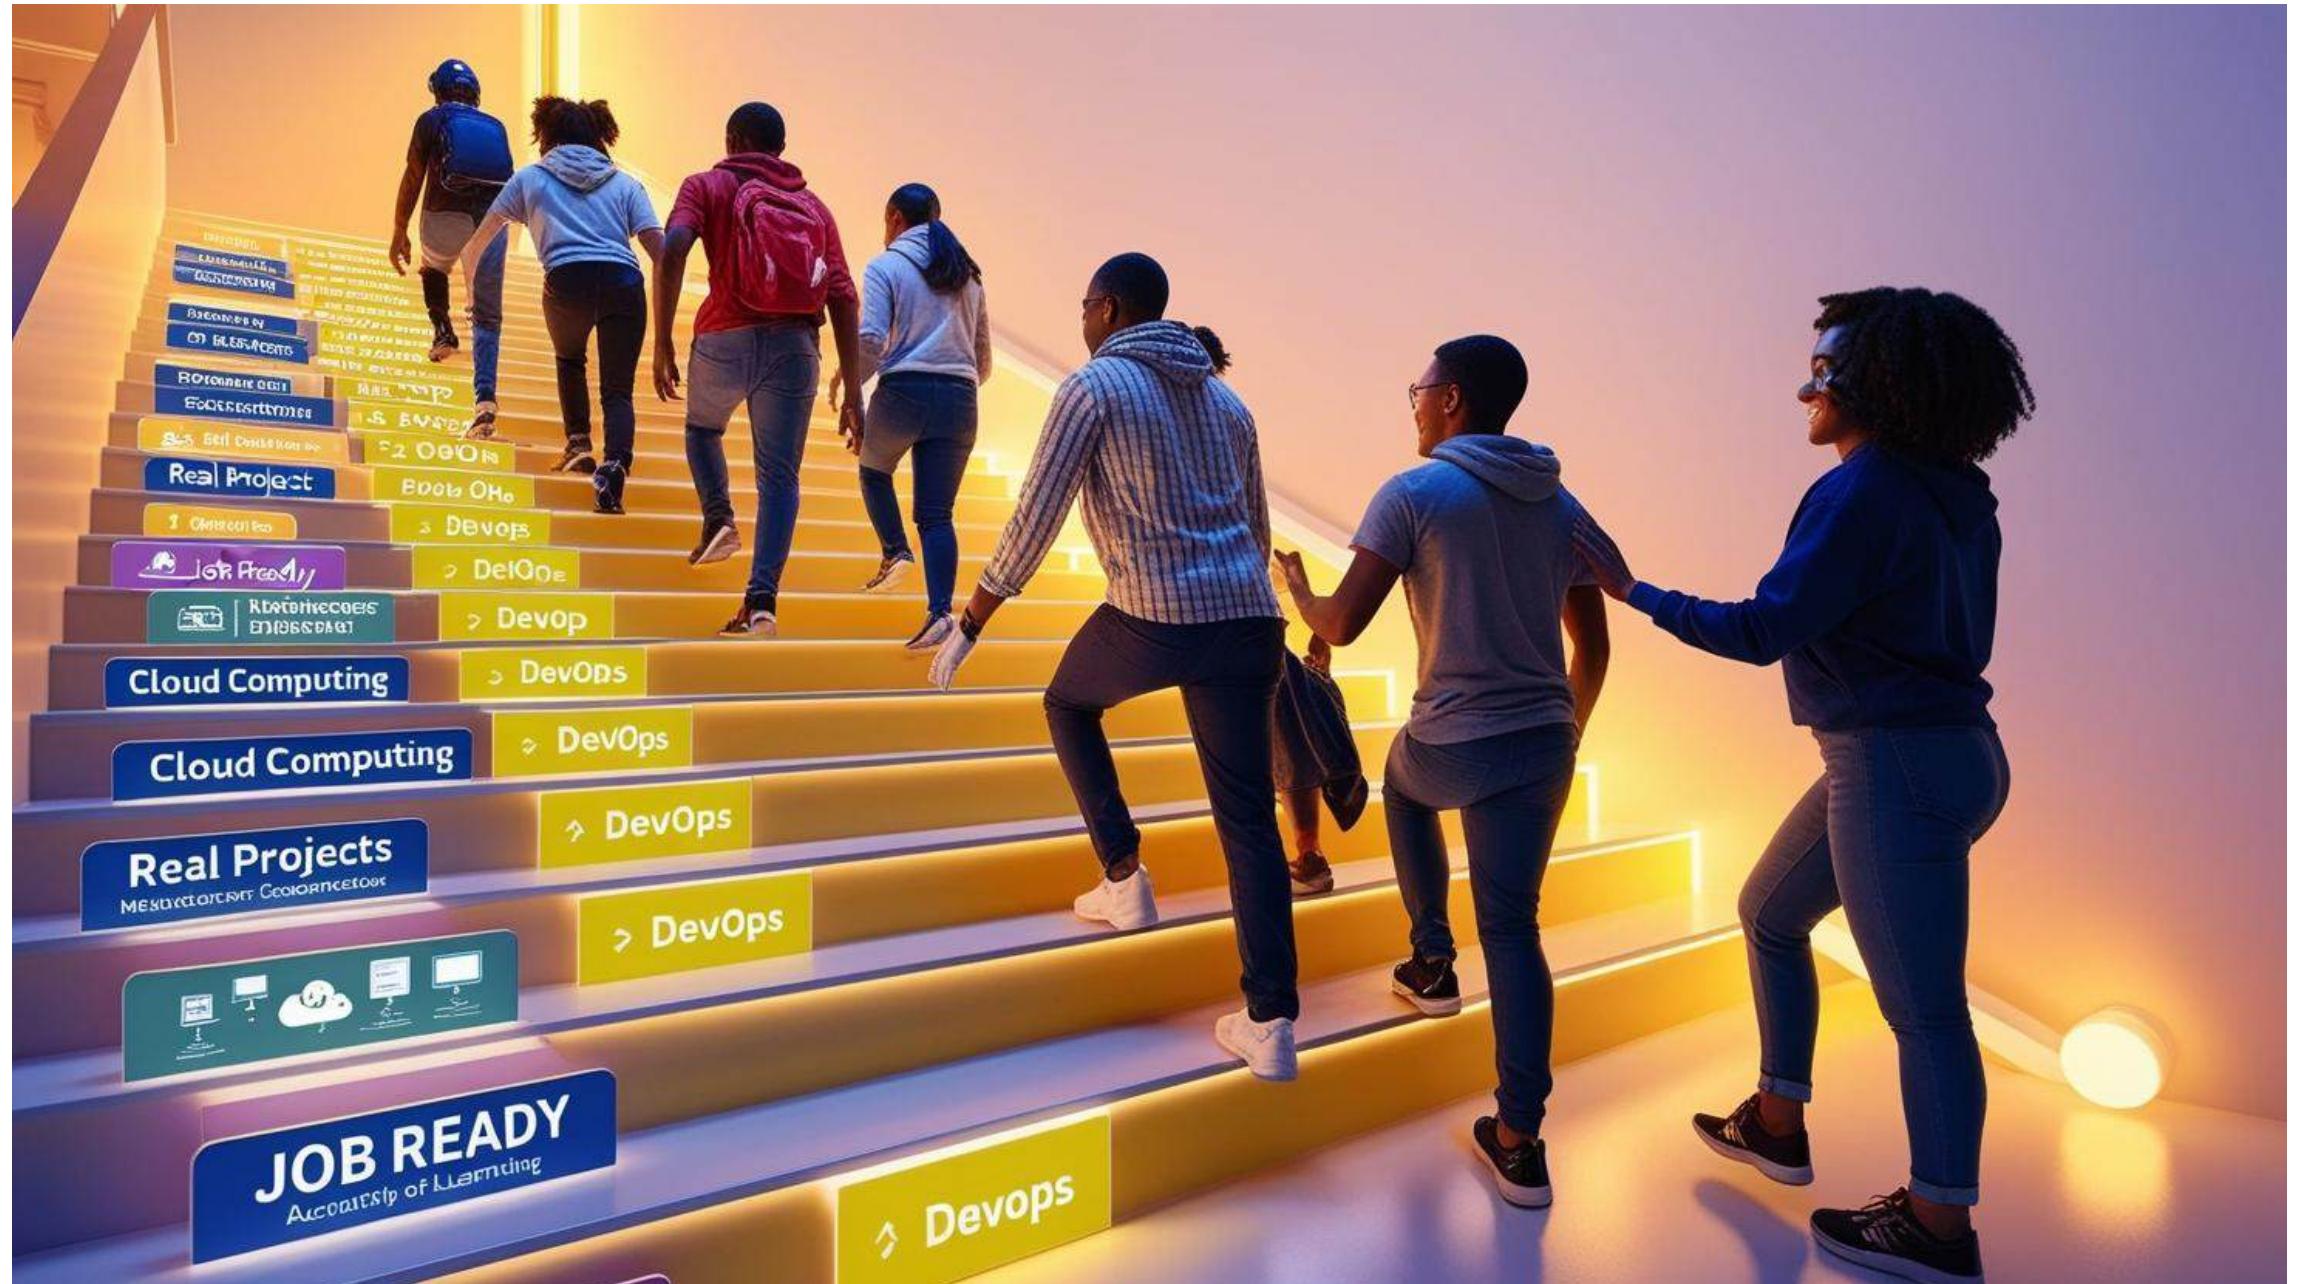

We guide the shift. We train, mentor,
and support till you switch.

We Uplift You

CareerByteCode uplifts learners with strong mentoring, real tasks, and full support.

We Uplift You

You don't walk alone. We grow
together.

REAL SUCCESS, REAL IMPACT

🚀 Exciting Career Milestone Unlocked! 🎉

Thrilled to announce that I've joined **iBridge Techsoft** today! 🔥

A huge shoutout to the **CareerByteCode** platform and the incredible Senior Architect team—your guidance has been invaluable in shaping my journey toward my dream career in Cloud & DevOps. 🤝

Special thanks to **Sangeetha B** who helped me to trigger my inner talents.

This journey has been more than just about landing a job; it's been a revelation of my own potential in this space. And now, as I step into this new role, my focus is crystal clear:

- Driving service improvements to uplift company deliverables.
- Actively mentoring aspiring professionals and helping them shape their careers.
- Continuously learning, evolving, and sharing my expertise to uplift the DevOps & Cloud community.

This is just the beginning of an even bigger mission!💡

One of the biggest lessons I've learned in this journey: Even if we have 100+ skills, if we don't know how to sell them, it's a waste of time.💡 And that's exactly what **CareerByteCode**, **Sangeetha B**, and the Senior Architect team are triggering in so many lives—helping professionals not just learn, but showcase and apply their expertise effectively!

If you're on a similar path or need guidance, let's connect, grow, and win together!🚀

Gayathri Muthukumarasamy Thank you for your incredible mentorship and unwavering passion! In today's competitive IT landscape, many professionals find themselves at a standstill, lacking the hands-on experience and expert guidance needed to truly excel. Your commitment to providing real-time knowledge and mentorship is a game-changer, helping them build the skills and confidence they need to thrive. By empowering others with the right tools, insights, and opportunities, you're not just shaping careers.

you're transforming lives. Let's continue to lead the way, providing the support and guidance that helps these talented individuals break through barriers and unlock their full potential!

2mo ...

I'm very happy to say that I took my first step this year. For the first time, I truly feel like a leader.

Looking ahead to 2025, I'm excited to welcome new opportunities and challenges as a leader. Now, I have a clear goal.

First and foremost, I want to thank my mentor, who has been my backbone throughout this journey.

Every day, he pushes me forward and encourages me to think like a leader. His constant motivation and support mean a lot to me.

I am truly grateful to the universe for bringing such a mentor into my life.

We will win as a team 😊

Anitha Rajesh Thank you for your exceptional mentorship and unwavering dedication to uplifting others!

In today's fast-paced IT world, countless professionals are struggling to advance due to a lack of real-world experience and the proper guidance to navigate their careers.

Your efforts are not just helping individuals overcome these challenges but are also shaping the next generation of skilled professionals.

Let's continue this incredible journey of empowering others, bridging the gap between potential and success, and inspiring meaningful growth in the industry!

"I am immensely grateful and profoundly appreciative for this opportunity and the support extended to me. It's an honor to engage with such talented professionals and be part of a community that values innovation and growth. Your acknowledgment is truly humbling and inspires me to continue striving for excellence in all that I do. Thank you for your trust and encouragement—it fuels my passion to contribute meaningfully and achieve even greater milestones. I deeply value this recognition and look forward to building impactful connections.
